most once per\n * every `wait` milliseconds. The throttled function comes with a `cancel`\n * method to cancel
delayed `func` invocations and a `flush` method to\n * immediately invoke them. Provide `options` to indicate
whether `func`\n * should be invoked on the leading and/or trailing edge of the `wait`\n * timeout. The `func` is
invoked with the last arguments provided to the\n * throttled function. Subsequent calls to the throttled function
return the\n * result of the last `func` invocation.\n *\n * **Note:** If `leading` and `trailing` options are `true`,
`func` is\n * invoked on the trailing edge of the timeout only if the throttled function\n * is invoked more than
once during the `wait` timeout.\n *\n * If `wait` is `0` and `leading` is `false`, `func` invocation is deferred\n *
until to the next tick, similar to `setTimeout` with a timeout of `0`.\n *\n * See [David Corbacho's article](https://css-
tricks.com/debouncing-throttling-explained-examples/) for details over the differences between `_.throttle` and
`_.debounce`.\n *\n * @static\n * @memberOf _\n * @since 0.1.0\n * @category Function\n * @param {Function}
func The function to throttle.\n * @param {number} [wait=0] The number of milliseconds to throttle invocations
to.\n * @param {Object} [options={}] The options object.\n * @param {boolean} [options.leading=true]\n *
Specify invoking on the leading edge of the timeout.\n * @param {boolean} [options.trailing=true]\n * Specify
invoking on the trailing edge of the timeout.\n * @returns {Function} Returns the new throttled function.\n *
@example\n *\n * // Avoid excessively updating the position while scrolling.\n * jQuery(window).on('scroll',
_.throttle(updatePosition, 100));\n *\n * // Invoke `renewToken` when the click event is fired, but not more than
once every 5 minutes.\n * var throttled = _.throttle(renewToken, 300000, { 'trailing': false });\n *\n
jQuery(element).on('click', throttled);\n *\n * // Cancel the trailing throttled invocation.\n *
jQuery(window).on('popstate', throttled.cancel);\n *\n\nfunction throttle(func, wait, options) {\n  var leading = true,\n
      trailing = true;\n\n  if (typeof func != 'function') {\n  throw new TypeError(FUNC_ERROR_TEXT);\n  }\n  if
(isObject(options)) {\n  leading = 'leading' in options ? !!options.leading : leading;\n  trailing = 'trailing' in
options\n  ? !!options.trailing : trailing;\n  }\n  return debounce(func, wait, {\n  'leading': leading,\n  'maxWait':
wait,\n  'trailing': trailing\n });\n }\n\n/**\n * Checks if `value` is the\n * [language type](http://www.ecma-

dom.esm.js';\n\n/**\n * React currently throws a warning when using useLayoutEffect on the server. To\n * get
around it, we can conditionally useEffect on the server (no-op) and\n * useLayoutEffect in the browser. We
occasionally need useLayoutEffect to\n * ensure we don't get a render flash for certain operations, but we may
also\n * need affected components to render on the server. One example is when setting\n * a component's
descendants to retrieve their index values.\n *\n * Important to note that using this hook as an escape hatch will
break the\n * eslint dependency warnings unless you rename the import to `useLayoutEffect`.\n * Use sparingly only
when the effect won't effect the rendered HTML to avoid\n * any server/client mismatch.\n *\n * If a
useLayoutEffect is needed and the result would create a mismatch, it's\n * likely that the component in question
shouldn't be rendered on the server at\n * all, so a better approach would be to lazily render those in a parent\n *
component after client-side hydration.\n *\n *
https://gist.github.com/gaearon/e7d97cdf38a2907924ea12e4ebdf3c85\n * https://github.com/reduxjs/react-
redux/blob/master/src/utils/useIsomorphicLayoutEffect.js\n *\n * @param effect\n * @param deps\n */\n\nvar
useIsomorphicLayoutEffect = /*#__PURE__*/canUseDOM() ? useLayoutEffect : useEffect;\n\nexport {
useIsomorphicLayoutEffect };", "import { useState, useEffect } from 'react';\nimport { useIsomorphicLayoutEffect
} from '@reach/utils/use-isomorphic-layout-effect';\n\n/**\n * Welcome to @reach/auto-id!\n *\n * Let's see if we can
make sense of why this hook exists and its\n * implementation.\n *\n * Some background:\n * 1. Accessibility
APIs rely heavily on element IDs\n * 2. Requiring developers to put IDs on every element in Reach UI is both\n *
cumbersome and error-prone\n * 3. With a component model, we can generate IDs for them!\n *\n * Solution 1:
Generate random IDs.\n *\n * This works great as long as you don't server render your app. When React (in\n * the
client) tries to reuse the markup from the server, the IDs won't match\n * and React will then recreate the entire
DOM tree.\n *\n * Solution 2: Increment an integer\n *\n * This sounds great. Since we're rendering the exact same
tree on the server\n * and client, we can increment a counter and get a deterministic result between\n * client and
server. Also, JS integers can go up to nine-quadrillion. I'm\n * pretty sure the tab will be closed before an app never
needs\n * 10 quadrillion IDs!\n *\n * Problem solved, right?\n *\n * Ah, but there's a catch! React's concurrent
rendering makes this approach\n * non-deterministic. While the client and server will end up with the same\n *
elements in the end, depending on suspense boundaries (and possibly some user\n * input during the initial render)
the incrementing integers won't always match\n * up.\n *\n * Solution 3: Don't use IDs at all on the server; patch
after first render.\n *\n * What we've done here is solution 2 with some tricks. With this approach, the\n * ID
returned is an empty string on the first render. This way the server and\n * client have the same markup no matter
how wild the concurrent rendering may\n * have gotten.\n *\n * After the render, we patch up the components with
an incremented ID. This\n * causes a double render on any components with `useId`. Shouldn't be a problem\n *
since the components using this hook should be small, and we're only updating\n * the ID attribute on the DOM,
nothing big is happening.\n *\n * It doesn't have to be an incremented number, though--we could do generate\n *
random strings instead, but incrementing a number is probably the cheapest\n * thing we can do.\n *\n *
Additionally, we only do this patchup on the very first client render ever.\n * Any calls to `useId` that happen
dynamically in the client will be\n * populated immediately with a value. So, we only get the double render after\n *
server hydration and never again, SO BACK OFF ALRIGHT?\n *\n\nvar serverHandoffComplete = false;\nvar id =
0;\n\nvar genId = function genId() {\n  return ++id;\n};\n\n/**\n * useId\n *\n * Autogenerate IDs to facilitate WAI-
ARIA and server rendering.\n *\n * Note: The returned ID will initially be `null` and will update after a\n *
component mounts. Users may need to supply their own ID if they need\n * consistent values for SSR.\n *\n * @see
