

Young Vietnamese Engineers forge a future career path in networking.

Students take their strong education and "hands on" experiences gained through their Networking Academy studies and apply it to the professional working environment through the Vietnam Internship Program.

"I loved the opportunity to partner and collaborate with Cisco, and their partners. It gave me an opportunity to learn from the experts and gain "hands on" experience, as well as giving me ideas for future study plans, and further real life work experiences. The program was an excellent opportunity to learn and integrate into a professional working environment"

Thanh Thuy Nguyen,
CCNA Student from Hanoi University of Technology

"As a result of the Vietnam Internship opportunity, I have completed my CCIP certification and was also excited to receive a job offer at the end of my internship with DTS Corporation."

Duc Thien Nguyen,
CCNA Student from Hanoi University of Technology

The Vietnam Internship Program was developed with the commitment of Cisco Systems, Cisco Channel Partners and Cisco Networking Academies in Vietnam. The design of the program centered on the desire to create "real life" working opportunities to motivated Networking Academy students wishing to gain valuable professional experience.

The program was designed to accommodate students for six to twelve month internship periods, and relied on the commitment of the entire Cisco Systems engineering team of Vietnam led by Mr Cuong, Systems Engineering Manager, the Vietnam Cisco Networking Academy Community and Cisco partners: CT-IN an Advanced Technology Provider (ATP) for Optical Networking and DTS a leading systems integrator in Vietnam.

Final year students were selected from Hanoi University of Technology and HUT Genetic . The interns covered a wide range of technologies, and were involved in key projects for Cisco and their partners.

Mr Tan Bui, Marketing Manager and Partner Relations from DTS was pleased to see the excellent qualifications of those students that participated in the internship program. "I felt that the Cisco Networking Academy students demonstrated excellent base knowledge and skills, and it was pleasing to see the energy and ambition of these young professionals starting out on their career path. After their internship experience, I think we shall see these excellent young engineers really be influential supporters of the networking industry in the future and help in the Vietnam country transformation in the long-term".
