How to Change the Language of the Switch Web-based Utility

Objective

One of the product features of a switch is the localization where you can select from multiple language options. Product documentation and web-based utility are translated according to your preferred language when accessing them from the switch, after changing the language.

This article will show you how to change to your preferred switch web-based utility language.

Note: This article assumes that you have already downloaded your preferred language from the <u>Cisco Download Center</u>.

Applicable Devices

- Sx250 Series
- Sx350 Series
- SG550XG

Software Version

• 2.2.0.66

Change the Language

Step 1. Log in to the switch web-based utility.

Step 2. Click the drop-down arrow under Language at the top portion of the page then click **Download Language**. By default, it is set to English.

🚫 Save	cisco	Language:	English	•
			English	
			Download Language	

Note: If it is your first attempt to change the language, you will be automatically directed to the File Operations page. If not, go to **Administration > File Management > File Operations**.

Getting Started	File Operations
Dashboard	
Configuration Wizards	Operation Type:
Search	 Backup File
 Status and Statistics 	 Duplicate
 Administration 	Destination File Type: 🔘 Running Configuration
System Settings User Accounts Idle Session Timeout Fime Settings	 Startup Configuration Mirror Configuration Logging File Language File
 System Log File Management Firmware Operations 	Copy Method: HTTP/HTTPS USB Internal Flash
File Operations File Directory	File Name: Choose File No file chosen
Reboot Discovery - Bonjour	Apply Cancel

Step 3. Click the **Update File** radio button under Operation Type. This is the only selectable operation for language file download.

Operation Type:	Update File	
	0	Backup File
	\bigcirc	Duplicate

Step 4. Click the Language File radio button under Destination File Type.

Destination File Type:	\bigcirc	Running Configuration
	\bigcirc	Startup Configuration
		Mirror Configuration
	\bigcirc	Logging File
	۲	Language File

Step 5. Click the copy method that you want to use. The available options are as follows:

- HTTPS/HTTPS allows you to choose a pre-downloaded file from a website.
- USB allows you to download the language file stored via a USB flash drive.
- Internal Flash allows you to copy the language file from the internal flash memory.

Note: In this example, HTTP/HTTPS radio button was chosen.

Copy Method: OUSB Internal Flash

Step 6. Click **Choose File** and choose the language file that you have already predownloaded. Then, click **Open**. If you have chosen USB or Internal Flash in Step 5, enter the full path and file name.

File Name: Choose File No file chosen

Note: In the image below, the Chinese language file with the filename *Sx350_550_LANG_zh_CN_2.1.0.50.lang* was chosen as an example.

	File name:	Sx350_550_LANG_zh_CN_2.1.0.50.li 🝷	All Files		-
			Open	Car	icel

Step 7. Wait until the processing of data is complete. It should then show a Success message.

Step 8. A dialog box appears confirming that the language list was modified. Click **OK**.

The language list was modified. Please select one of the available languages.

Step 9. To verify if the newly downloaded language is now available, click the drop-down arrow under Language at the top portion of the page. You should now have the additional language option. Click your preferred language.

Note: In this example, the Chinese language was chosen.

cisco	Language:	English 🔹	
		English	
		简体中文	
		Download Language	
		Delete Language	

You should now have successfully changed the language of your switch web-based utility.
