

Stacey Scott

Stacey's background includes a Bachelors of Science from UCLA in Computer Science Engineering. Stacey got her start in the computer field as a computer engineer in the Hewlett Packard labs. She spent 2 years developing main frame operating systems code for HP's MPEXL Operating system and 11 years as a Business Analyst designing and implementing software applications and technology solutions for Fortune 1000 companies. This experience prepared Stacey to begin work with WebEx when the opportunity presented itself. Stacey was able to establish and deploy WebEx's customer training department, as the company grew from 24 to 400 employees. During this time, Stacey developed software to manage new customer on-boarding and product adoption, helping to drive the WebEx market share. Soon after, a top Fortune 500 telecommunications company approached Stacey about her previous tenure, and Elgia was founded in response to the opportunity. Since its inception, Stacey has expanded Elgia's training services to include remote online training classes, an on-brand technical support center that operates 24/7/365 to enhance the customer experience. Elgia continues to grow, incorporating top level service, web-based customer software development and hosting, project and customer management as well as product testing and integration. Year after year Elgia increases its revenue and recruits new talent to steer itself towards higher and higher levels of success.
