

Bringing it all together: CMR-On Prem

This setup allows for: CMR On-prem (all components above required)

But needs TMS-PE (TelePresence Management Suite Provisioning Extension). TMS-XE (TelePresence Management Suite Scheduling Extension) is strongly advised for usability. This is a required component for Exchange integration

Bringing it all together: CMR-Hybrid (WXeTP)

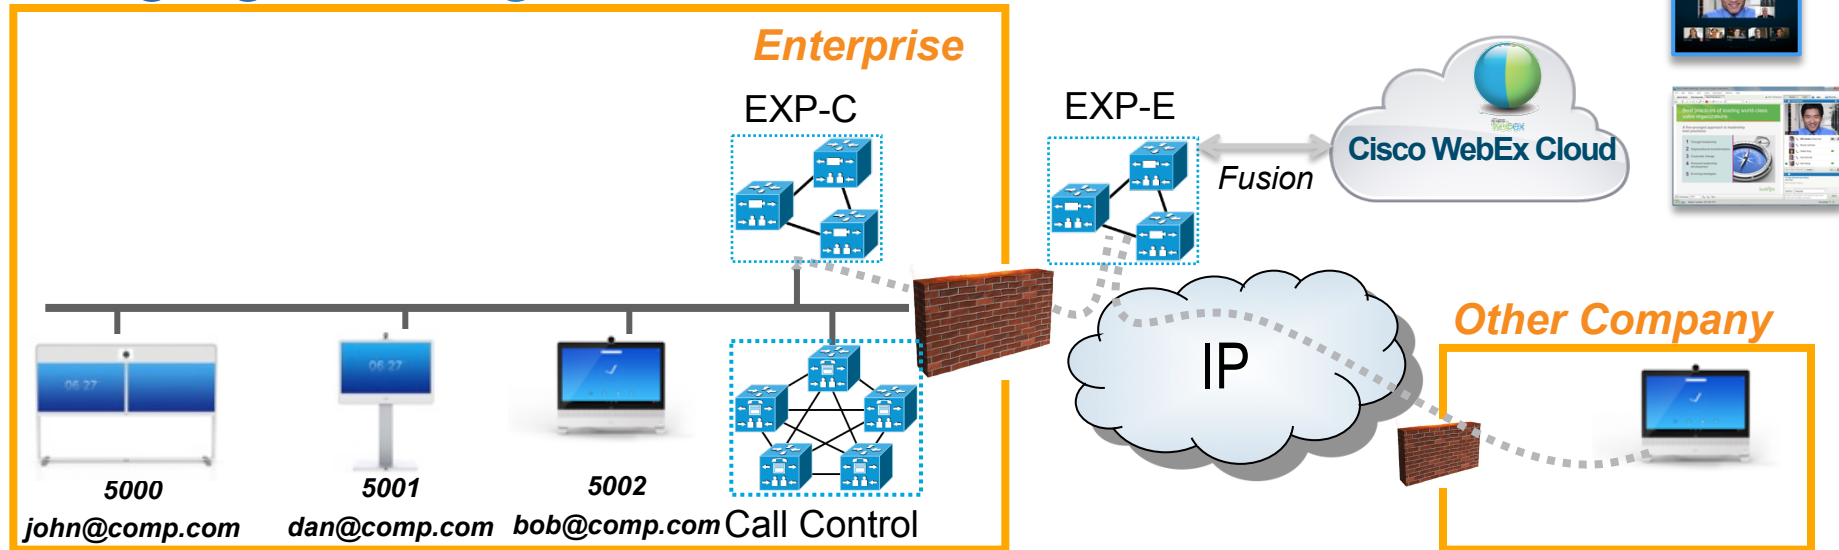

This setup allows for: CMR Hybrid (WXeTP)

TMS scheduling through conductor is a roadmap item. Any bridges involved in WXeTP should not be registered to the Conductor.

(= Conductor is not supported in this setup at present – July 2014)

Bringing it all together: CMR-Cloud

This setup allows for: CMR Cloud

The bridge is now in the cloud. Call Control on prem is **highly recommended** (even if not strictly required). **WebEx is the Center of command for the UE, Scheduling via Productivity Tools or WebEx Site webpage.**
