É o momento
de fazer crescer
o nosso valor.

A CONVEX é uma das
empresas líderes em Portugal
no desenvolvimento de serviços
e soluções em Tecnologias
de Informação e Comunicações.

Com 20 anos de experiência
na implementação de soluções
de networking e comunicações IP,
e com um vasto portefólio de
serviços/soluções na área das TIC,
a CONVEX orienta a sua actividade
para a implementação de turn-key
projects e desenvolvimento de
aplicações customizáveis, ajudando
os seus Clientes a alcançar
ambiciosos objectivos
de negócio.

TIGER XML GUEST SERVICES

TIGER XML GUEST SERVICES is a generic, single module application specifically designed for the hospitality industry and the IP Phones with high resolution colour screens.

TIGER XML GUEST SERVICES provides the guest with a series of services at the touch of a button which are fully customisable and adaptable on a per customer basis.

The services and level of integration from **TIGER XML GUEST SERVICES** may differ depending on the systems in use at the hotel property.

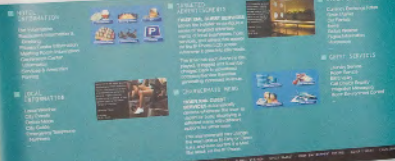

Hotel Information to inform the guests of the available services and facilities at your hotel.

Local Information to provide information about the weather, city events and others.

Room Services to allow the guest to access a list of available room services and request these services.

Integrated Messaging for the guest to be able to send emails and faxes from his room without a PC.

Targeted Advertisements to generate ad based revenue and achieve a better ROI.

TIGER VOICE NETWORK SECURITY

Fraudulent activity on company telephone networks is costly and on the increase. As a result, companies are looking for a pro-active management tool to give immediate notification of potentially damaging situations which could have serious financial implications and impact on network resources.

TIGER'S VOICE NETWORK SECURITY does this by:

DETECTION OF toll fraud, network hacking & other security breaches ensuring a rapid response to any incident where cost savings & network resources are at risk.

CALL ALERT functionality to alert internal & external personnel to a particular call event which may, for example, initiate a Major Incident Procedure.

AUTOMATIC IDENTIFICATION of exceptional calls based on a wide range of selection criteria.

TRACING of malicious calls & internal system abuses.

CONTINUOUS MONITORING of network call traffic 24/7 with self diagnostics to prevent unauthorised interventions.
