

## **Job Description: Hardware Engineer I**

Imagine having the opportunity to evolve tomorrow's Internet technology today. A select number of top graduates will do just that as they put their endless study hours, creativity, and dreams to work developing technology that will change the way the world works, lives, plays and learns. Use your skills to create products and solutions that affect home, business, education and government networks.

If technology is your passion and algorithm development excites you, Cisco may be the place for you. As a Cisco Systems Development Engineer, you can select to develop network technology in voice, security, switching routing, storage, wireless and network management systems.

Requirements: BS in Computer Engineering, Electrical Engineering, and Computer Science, GPA of 3.0 or higher preferred.

Candidates must have graduated in the last 24 months

Candidates must already have a work authorization that would permit them to work for Cisco -- i.e., U.S. citizens, U.S. nationals, permanent residents, temporary residents (that is, individuals who have gone through the legalization program) refugees and asylees.

Position Locations: San Jose, CA; Research Triangle Park, NC; Boxborough, MA.
