Cisco Enterprise Video Strategy

Delivering an Intelligent, Converged Environment for Video

Addressing Customer Challenges & Opportunities

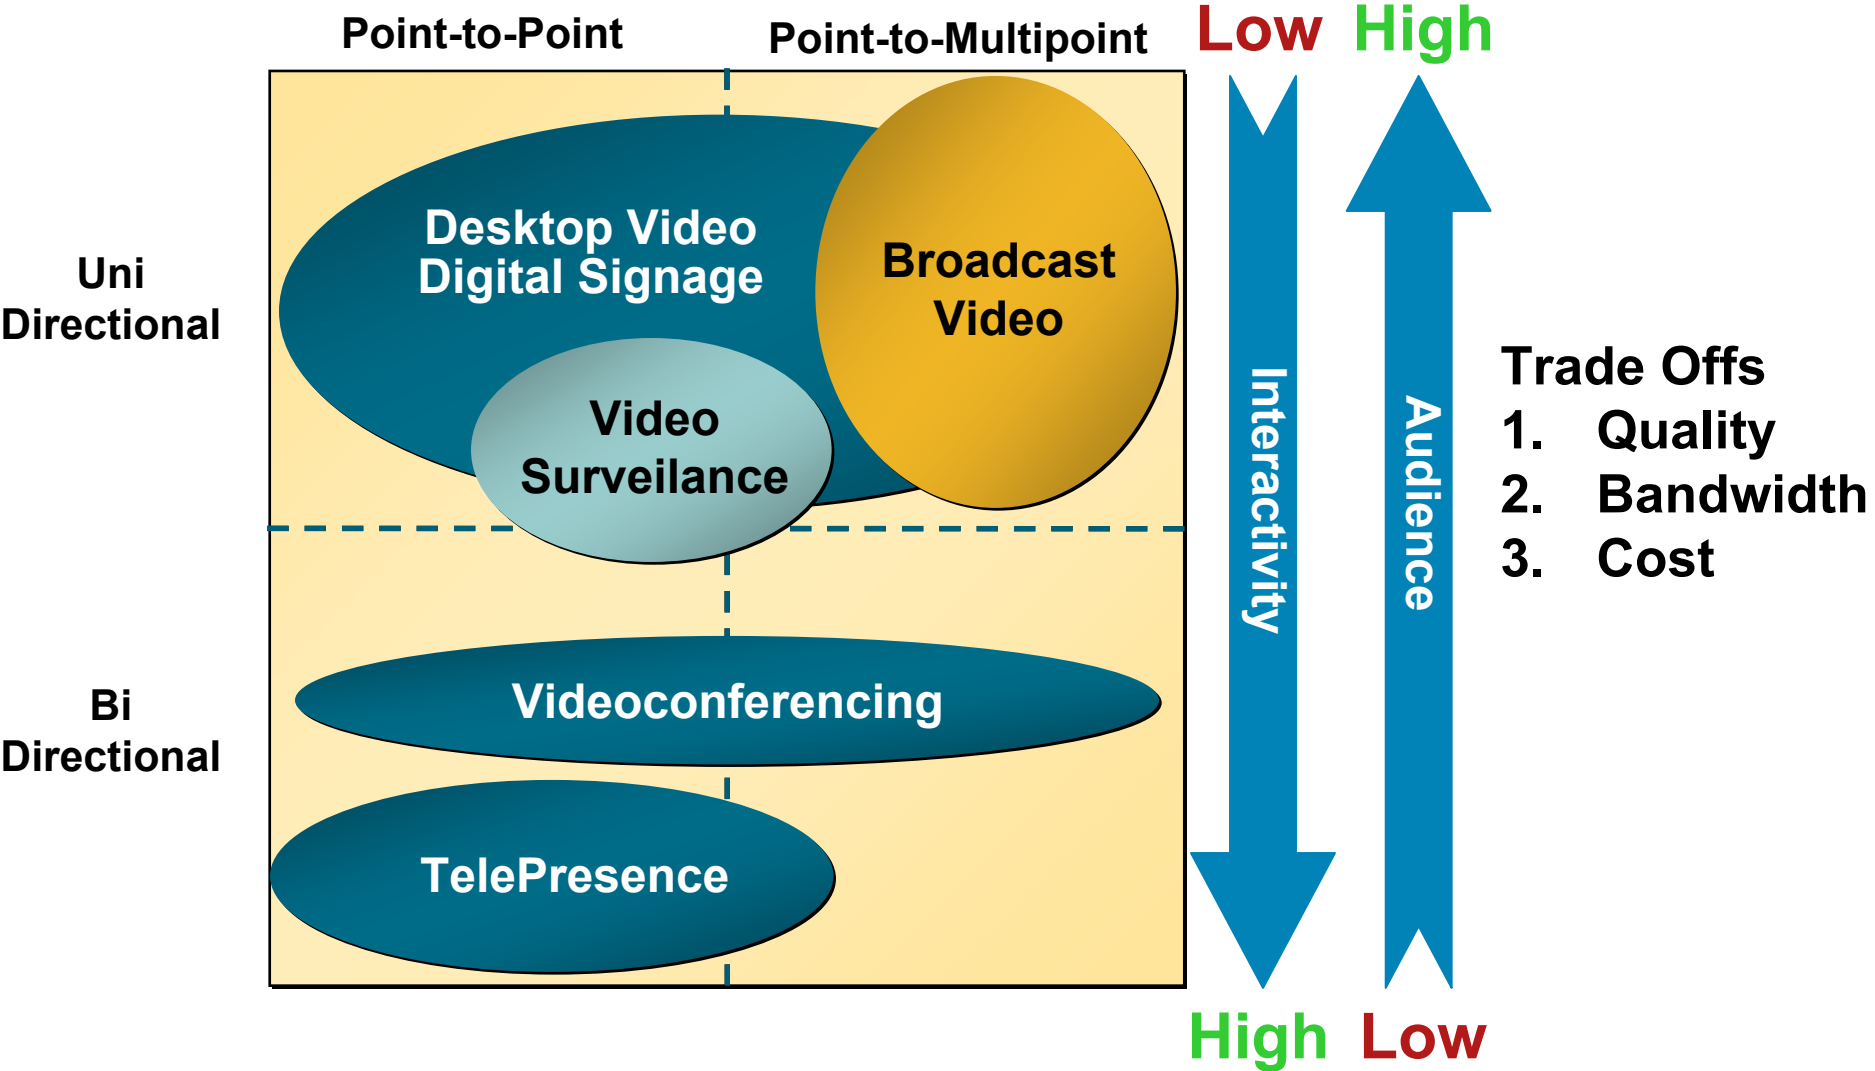

Agenda

- Overview
- Video Architectures
- Video and Digital Media Services

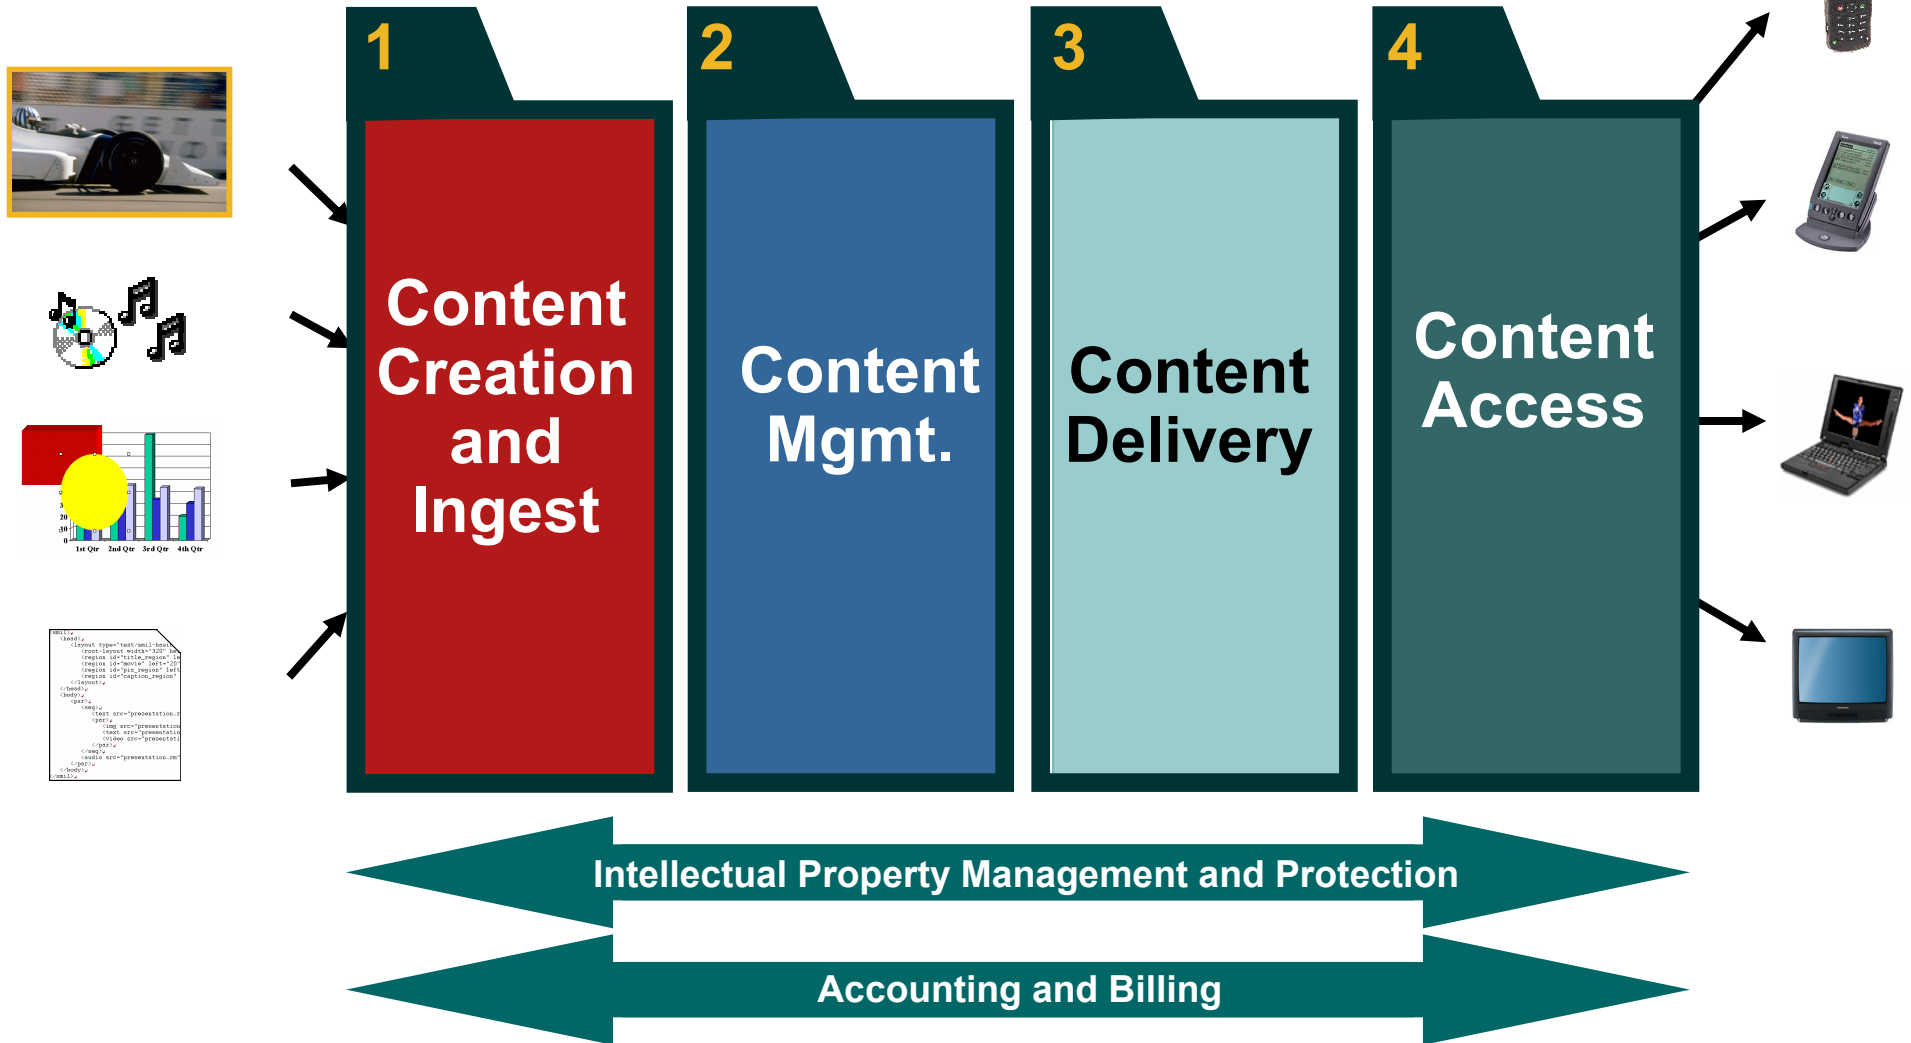

Overview

There are different Video Applications and different Delivery Models

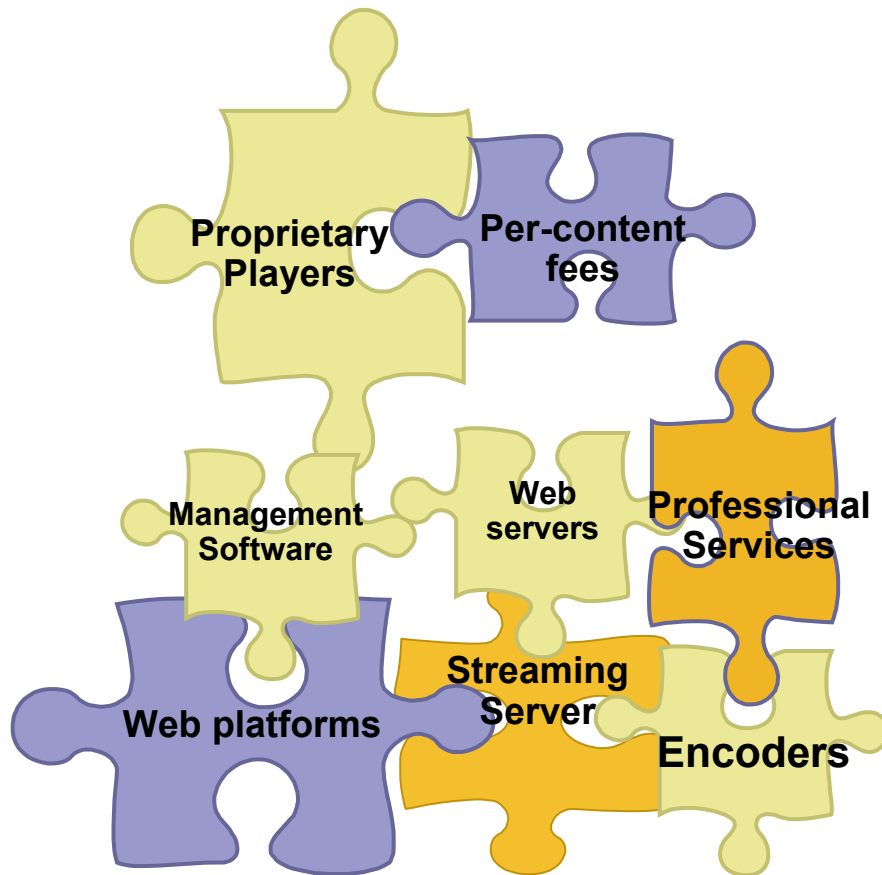

Pillars of a full Digital Media Solution

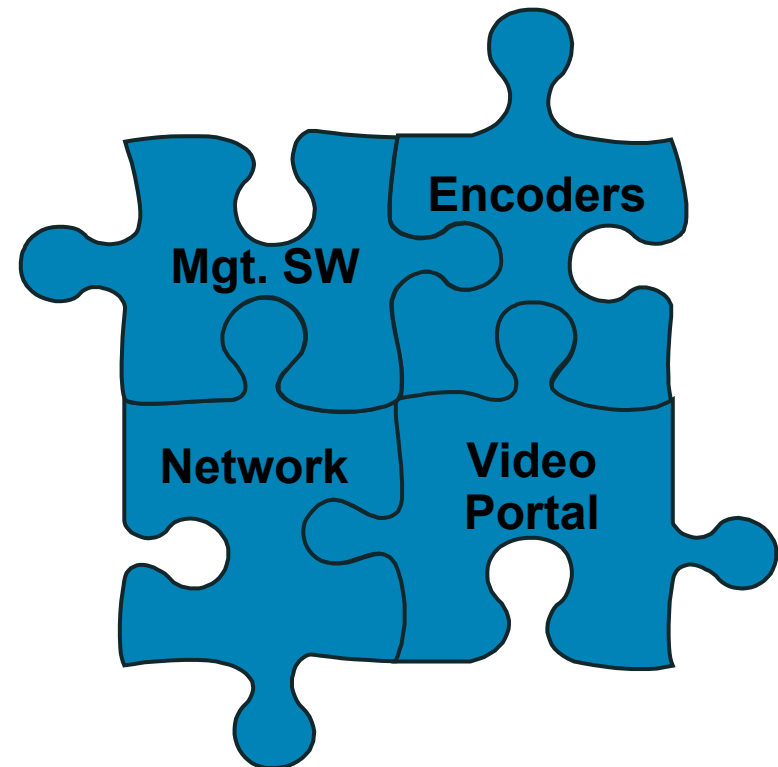

The reality on the Value Chain, and what we want

**Reality: Not Integrated,
Overlapping, Not End-to-End**

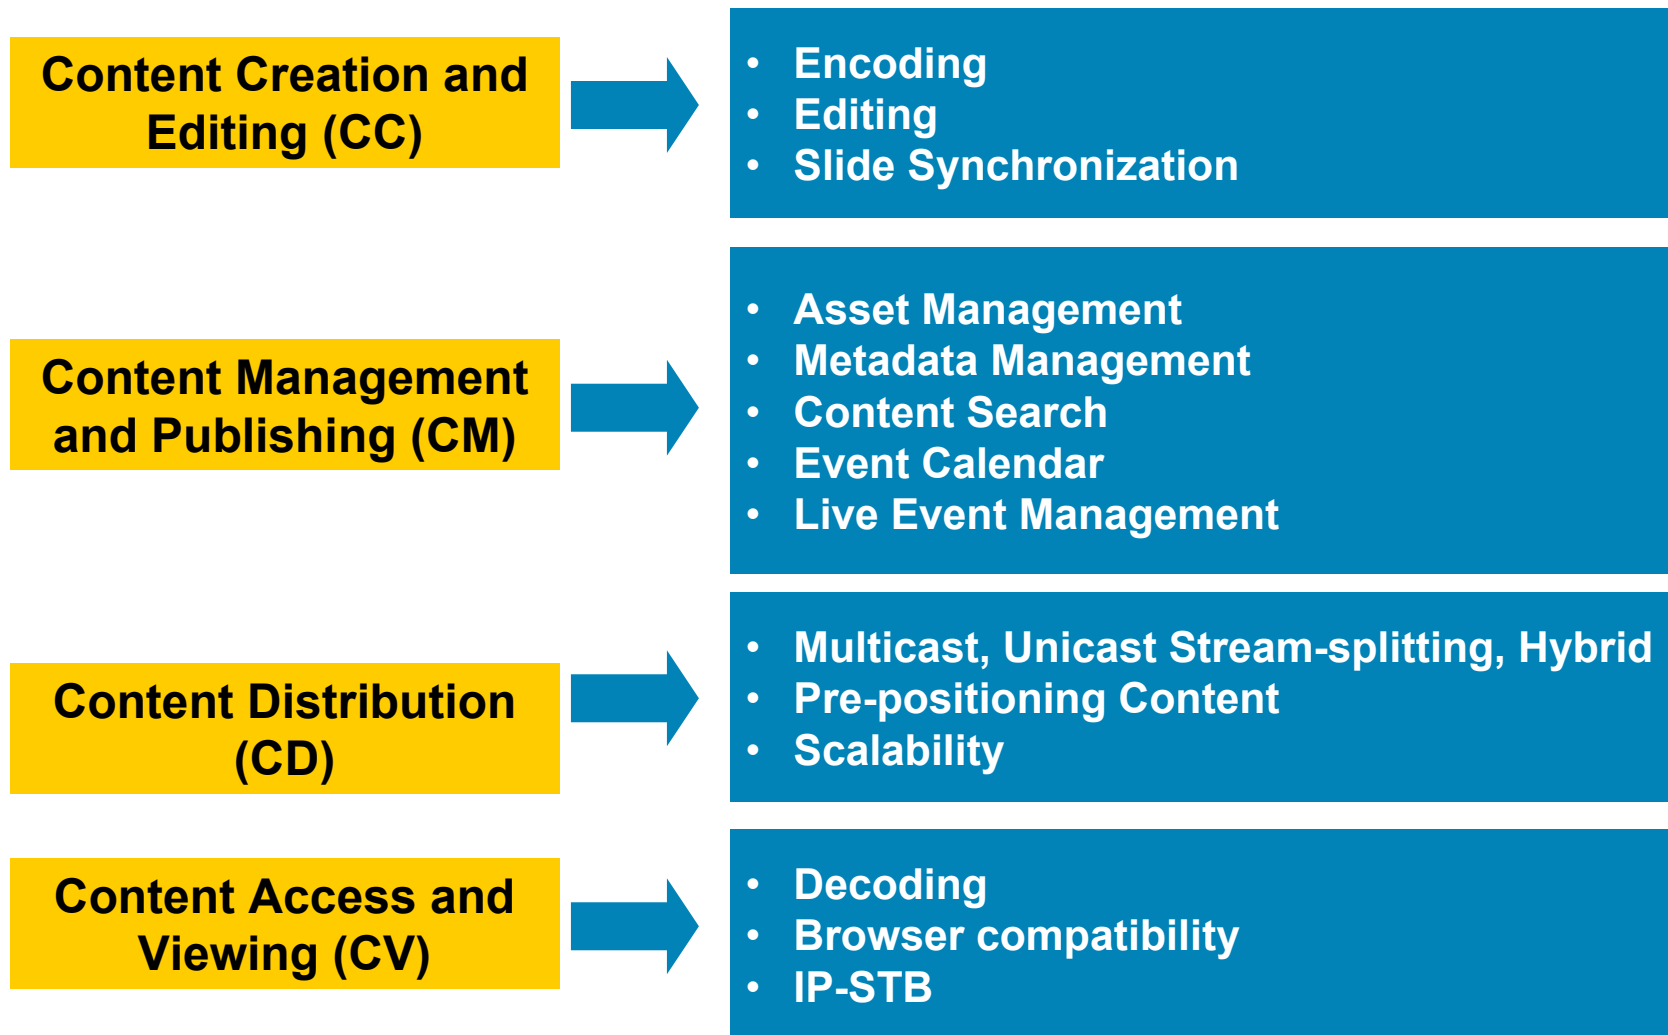

**What we want: Integrated
solution spanning the entire
value chain**

Planning

End-to-End Business Video Solution

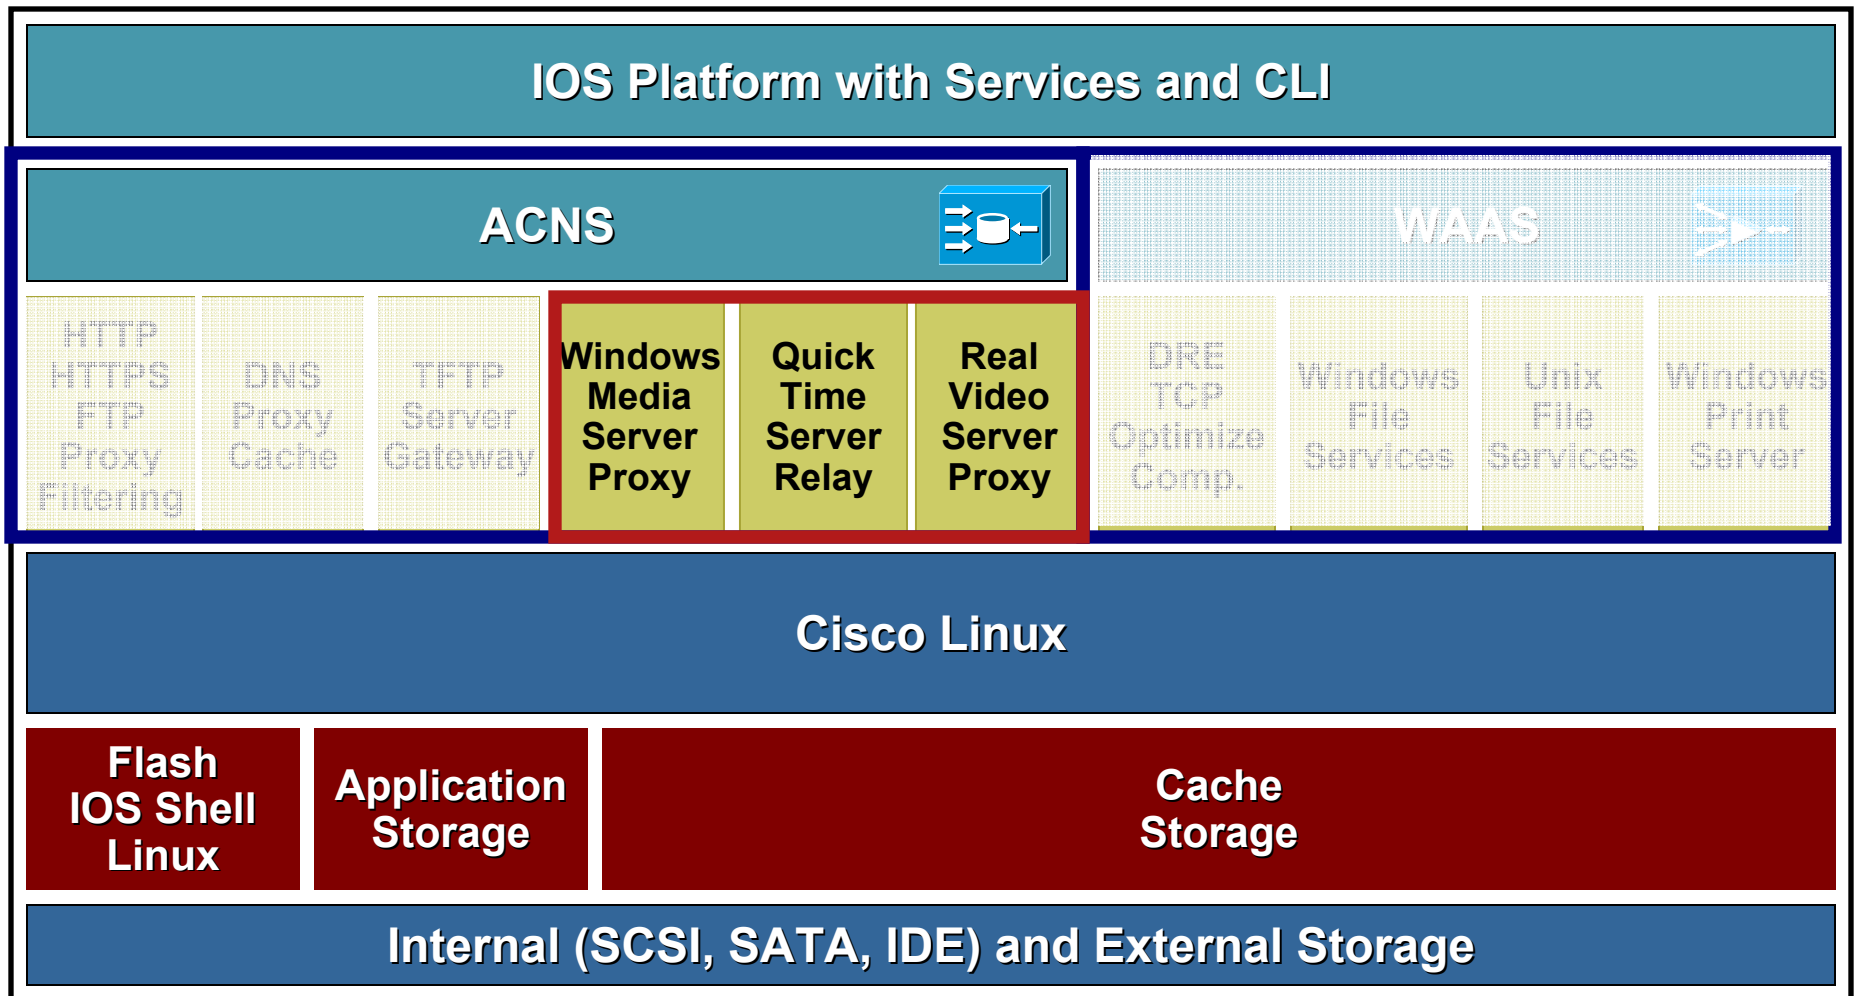

Video Architectures

Wide Area Application Engine (WAE)

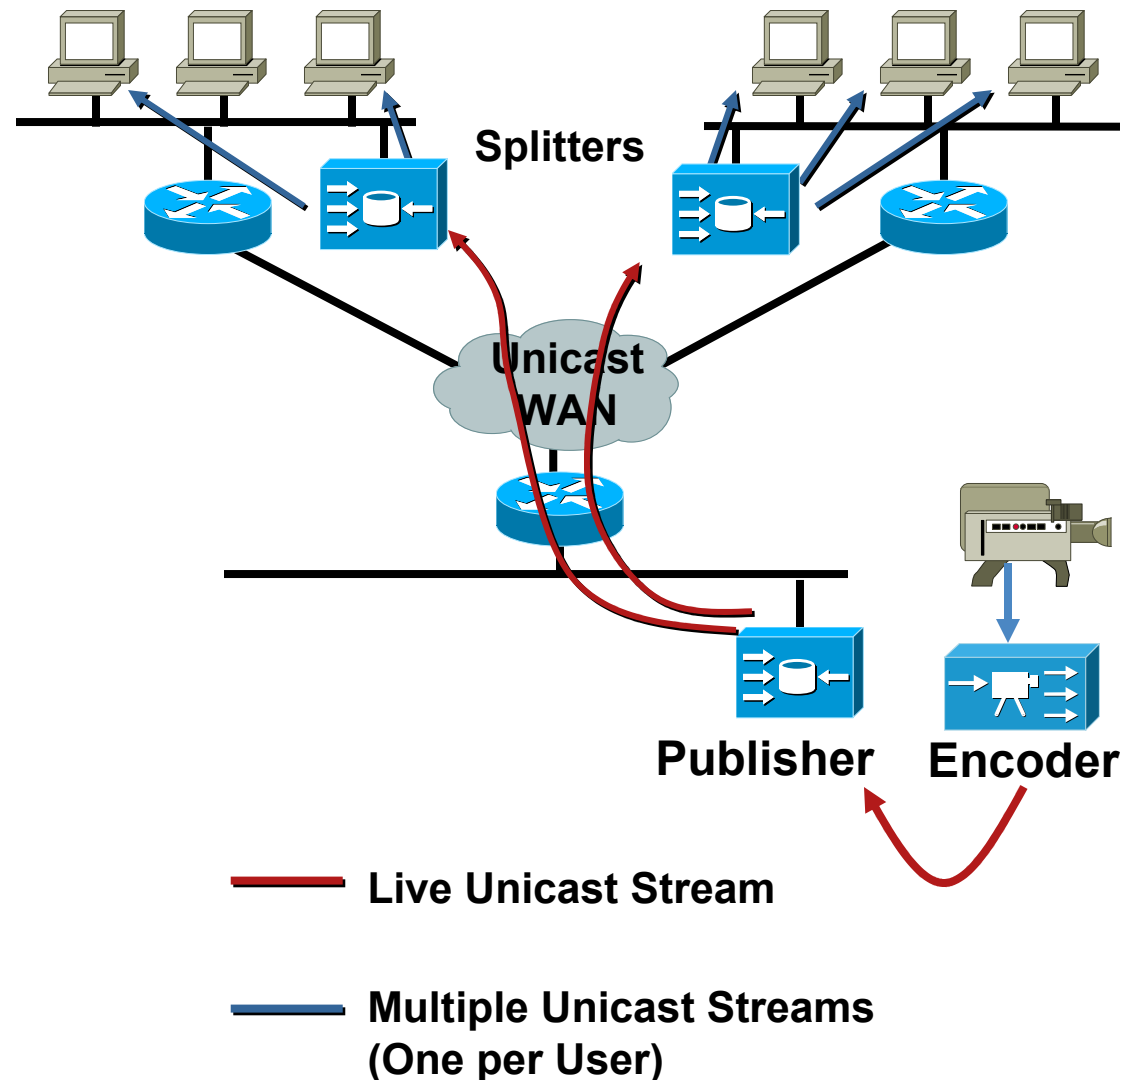

Application and Content Networking Software (ACNS)

Video Architecture

Live Unicast Stream Splitting

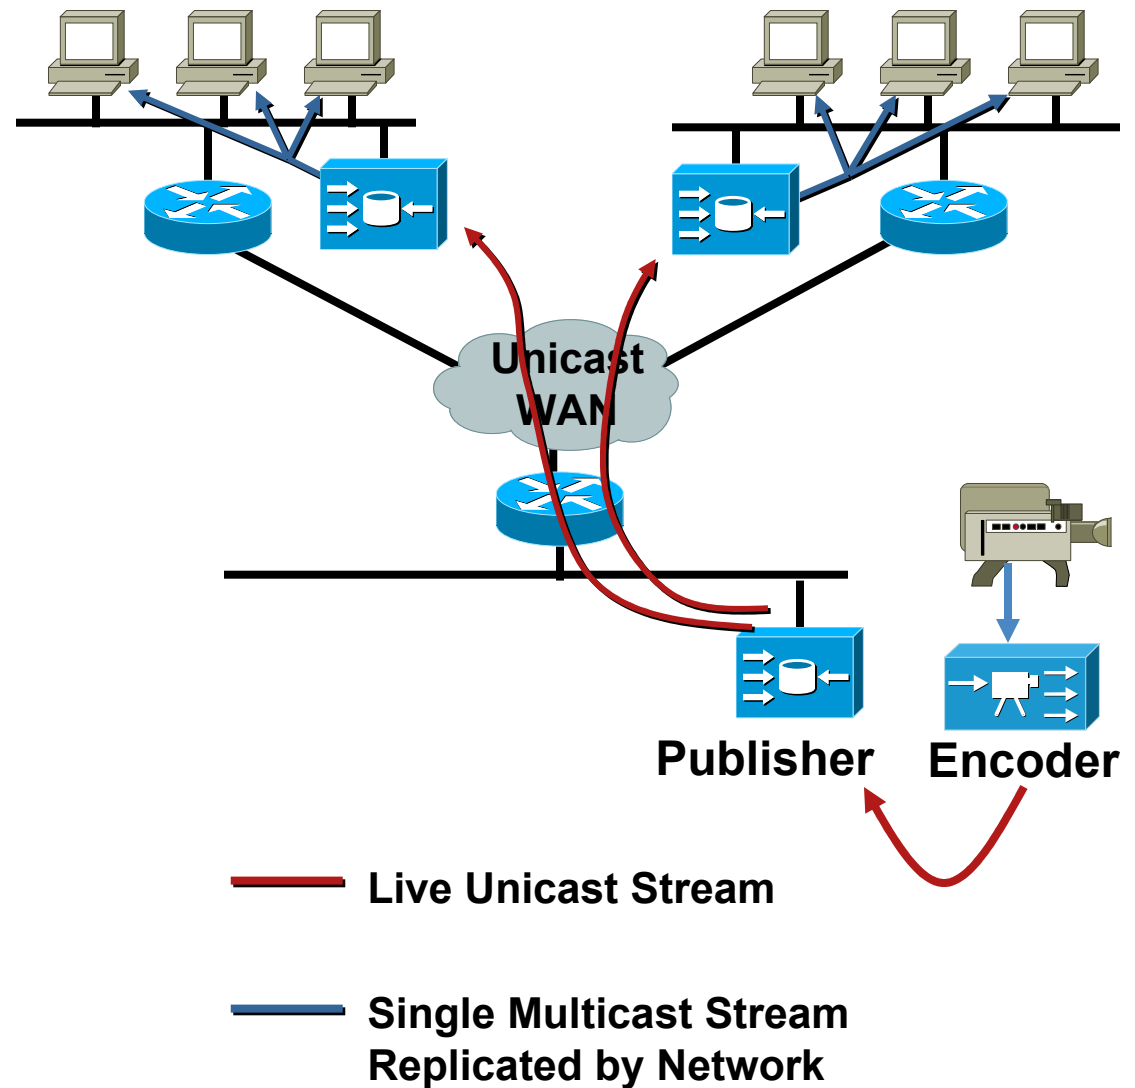

- Overcomes WAN bandwidth bottleneck
- Only solution for adhoc Internet streaming
- Easy to administer since no event planning
- Requires WAE capacity planning

Video Architecture

Live Hybrid Unicast to Multicast

- Multicast enabled LAN only
- Multicast islands require separate Rendezvous Point (RP)
 - Auto-RP
 - Bootstrap router
 - Anycast RP
- WAE scales to many simultaneous programs
- Requires event planning and administration

Video Architecture

Live Capacity Planning

- Identify

 - All participating sites

 - Number of employees/participants per site

 - Percentage of simultaneous participants per site

 - WAN bandwidth per site

 - Maximum portion of WAN bandwidth allocated for streaming

 - Format (Windows Media, QuickTime, Real, IPTV)

 - Standard encoding rate in Kilo Bits per Second (Kbps)

- Cisco provides streaming capacity for WAE's

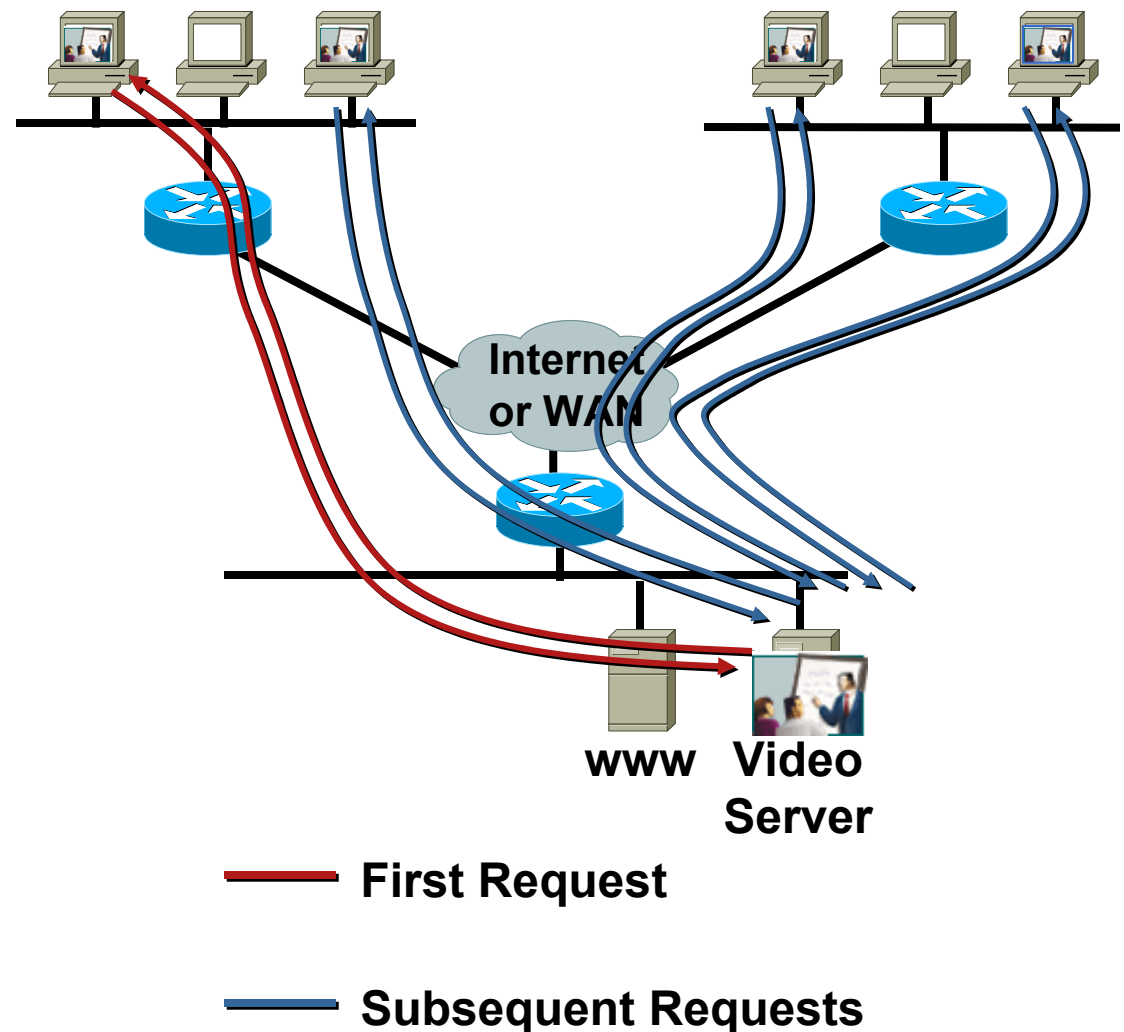

- Unicast stream capacity in Maximum participants = (Node Stream Capacity)/(Encoding Rate)

- Example: 500 participants @ 300 Kbps Windows Media streams requires 150 Mbps (WAE-611 with 224 Mbps license)

Video Architecture

Video on Demand on a non-optimized Network

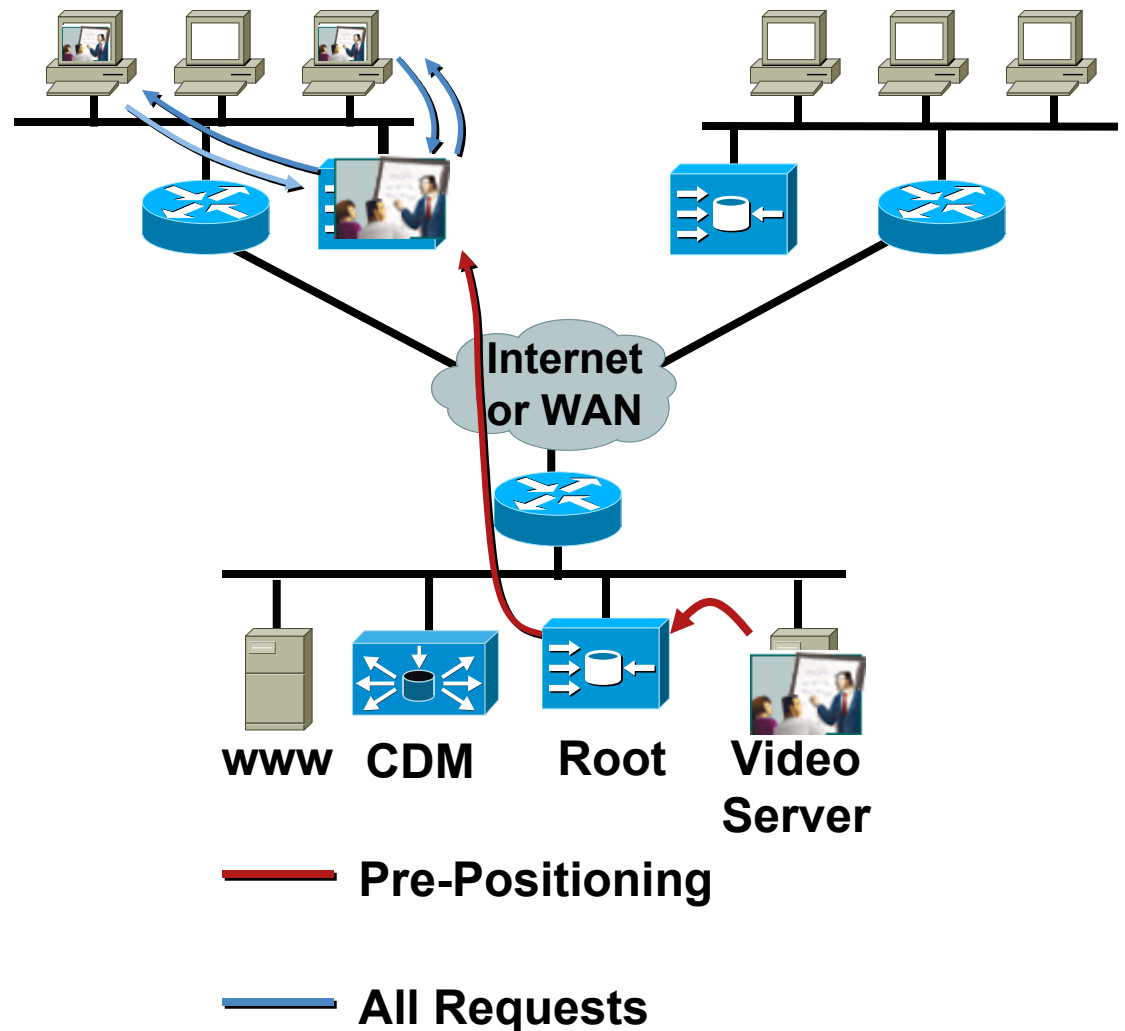

- Separate stream for each client across the WAN
- Sum of all clients must be less than WAN bandwidth
- Expect <5% of clients normally
- VoD is like live
 - Announced VoD
 - Compliance training deadline

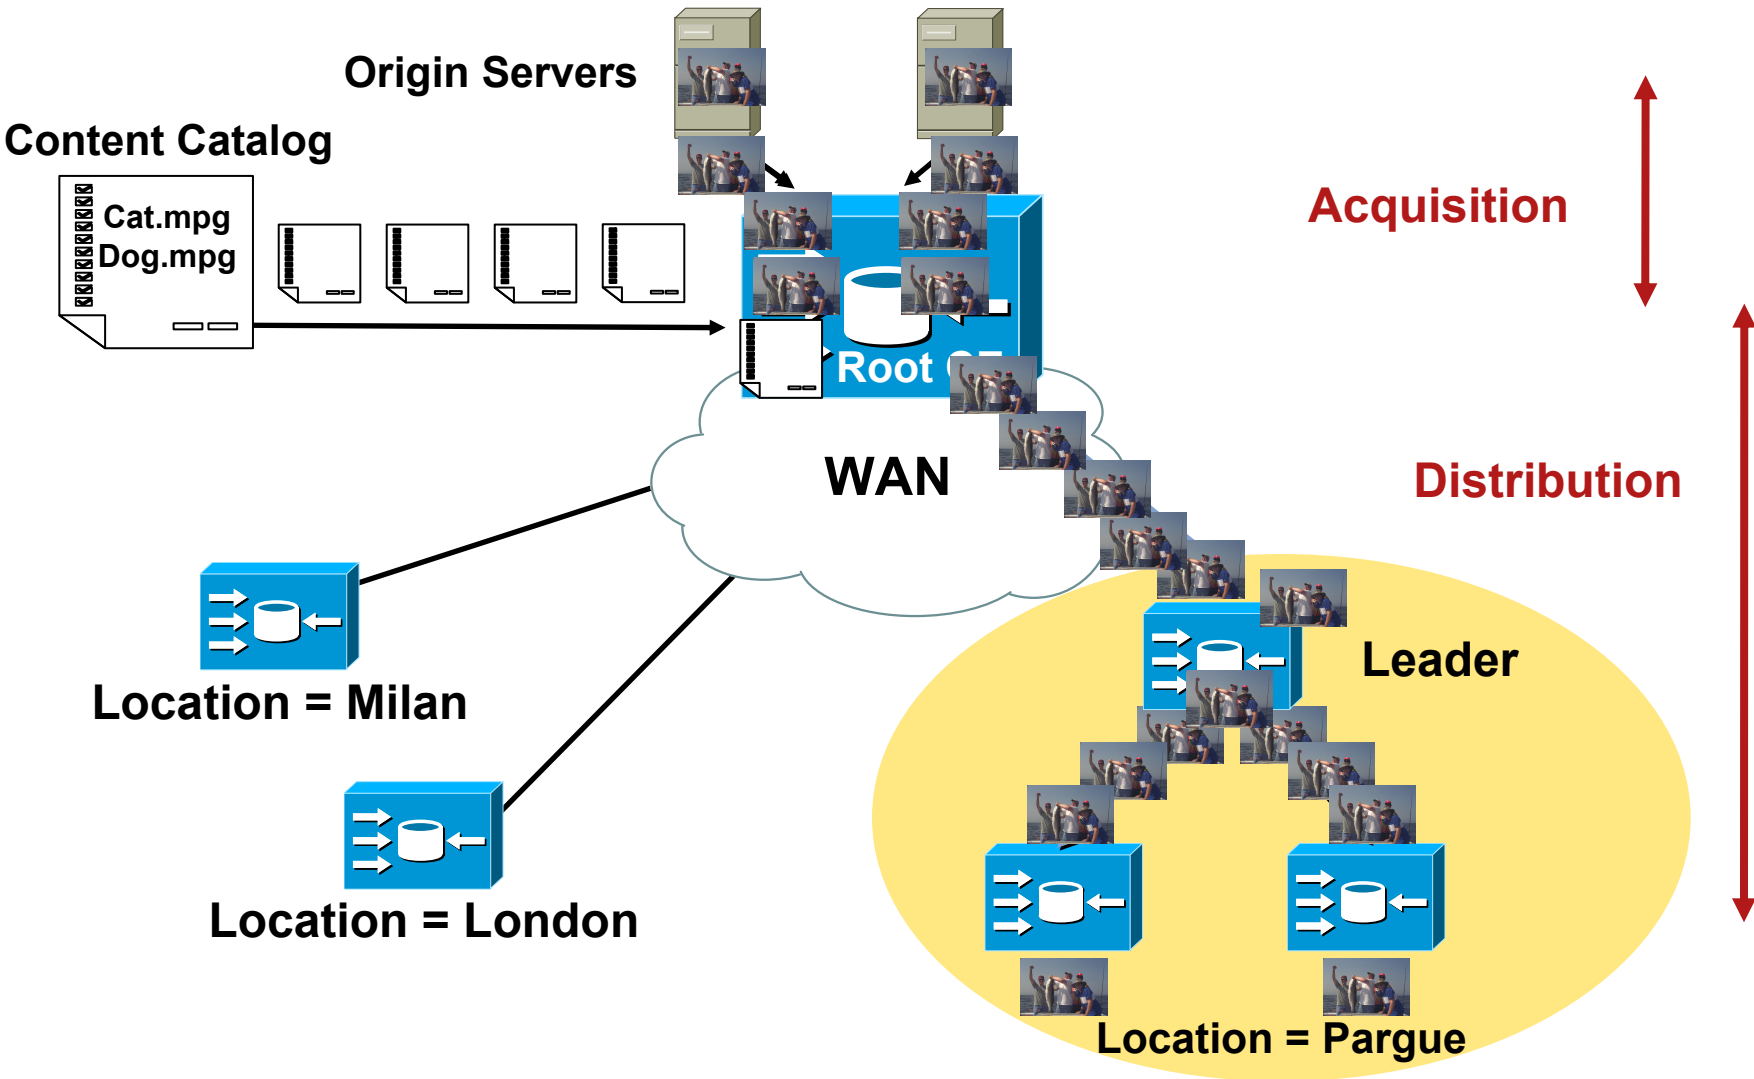

Video Architecture

Video on Demand Pre-Positioned

- Streamed bandwidth may be greater WAN bandwidth
- Extreme quality capable
- Edge WAE mirrors contents of video server
- Video files securely and controllably distributed

Scalable Content Distribution Solution

Video Architecture

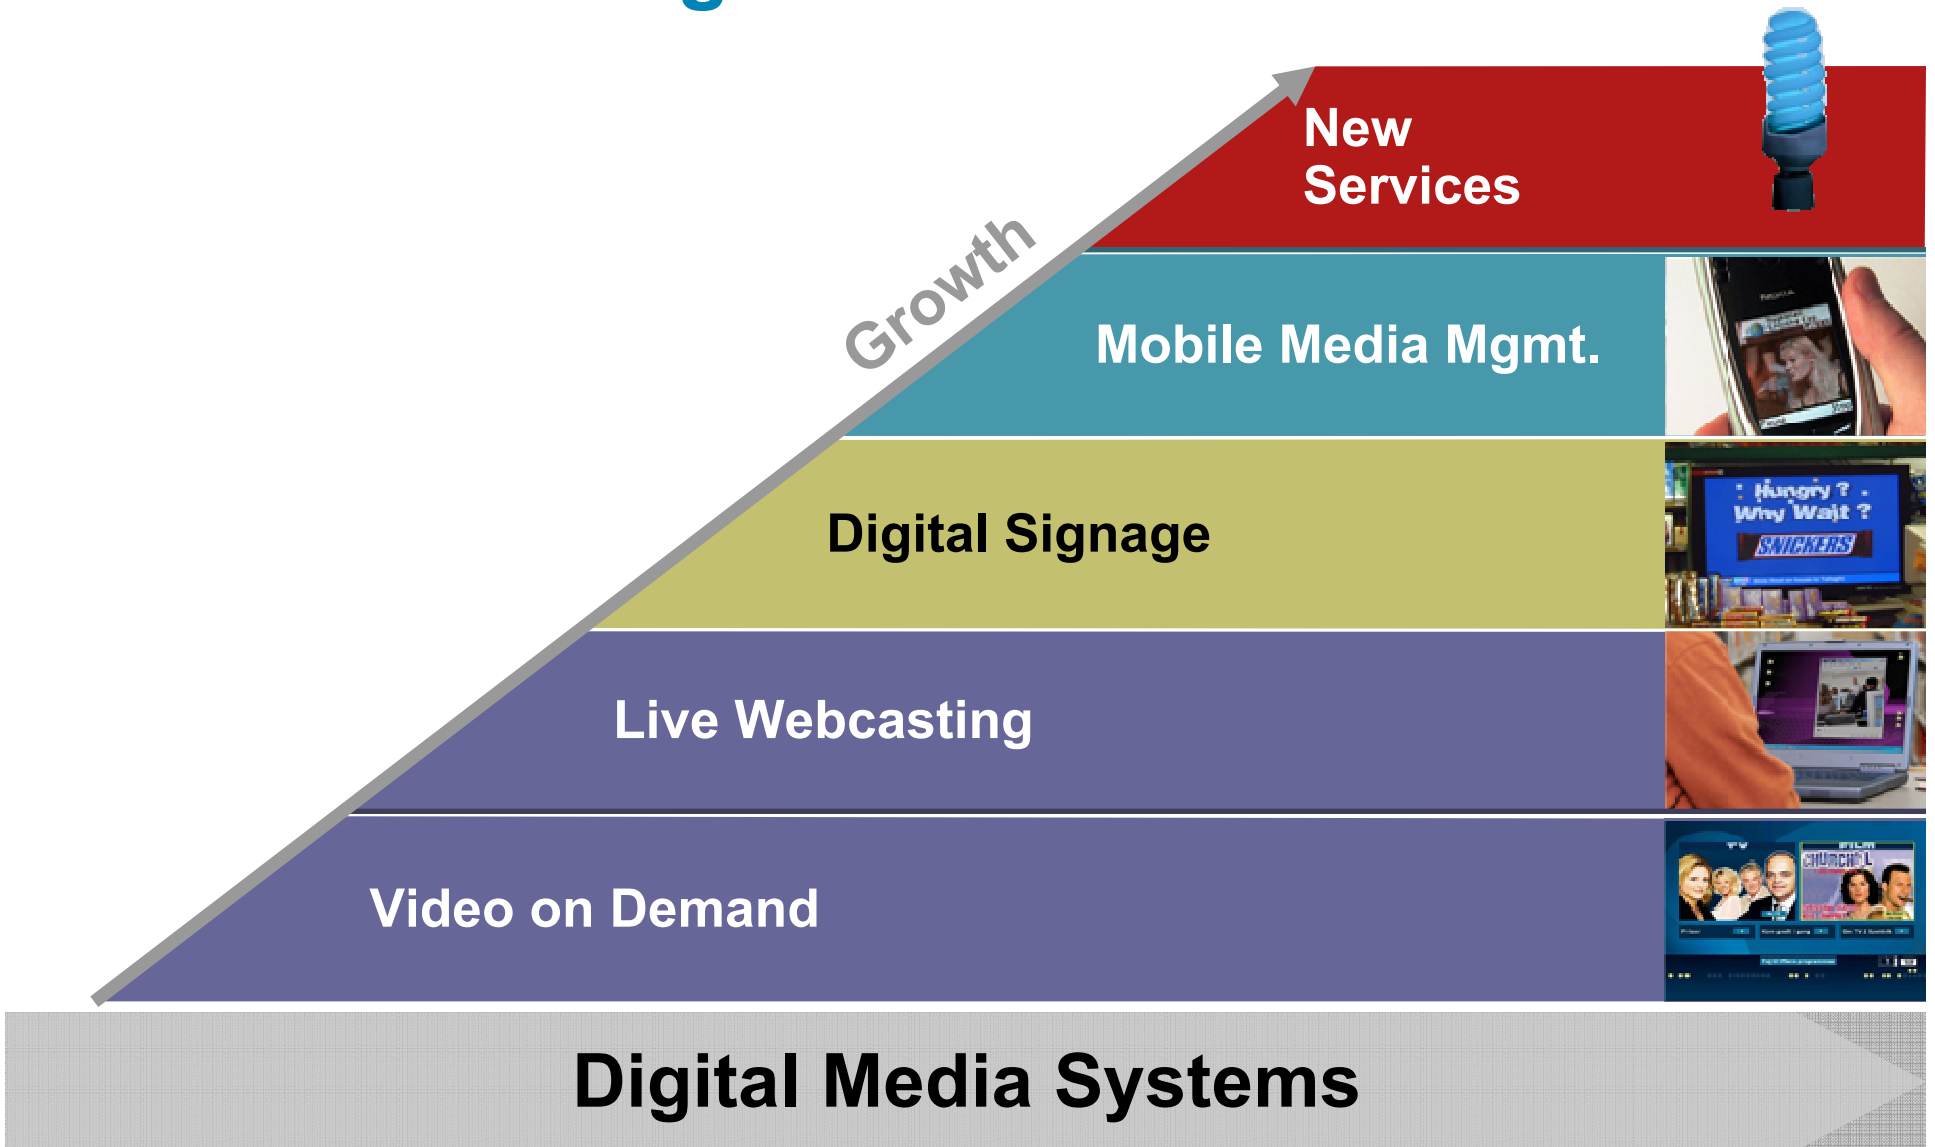

VoD Capacity Planning

- Same as live
- Generally WAE performance required is less than live
- Identify
 - Total existing hours or bytes of video
 - Shelf life of video
 - Popular life of video
 - New video added each week
 - Storage planning horizon
- Storage planning
 - One Hour Storage (Bytes) = (Encoding rate bps * 3600 seconds) / (8 Bits/Byte)

DMM HOME » SELECT MANAGER

Welcome, Super, to the Digital Media Manager 3.5.

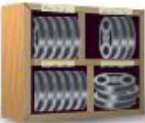

Programs

Upload and manage content and supplemental information.

Playlists

Organize content into a playlist for playback in a dynamic sequence in the Video Portal.

Categories

Organize content into categories within the Video Portal's Program Guide.

Users

Assign and manage user accounts, passwords, permissions and profiles.

User Interfaces

Customize Video Portal interface design and manage interface behaviors.

Deployments

Schedule and manage content deployments.

Navigation Area

Basic Video Playback Controls

Advanced Video Controls

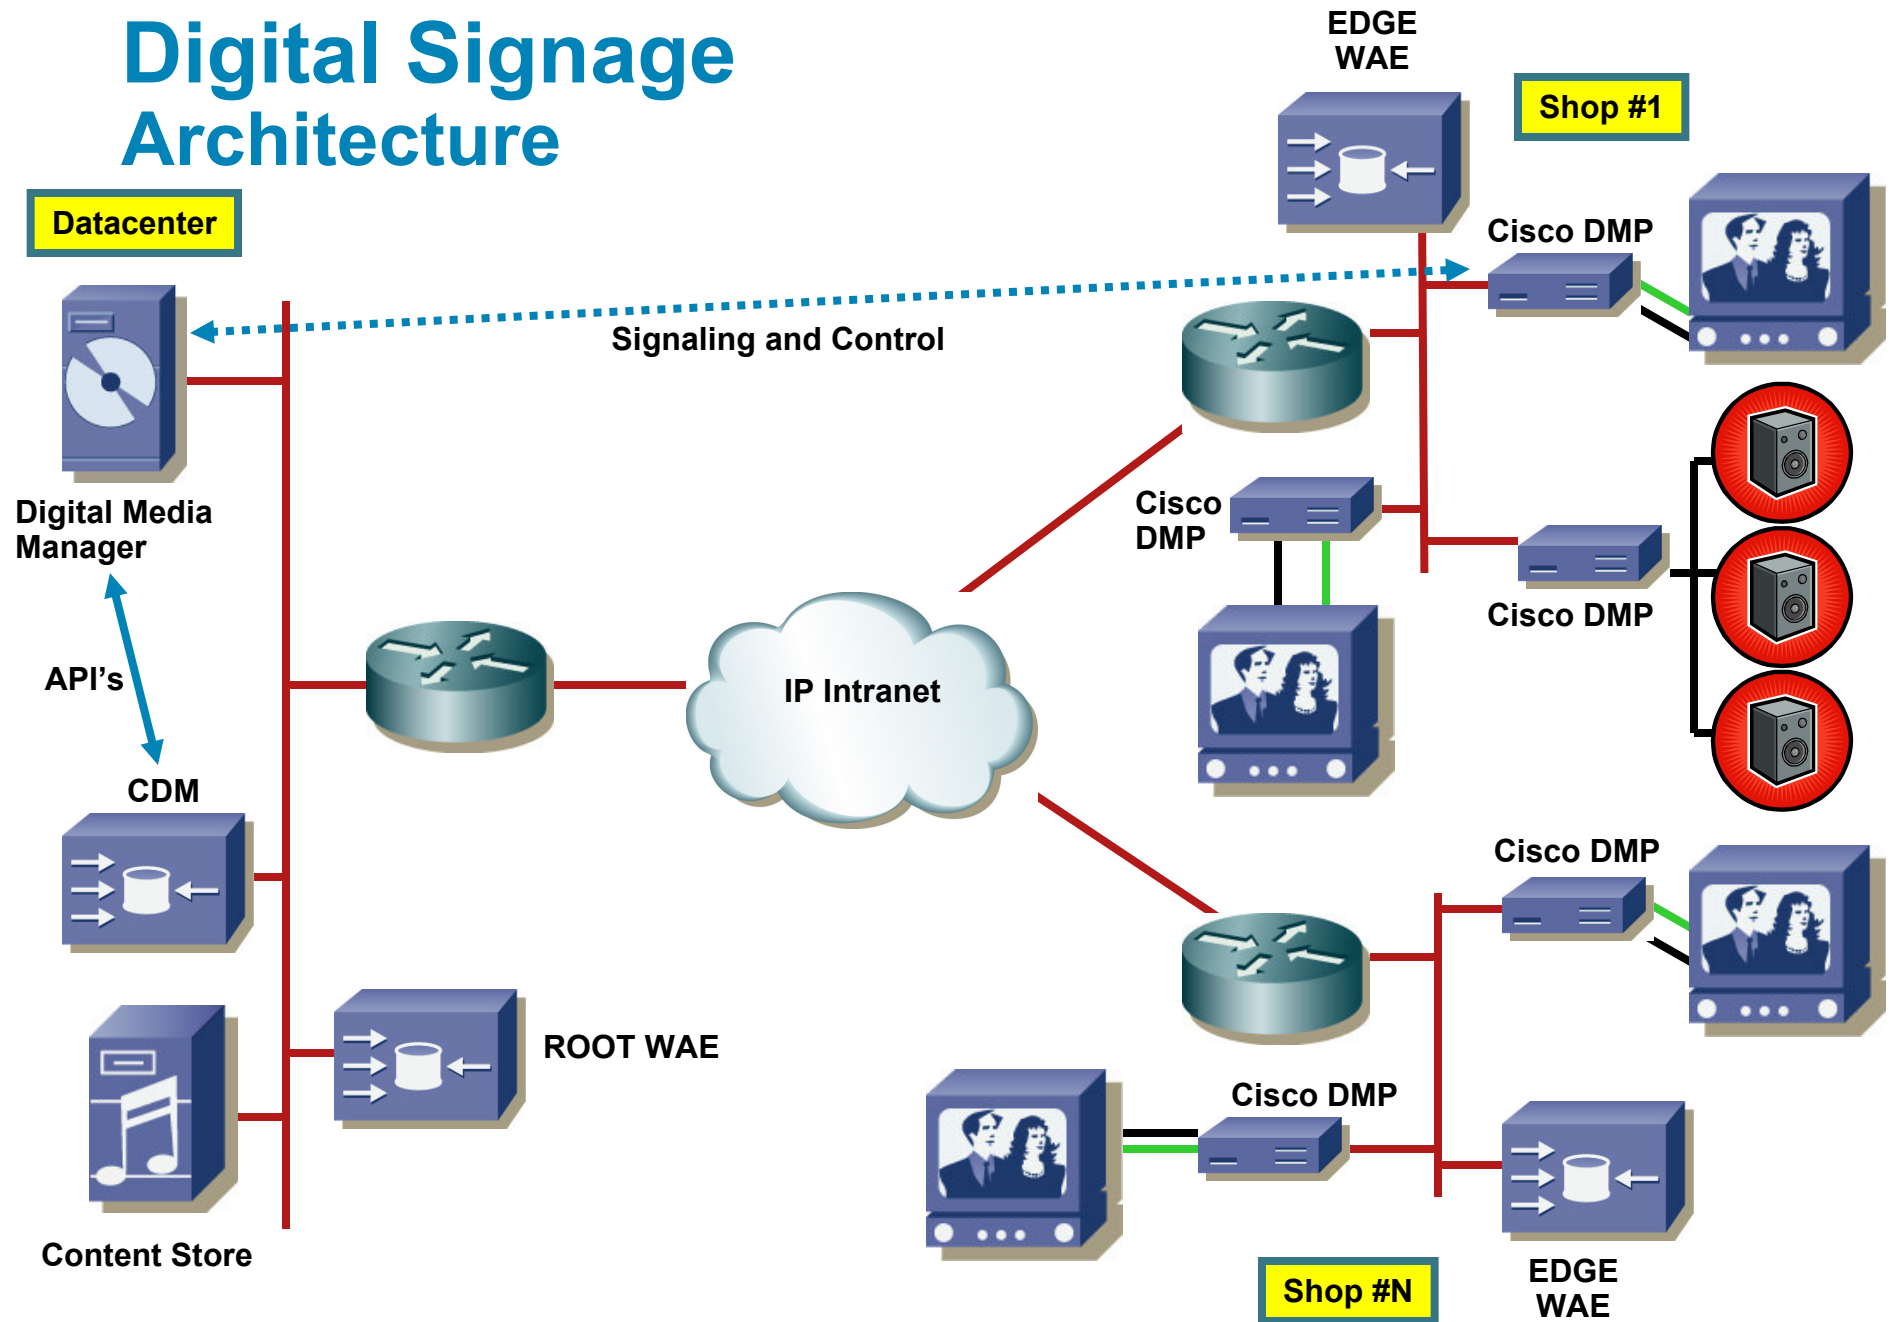

Preview Pane

Thank you for installing the Cisco Video Portal

Digital Signage Examples...

Digital Signage Architecture

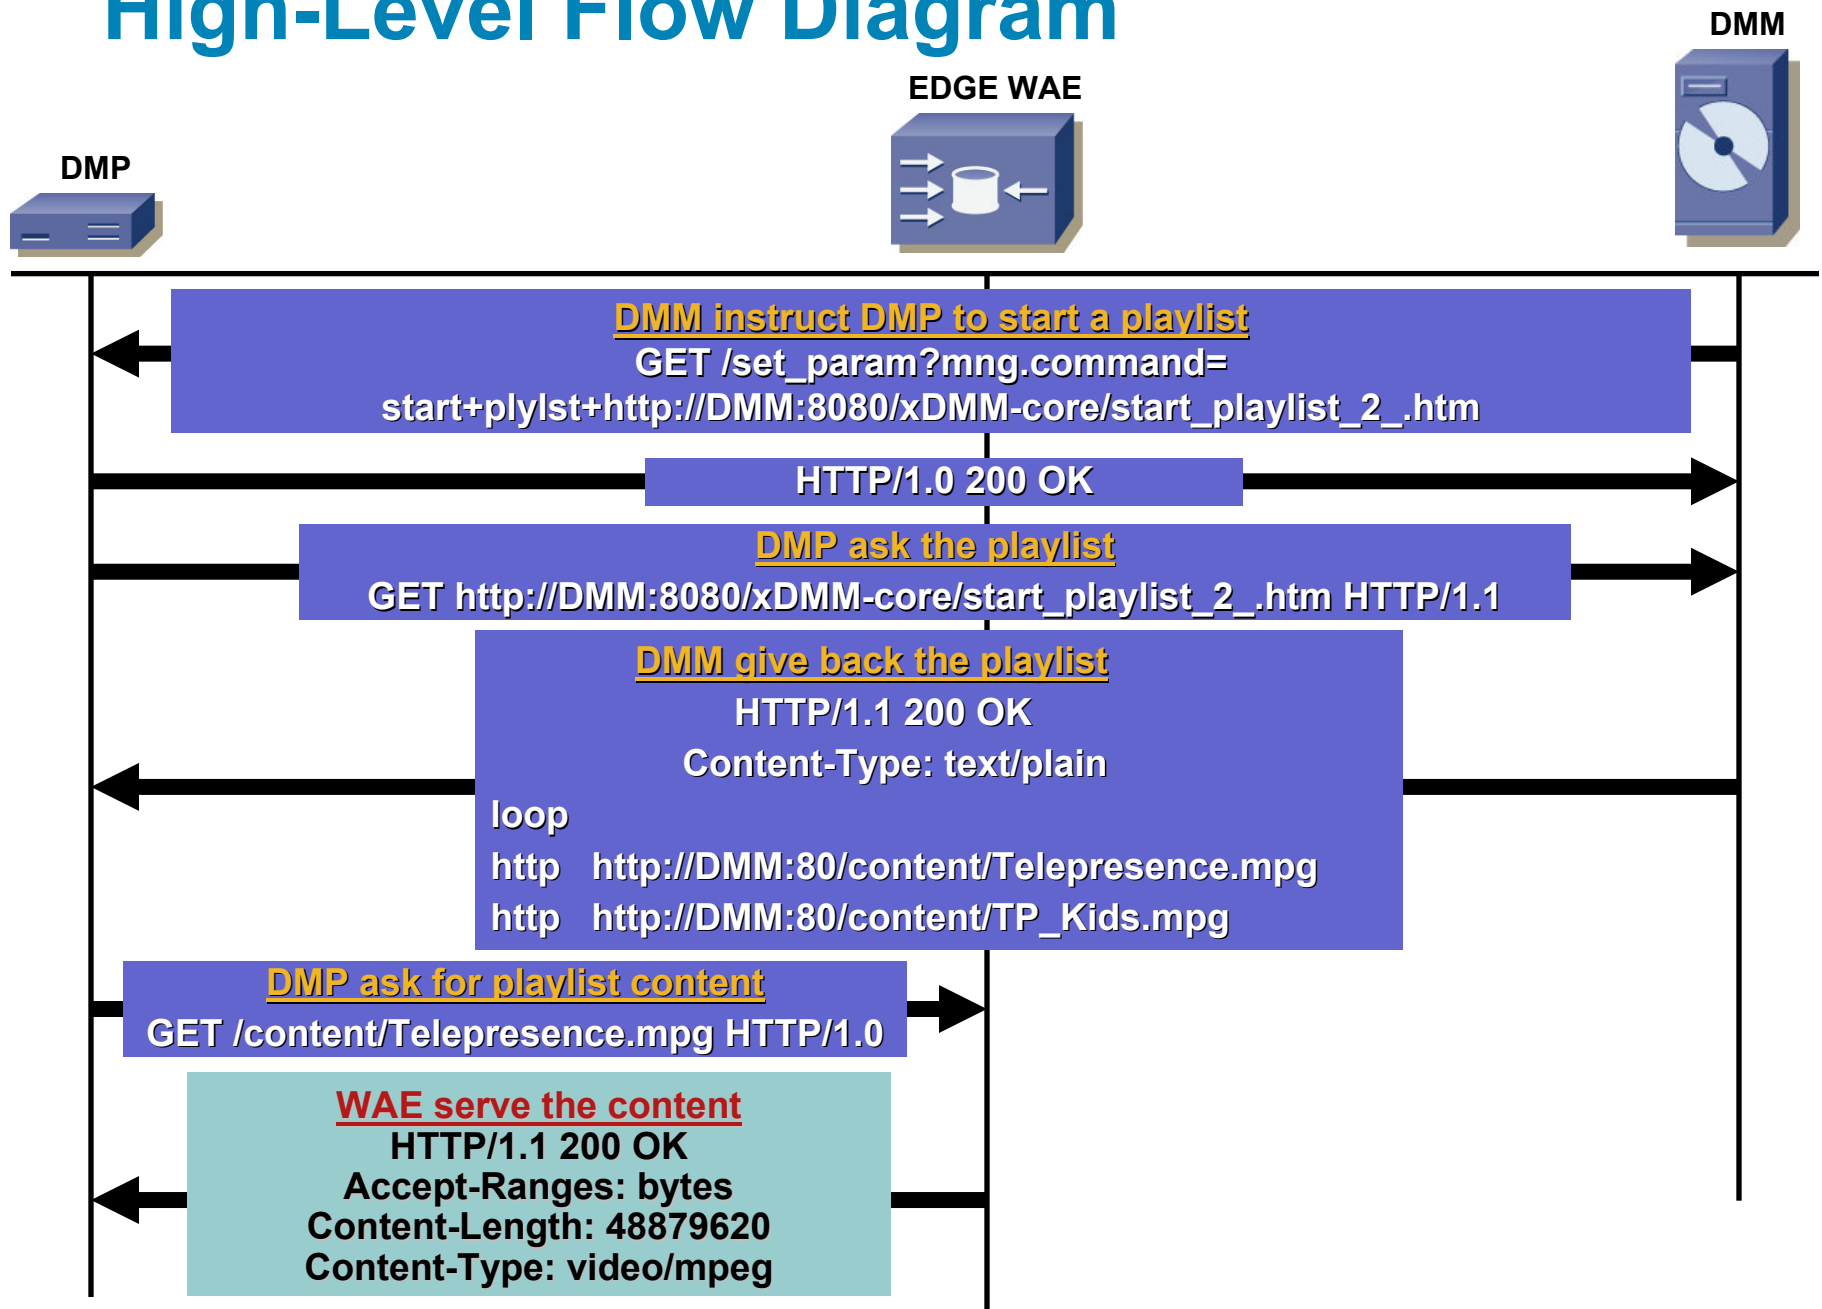

Digital Signage

Features that people need and to look for

- Multiple channels of simultaneous content
- Multiple media formats
 - Audio, Video, Flash, Tickers, Static Images
- Multiple layouts
 - Fullscreen, Video+Flash, Video+Flash+Ticker, many more
- Scale vertical (many branches) and horizontal (many displays in a branch) both to stores contents, playlists and DMP configs
 - Content Delivery Network
 - Local DMP storage
- Display parameters control via IP and RS232
