# My Career

1. Think about a computer-related career that interests you. Describe that career here:

2. Describe the type of education that you'll need to achieve your career goal, such as special courses in high school, and two to four years of college, a technical school, graduate school, or medical school.

3. Consider how you are doing in school. Are you working hard enough to achieve your career goal? List the steps you need to take to pursue the career you want, such as reading more, participating in your school computer club, and studying harder in all your subjects.
