

# Rockwell Automation and Our EtherNet/IP™ Ecosystem of Partners: Cisco, Panduit and Fluke Networks.

## Together, developing solutions to meet the needs of IT.

Are you required to support convergence of industrial and enterprise networks?

Have you experienced network disruption when a production machine is connected to your network?

Have you been disappointed by industrial networks that claim to be standard Ethernet?

Have you experienced challenges when integrating your business ERP with the production MES?

When you are responsible for the design, deployment and/or maintenance of the plants' networks, you need simple technology and proven solutions developed by the companies who know your needs best.

**Our EtherNet/IP ecosystem of partners work together to drive IT best practices into industrial networking.**

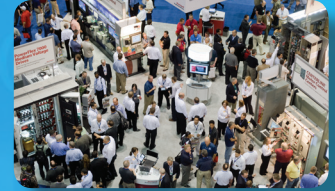

Design and deploy with tomorrow in mind. One network, technology EtherNet/IP, can deliver the security and reliability using standard Ethernet and TCP/IP.

Join us at Automation Fair 2011 in Chicago, and walk away with the knowledge of how to successfully design and deploy a robust and secure plantwide network infrastructure.

Visit the Plantwide Infrastructure booth (145) and experience the best we have to offer in one place. During the event, attend our technical sessions and workshops.

#### Don't miss:

- **Cisco** focusing on Industrial Intelligence enabling secure network access, cloud computing and mobility and collaboration solutions (booth 239)
- **Panduit** focusing on enterprise and industrial automation Unified Physical Infrastructure (UPI) (booth 245)
- **Fluke Networks** focusing on common tool sets for enterprise and industrial automation applications (booth 135)
- **Information Software** with solutions for Levels 3 and 4 of the Converged Plantwide Ethernet Architectures (booth 543)

#### Enroll in:

**Workshops** – One and a half hour, in-depth demonstrations and presentations

- W5: Robust, Secure Plantwide EtherNet/IP Infrastructure  
Rockwell Automation, Cisco, Panduit, Fluke Networks
- W6: Achieve Secure Remote Access to Plantwide Applications  
Rockwell Automation, Cisco

**Technical Sessions** – One hour sessions

- T41: Security: Practical security solutions for Industrial Control System (ICS)
- T43: Wireless: Applying Plantwide Industrial Wireless Communications for Cost Savings  
Rockwell Automation, Cisco
- T8: Fiber Optic Application Best Practices for EtherNet/IP  
Rockwell Automation, Panduit
- T31: Using FactoryTalk VantagePoint Software to Combine Multiple Data Sources into One Reporting Solution
- T10: Networks: Future Trends in Industrial Networking
