

# More Productive, Services-Centric Operations

## Benefits

### Ease of Management

GUI replaces line commands. Before, creating a new VLAN involved handling 20-30 devices. Now, it only takes one action.

### Better Visibility into Infrastructure

Can see exactly what's going on, for example, with video bottlenecks. Issues are fixed correctly first time, faster, and with less effort.

### Unified Services Approach

ACI gives network engineers greater services focus, bringing people and process closer together.

Systems Integrator

## Cisco Solution

- Cisco Nexus 9000 Application-Centric Infrastructure (ACI)
- Spans two data centers and supports Netcloud Managed Services
- First partner worldwide to achieve Cisco ACI accreditation

“Our storage and server teams have taken a services approach for some time. Now, network ops are pulling in the same direction. On top of this we expect to make a 40 percent productivity saving too.”

- Reto Schilt-Lu, Chief Operating Officer, Netcloud AG
