

Collaborative Care

Cisco Clinical Connection Suite

The Collaborative Care solution from Cisco Systems® uses audio and video-conferencing technologies to interconnect teams on demand, leading to better decisions and more effective care. Part of the Cisco® Clinical Connection Suite, the system enables clinicians and first responders to consult as needed with colleagues or experts across campus, across town, or across the country. And in today's increasingly multilingual communities, clinicians can quickly contact offsite interpreters to improve communication between patients and care providers.

The Collaborative Care solution is a readily accessible, cost-effective audio and video-conferencing system. As easy to use as dialing a telephone, it fosters better communication among geographically dispersed team members. For example, first responders can send a video of injuries to emergency room personnel, who can recommend on-scene treatments and assemble teams prior to arrival at the hospital.

As a component of the Cisco Clinical Connection Suite, the Collaborative Care system is a combination of Cisco wireless and video phones, Cisco CallManager, a central audio and videoconferencing system, Cisco MeetingPlace® software, and a Cisco Medical-Grade network. The integrated screen on Cisco phones can display video and text or waveform data. Cisco MeetingPlace and audio and videoconferencing solutions centrally control and switch conference participants. The Cisco network integrates voice, video, and data into a single infrastructure, making videoconferencing systems easier and less expensive to deploy and manage than a separate system.

To learn more about Collaborative Care and the Cisco Clinical Connection Suite, contact your Cisco representative or reseller today, or visit us on the Web at:
