**EMC Corporation: At a Glance**

- Revenues (2008):** \$14.9 billion
- Net Income (2008):** \$1.4 billion
- Employees (end Q2 2009 worldwide):** ≈ 41,500
- Countries where EMC does business:** > 80
- R&D Investment (2009 estimate):** \$1.5 billion
- Total Cash and Investments (end Q2 2009):** \$10 billion
- Operating Cash Flow (1H 2009):** \$1.44 billion
- Free Cash Flow (1H 2009):** \$1.1 billion
- Market Capitalization (August 3, 2009):** > \$30 billion
- Founded:** 1979

| HP 4.2%                             | HDS 3.1%              | CommVault 2.2%           |

Strategy Tracker Sep 2009; IDC Worldwide Quarterly Storage Software Tracker, Sep 2009. \*NetApp, IBM, Symantec, EMC's revenues with Dell's Dell/EMC (2.4/8.0%) revenues.

**Background of Cloud Computing**

**Cloud Computing**  
Part of grid computing + most of utility computing + more  
New paradigm of computing

**Utility Computing**  
Virtualization improves resource utilization and reduces CAPEX, OPEX  
Offer metered service

**Grid Computing**  
Parallel computing  
Clustered nodes, kept ready to handle distributed workload  
Small workload causes unutilized/under-utilized nodes

© 2009 VMware | Cisco | EMC. All rights reserved.

**What Analysts say about Cloud**

- "The cloud is IT as a Service. Delivered by IT resources that are independent of location." - 451 Group
- "Cloud computing is a style of computing where massively scalable IT-related capabilities are provided 'as a service' across the internet to multiple external customers." - Gartner
- "A pool of abstracted, highly scalable, and managed infrastructure capable of hosting end-customer applications and billed by consumption." - Forrester Research
- "Cloud is a model for enabling convenient, on-demand network access to shared pool of configurable computing resources (e.g. networks, servers, storage, applications) that can be rapidly provisioned & released with minimal management effort or service provider interaction." - NIST

© 2009 VMware | Cisco | EMC. All rights reserved.

**My Organization Needs New Computing Resources**

- Option 1 – Invest and expand organization's infrastructure**
  - Keep adding servers, storage, and connectivity
  - components, HVAC systems
- Option 2 – Pool and virtualize existing resources**
  - Increase resource utilization beyond physical limit
- Option 3 – Leverage cloud computing infrastructure**
  - Extend virtualization beyond enterprise datacenter
  - Hire computing resources from cloud service provider
    - Pay-as-you-go

vmware | CISCO | EMC<sup>2</sup>

### Cloud Services

Cloud computing enables cloud services

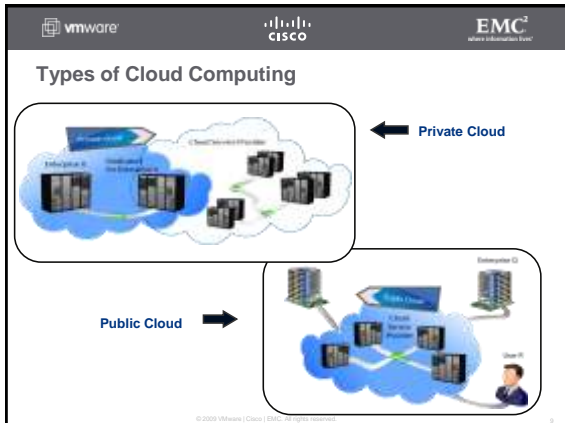

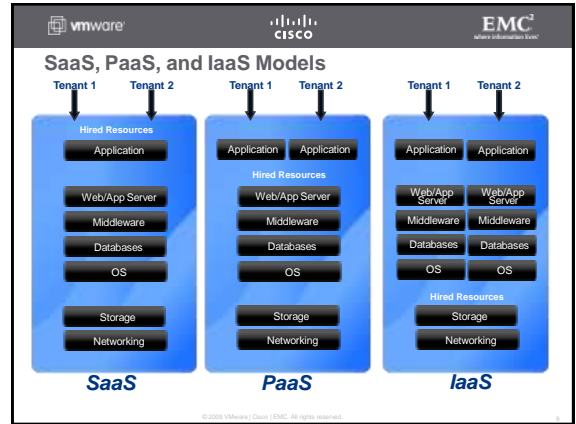

Characteristics:

- Offsite, may be provided by third-party vendor
- Accessed via the Internet
- Minimal/no IT skills to implement cloud services
- Underlying technology is transparent to the user
- Web browser or web service API based access
- Dedicated or shared resources
- Measured service

Cloud service offerings classified into three models

- SaaS, PaaS, IaaS

© 2009 VMware | Cisco | EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

### Cloud Benefits

- Increased capability
- Improved performance
- Lower cost
- Reduced risk
- Flexible scaling
- No infrastructure management complexity

© 2009 VMware | Cisco | EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

### Cloud Backup Service Decho Mozy

mozyhome Online Backup  
mozypro Online Backup

2GB absolutely free forever  
Unlimited personal backup  
Mac and Windows support

Secure online backup for businesses  
Server and network share support  
Web-based administration

# Imagine....

## Virtual Computing Environment

Cisco and EMC, together with VMware, form Virtual Computing Environment, an unprecedented coalition to accelerate pervasive virtualization and private cloud infrastructures; Cisco-EMC joint venture to speed customer adoption.

© 2009 VMware | Cisco | EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

## News Announcement – Imagine the Power of Three

The Virtual Computing Environment coalition, Cisco and EMC, together with VMware, have committed to extensive and on-going collaboration to lead the journey to pervasive virtualization and private cloud with technology innovation, business partnership, venture investments and partner ecosystem leverage.

**Technology Innovations**  
**Vblock Infrastructure Packages.** Integrated best-of-breed packages from Cisco and EMC, together with VMware – engineered, tested, and validated to deliver revolutionary TCO and pervasive virtualization at scale in today's most demanding use cases.

**Integrated Pre-Sales, Services and Support**  
**Vblock Unified Customer Engagement.** Dedicated pre-sales, professional services and single support experience to provide a seamless, end-to-end customer experience.

**Solutions Venture and Investment**  
**Acadia.** A Cisco-EMC joint venture to build, operate, and transfer Vblock infrastructure to organizations who want to accelerate their journey – available Q1 CY2010.

**Partner Ecosystem Leverage**  
**Vblock Partner Ecosystem.** A select group of partners, growing over time, which augment, sell and deliver Virtual Computing Environment solutions to enable the journey to pervasive virtualization and private cloud.

## Vblock Infrastructure Packages

### Managing risk while delivering the power of virtualization

**What is it:**  
 The combined best-of-breed technologies from Cisco and EMC, together with VMware – pre-integrated, tested, and validated to redefine the foundation of datacenter virtualized infrastructure.

**How it works:**  
 Rather than buying and assembling individual components, now acquire validated Vblock Infrastructure Packages direct or from partners with a seamless services and support experience.

**Benefits:**  
 \*Accelerating the journey to pervasive virtualization and private cloud computing while lowering risk and operating expenses  
 \*Customer assets (operating systems, applications, and data) are on-boarded as solution packages

**Imagine the power of three ...**  
**Redefining the foundation of data center infrastructure**

## Vblock Infrastructure Packages

### A New Way of Delivering IT

**Benefits:**  
 Accelerate the journey to pervasive virtualization and private cloud computing while lowering risk and operating expenses  
 Ensure security and minimize risk with certification paths  
 Support and manage Service Level Agreements  
 – Resource metering and reporting  
 – Configuration and provisioning  
 – Resource utilization  
 Vblock is a validated platform that enables seamless extension of the environment

**Secure, Extensible, SLA-driven, Infrastructure**

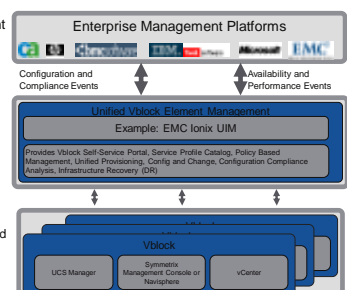

© 2009 VMware | Cisco | EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

## Unified Vblock Element Management

### Single Point of Management, Extensible Integration Framework

Unified Vblock Management Interface  
 Consolidated view into all Vblock infrastructure  
 Single integration point  
 IT self-service portal  
 Mini service catalog and dashboard for self-provisioning  
 Policy-based management  
 Fine-grained tracking, traceability, reproducibility  
 System-wide compliance and remediation  
 Automated discovery and deployment

© 2009 VMware | Cisco | EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

### VCE's Seamless Support Experience

Unified inter-company collaboration tool  
Joint problem re-creation labs

Single experience for onsite and remote support

Cross-company, cross-product-trained support experts

Cooperative Engineering Groups

Common metrics and alignment  
Shared problem resolution and escalation processes  
Documented processes via best practice Support Implementation Plan

Imagine the power of three ...  
Industry's first single support experience

© 2009 VMware, Cisco, EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

Driving Efficiency. Control. Choice.

### First Step to Cloud & EMC optimization product

Le Hung  
EMC Technology Consultant  
le\_hung@emc.com

© 2009 VMware, Cisco, EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

### First Step To Cloud: Virtualization

Optimize existing resources – **virtualize the data center**

- Combine resources together and abstract them to create a virtual world
- Virtualization of application and infrastructure

Extend the virtualization beyond a data center

- Pool all your 'federated' resources from multiple sites
- That creates what we could call an "internal cloud"

© 2009 VMware, Cisco, EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

### Virtualization on Server Layer

**Physical Environments**

- 24 CPUs
- 24 NICs
- 48 GB of memory

**Virtual Environments**

- 8 CPUs
- 8 NICs
- 16 GB of memory

Utilization the System Resource

© 2009 VMware, Cisco, EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

### Fibre Channel over Ethernet (FCoE)

Consolidate server I/O connections

FCoE deployed with 10 GigE  
CNAs replace NICs and HBAs  
FCoE switch attaches to LAN  
Servers attach via ISLs from the FCoE switch to SAN

FCoE simplifies server, network, and storage infrastructure

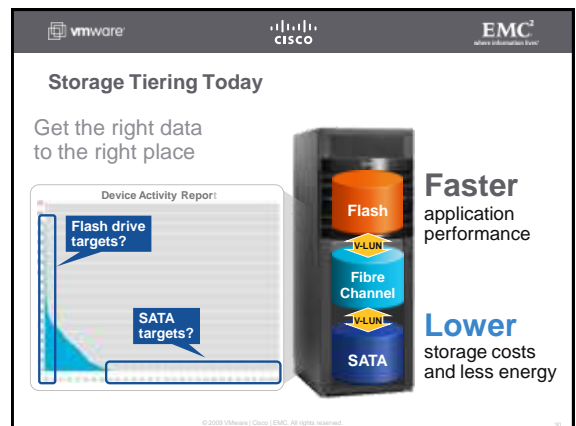

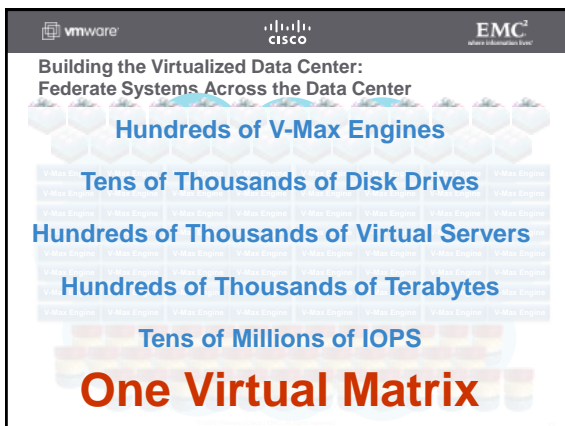

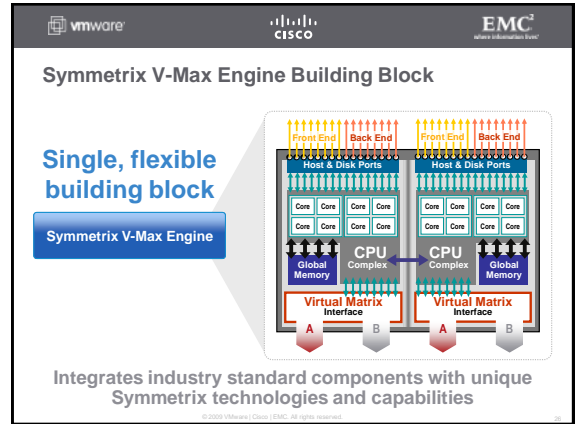

© 2009 VMware, Cisco, EMC. All rights reserved.

vmware | CISCO | EMC<sup>2</sup>

### Virtualization on Storage Layer

Provision Storage Capacity with SLA anytime, anywhere

© 2009 VMware, Cisco, EMC. All rights reserved.

**Lower Costs and Optimize Service Levels**

**17 percent lower storage costs**  
And reduced maintenance and software costs

**38 percent more drive IOPS**  
And more aligned with workloads

**32 percent less power and cooling**  
And more efficient use of space

**384 fewer drives (>70% Reduction)**  
144 Flash drives plus Fibre Channel drives plus SATA drives versus 528 Fibre Channel drives

© 2009 VMware, Cisco, EMC. All rights reserved.

**Simplify Management of Virtual Environments**

**Management Abstraction Enables Ease, Speed, and Automation**

- VMware infrastructure: Quickly provision resources on demand, Auto-provisioning, Virtual Provisioning
- Distributed Resource Scheduler, VMotion: Nondisruptive mobility of applications and data, FAST, Virtual LUNs
- High Availability, vStorage VMFS: Policy-based load balancing across physical resources, PowerPath
- vCenter Server: Centralized, automated management, reporting, and control, Ionix ControlCenter and VMware vCenter Server Plug-in

© 2009 VMware, Cisco, EMC. All rights reserved.

**Easy, Quick, and Automated Storage Provisioning for Virtual Servers with a Single Action**

**Traditional Mapping and Masking**

40 Individual Masking Operations  
5 ESX servers x 2 HBAs x 4 storage ports

**~160 clicks to complete**  
Includes initial configuration and repeated for every change or add

**Auto-provisioning Groups**

Single Setup to Build and Associate Groups

**15 clicks to complete**  
Simplifies initial configurations and all future changes and additions

© 2009 VMware, Cisco, EMC. All rights reserved.

**Driving Efficiency, Control, Choice**

**Avamar & DataDomain**  
Next Generation of Backup & Restore Solution

© 2009 VMware, Cisco, EMC. All rights reserved.

**De-Duplication: How it Works**

- Break data into atom (sub-file, variable-length segments of data)
- Send and store each atom only once
- backup repository

**At the source**—De-duplication before data is transported across the network  
**At the target**—Assures coordinated deduplication across sites, servers, and over time  
**Granular**—Small, variable-length sub-file segments guarantee most effective deduplication

© 2009 VMware, Cisco, EMC. All rights reserved.

**Where Can Data Deduplication Occur?**

**Source (Avamar)**

Client software agents identify repeated sub-file data segments at the source

Only new, unique segments are transferred across the network and stored to disk

Shorter backup window, reduces daily impact on physical/virtual infrastructure

**Target (Data Domain)**

Backup application sends native data to a target storage device

Data is deduplicated once it reaches the target – during or after the backup

Found in VTLs or LAN B2D appliances

Transparency to backup application offers users a "plug and play" experience

**Deduplication at Source**

**Deduplication at Target**

© 2009 VMware, Cisco, EMC. All rights reserved.

**Avamar: Real-World Results**  
 Avamar daily full backups versus traditional daily full backups

| Data Type   | Amount of Primary Data Backed Up | Amount of Data Moved Daily |
|---|----------------------------------|----------------------------|
| Windows file systems                                      | 3,573 GB                         | 6.1 GB                     |
| Mix of Windows, Linux, and UNIX file systems              | 5,097 GB                         | 11.7 GB                    |
| Engineering files on NAS (NDMP backups)                   | 3,265 GB                         | 24.2 GB                    |
| Mix of 20% databases, 80% file systems (Windows and UNIX) | 9,583 GB                         | 80.0 GB                    |
| Mix of Linux file systems and databases                   | 7,831 GB                         | 104.2 GB                   |

Source: EMC

While results will vary by data type and mix, Avamar can dramatically improve backup performance and efficiency

**Avamar's Innovative Architecture**

**U.S. Patent No. 6,826,711**

Redundant Array of Independent Nodes (RAIN) architecture

- Each server node includes CPU, memory, and internal disk storage
- Provides high availability and fault tolerance across nodes

Grid architecture for online scalability and performance

Daily Avamar server integrity checks

Data recoverability verified daily

RAID protection from disk failures

Available for Avamar software and Avamar Data Store

**Avamar Supported Operating Systems and Applications**

**Client operating systems supported**

- Microsoft Windows Server 2003 Standard and Enterprise
- Microsoft Windows 2000 Server and Advanced Server
- Microsoft Windows Server 2008
- Microsoft Windows XP, XP Professional, Vista
- Red Hat Linux 8.0
- Red Hat Enterprise Linux (RHEL) 3.0, 4.0, 5.0
- Solaris 8, 9, 10
- SUSE Linux Enterprise Server 8.2, 9, 10
- IBM AIX 5.2, 5.3, 6.1
- HP-UX 11.0, 11V1, 11V2, 11V3
- Mac OS X 10.4x, 10.5x
- NetWare 6.5
- Free BSD 6.2
- Novell Storage Services (NSS) OES 2
- SCO LINUX 7.1.3

**Application modules**

- Microsoft Office SharePoint Server 2007
- Microsoft Exchange 2000, 2003, 2007
- Microsoft SQL Server 7.0, 2000, 2005, 2008
- Oracle 9i, 10g, 10gR2, 11g
- IBM DB2 8.2.x, 9.5
- NDMP (EMC Celerra with DART 5.5, 5.6)
- NDMP (NetApp Data ONTAP 6.5, 7.0.4, 7.0.5, 7.0.6, 7.1x, 7.2)
- IBM Lotus Domino

**VMware infrastructure**

- VMware ESX server 3.0.x, 3.5, 3i
- VMware ESX 4
- ESX client operating system-certified using RHEL 4 client (support within virtual machines depends on VMware support of client operating system)

**No charge for client agents or application modules!**

**VMware Backup Challenges**

Virtualization changes server, application, and information paradigm... backup must evolve to deliver even greater consolidation and value

**Old Paradigm**

Physical environment: Low overall server utilization and little bandwidth for backup

20% resource utilization

**New Paradigm**

Virtual environment: High overall server utilization and plenty of bandwidth for backup

80% resource utilization

**Data Domain Basics**  
 Easy integration with existing environment

**Control Tier**

Backup & Archive Applications

- EMC
- symantec
- COMPTON
- Red Hat
- Software
- BakBone
- VERITAS

Target Tier: DD880 Appliance

DR Tier: DD880 Appliance

Replication

4U  
 2 - 6 ports  
 10 and 1 Gb Ethernet; 4 Gb Fibre Channel  
 RAID-5  
 5.4 to 71 TB usable capacity with shelves  
 1 TB or 500 GB 7.2k rpm SATA HDD in shelf  
 File system  
 NVRAM  
 N+1 fans and redundant, hot-plug power supplies

**Industry's Most Scalable Inline Deduplication Systems**

Software Options: OpenStorage, VTL, Replicator and Retention Lock
