Transforming How You Do Business With Visual Communications

Nicolas Domeyko Director, Telepresence and UC Asia Pacific

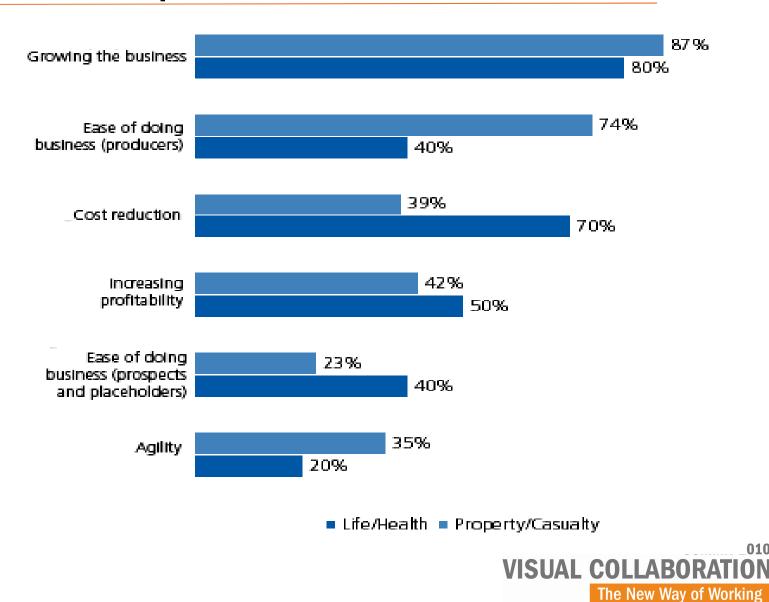

Global growth is driving business needs

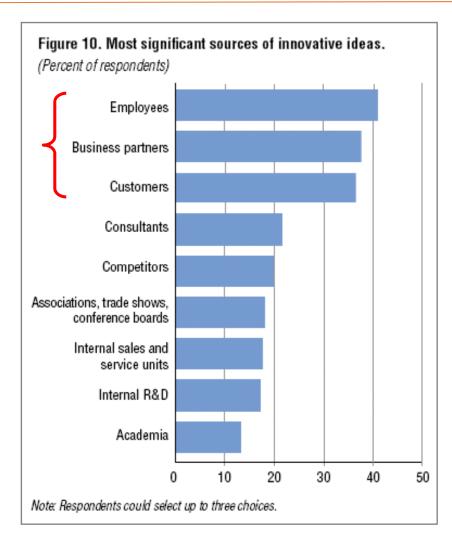

Top business issues IT will support in 2010 – Life Insurance example

What is needed to overcome those business issues?

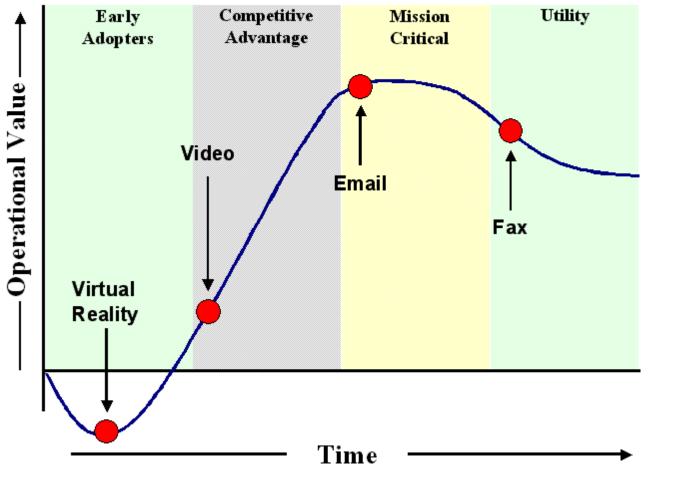

- Improve decision making
- Improve clarity around mission and goals to staff and stakeholders
- Deepen customer relationships
- Compress global markets
- Develop value-added services
- Disseminate information real-time

Video is still at the beginning stage of business impact

However, ideal conditions are in place for video communications

We see four key trends emerging in 2010

1. Need for connectivity beyond our building

"I need to [visually] connect with colleagues, customers and partners"

2. Need for interoperability

"I want my stuff to work regardless of who I need to call!"

3. Need for infrastructure

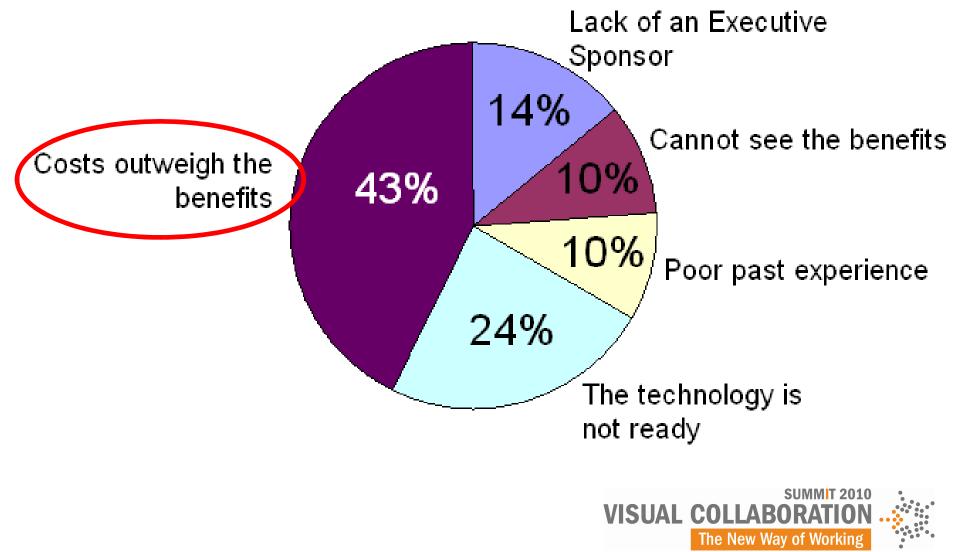

"Do I have the right solutions in place to do what I need to do?"

4. Need for carbon reduction

"Using green friendly technologies to reduce our carbon footprint"

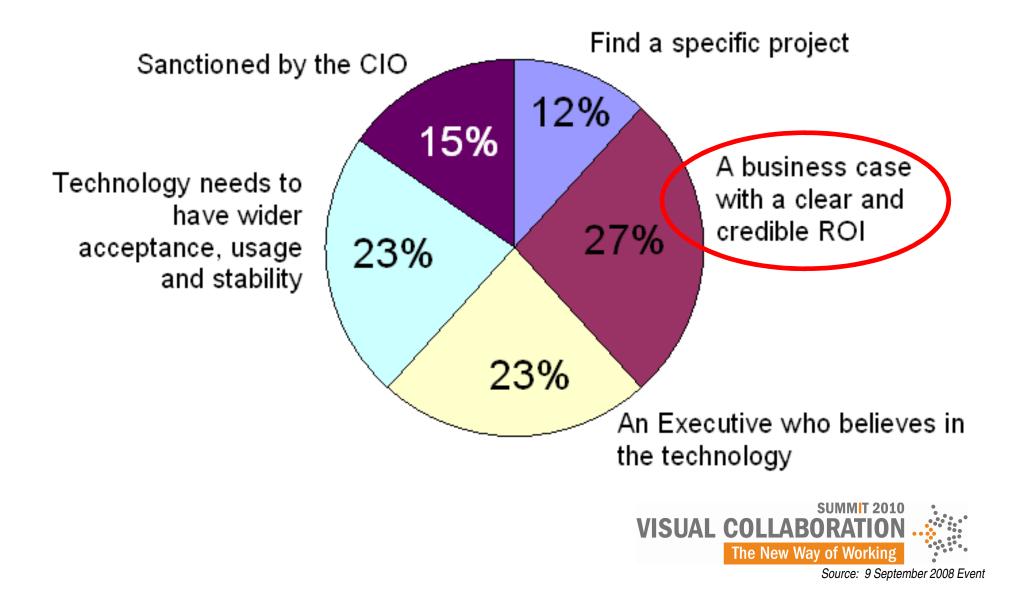

Why hasn't videoconferencing become more widely adopted within <u>your</u> organization?

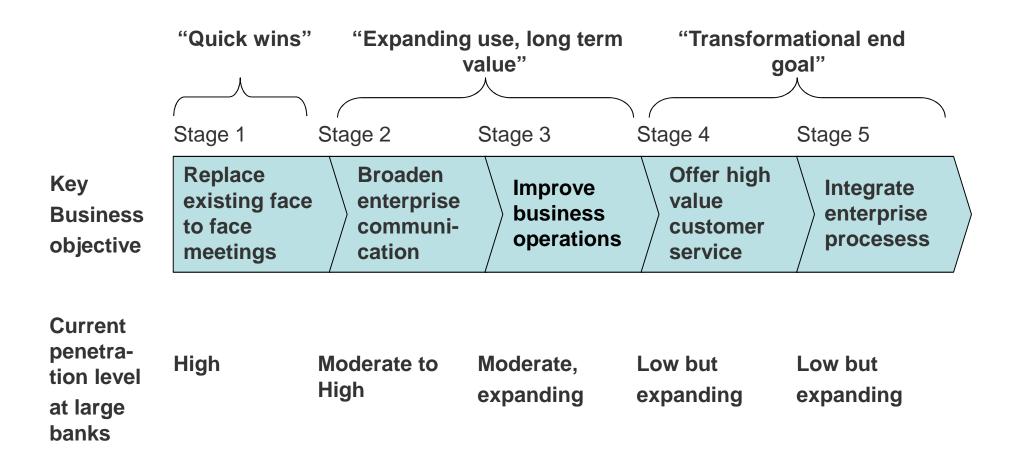

Source: 9 September 2008 Event

If videoconferencing were to be broadly adopted within your organization, what would need to happen first?

What is a typical adoption roadmap within an organization? Financial industry example

What are the benefits that video users are realizing?

Transform your organization

Improve speed of decision making

Be green

Access experts or employees in remote locations more easily

Reduce travel expenses

Unify the organization

Improve work/life balance and higher employee retention
