

## V2.1 UNSPSC codes

### Cisco E-Procurement Solutions - Ariba Punchout

The Universal Standard Products and Services Classification (UNSPSC) is an open global coding system that classifies products and services. The UNSPSC is used extensively around the world in the electronic catalogs, search engines, procurement application systems and accounting systems.

The following codes are used to classify Cisco products and service. These are the codes we have implemented in our eProcurement Solution.

<b>24102001</b>	Rack systems for rack mount electronic equipment
<b>26121609</b>	Network cable
<b>26121627</b>	Power Cord
<b>32101602</b>	Dynamic random access memory (DRAM)
<b>43162402</b>	Configuration management software
<b>43162613</b>	Switch or router software
<b>43171806</b>	Servers
<b>43172006</b>	Network interface cards
<b>43172313</b>	Hard drives
<b>43172701</b>	Hubs or concentrators
<b>43172702</b>	Routers
<b>43172714</b>	Network management system
<b>43172905</b>	Intelligent network switching system
<b>55111601</b>	Electronic software documentation or user manuals
<b>81111805</b>	Proprietary or licensed systems maintenance or support
