

■ A Limitless Future: CCIE Wireless Certification

The growing demand for people who can plan, build, run, and support wireless LANs across all access points has outpaced the IT talent supply worldwide. The Cisco CCIE Wireless certification validates that professionals have the expertise to meet this demand. With the latest, expert-level CCIE certification from Cisco, the market leader in WLAN technology, networking professionals can feel confident that their know-how has been certified by the most comprehensive wireless certification in the world today.

More than any other technology, wireless is transforming the way the world is connecting, growing, and driving business every day. A recent study commissioned by Cisco and conducted by Forrester Consulting found that there is a pervasive need for wireless networking skills. In fact, the study found that 36 percent of the global companies surveyed reported that they have dedicated wireless specialists in their IT organizations today, a number that is expected to almost double in the next five years.

Survey respondents also cited the importance of certifications in their professional development. The IT decision makers surveyed indicated that professional and technical certifications were second only to a four-year college degree in helping them determine the qualifications of job applicants to perform the duties of the job.
