Cisco 5500 Series Wireless Controller: Enable Collaboration in Motion

The Cisco 5500 Series Wireless Controller supports the new 802.11n standard, providing at least nine times the throughput of educational institutions' existing 802.11a/g networks. Higher throughput, plus the ability to assign priority to delay-sensitive traffic, enables schools to use wireless devices for voice, video telephony, and video surveillance. The Cisco 5500 Series also frees up time for IT departments by automating the configuration and management of wireless access points and enforcing centralized security policies. It strengthens security by detecting "rogue" wireless access points installed by well-meaning employees so that the IT department can remove them.

Cisco Virtual Office: Replicate the Office Experience at Home

The Cisco Virtual Office solution provides all technologies needed to set up employees for telework:

- Employees receive a Cisco 800 Series Integrated Services Router (ISR) and a Cisco Unified IP Phone 7900. They simply connect the ISR to the router provided by their Internet service provider.
- The school deploys a Cisco 7200 Series Router, Cisco Secure Access Control server, and Cisco Security Manager software for policy, configuration, and identity controls.
- Cisco and its partners provide guidance for automating the deployment, relieving educational institution IT groups from manual configuration.

Cisco WebEx: Extend Instruction to Students at Home or In Other Schools

With Cisco WebEx you can bring remote students into the classroom, allowing them to see and hear what they would if they were physically present. Instructors can:

- Share anything on a computer screen or whiteboard.
- Pass control to students who are making presentations.
- Record sessions for self-paced learning.

Students can join a Cisco WebEx classroom session from PC, Mac, Linux, Unix, and Solaris systems or from an iPhone.
