

Hacker Busters

Internet Music

Check out the music links from the Hacker Busters site. Go through the games and concentrate on the music.

Think about the Internet. If it had a sound, what would it be like? Would there be a rhythm? A beat? Would Internet music be different for messages traveling through wireless space than messages going through cables?

If you play an instrument or like to compose music, create your own "Internet Travels" song. You can even get some friends together to present the song to your class.

If you are not a musician, you can still make up your own Internet music. Ask your music teacher if the school has any rhythm instruments that you and your friends can use for this project. If no rhythm instruments are available, brainstorm ideas for making sounds with your keyboard, spoons, pans, rubber bands, water glasses, whistles, and other items. You could make your own Internet symphony.
