Overview

Upgrade to Secure Access

Upgrade your organization to Secure Access's next-generation cloud-delivered Internet protections and access controls.

[Upgrade Later](#) [Start Upgrade](#)

3. Cisco Security Cloud لؤخد لئجست نئكمت نمض ادب دح، ةققرتلا ريدم ةحفص ي ف

Upgrade to Cisco Secure Access

This upgrade process involves migrating data and configurations to your new Secure Access organization.

The result is that all current identity traffic is steered through Secure Access. No protections are lost. [Help](#)

0/4 steps complete

1

Prerequisites

Complete these steps before beginning the upgrade process. If you have previously completed a step, mark it

1. Enable Cisco Security Cloud Sign On

Enable Security Cloud Sign On as your authentication method.

Start

2. Update VAs and AD connectors

Update your virtual appliances and Active Directory Connectors to their latest versions.

Start

☐ Mark as done

4. SAML رفومك SCC طبرل SAML تامولعم ةحول مدختسم نيوكت نمض SAML نيكمم ددح .
تامولعمل ةحول لوخد ليحستل:

The screenshot shows the Cisco Umbrella Authentication page. At the top, there's a header with the Cisco logo and the word "Authentication". Below the header, a message states: "Set up single sign-on via SAML for Umbrella dashboard users and check on the status of two-step verification for your account." The main content area is divided into two sections. The first section is titled "Prerequisite 1 : Enable Cisco Security Cloud Sign On" and includes a button "Return to Upgrade Manager". Below this, there's a "SAML Dashboard User Configuration" section. It contains a paragraph explaining that Cisco Umbrella supports SAML for logins and provides a link to "Umbrella's Help". Below the paragraph, there are two fields: "Status" with a radio button selected for "Disabled" and "Provider" set to "None". To the right of these fields, there's an "ENABLE SAML" button, which is pointed to by an orange arrow labeled "Enable". The second section is titled "Two-Step Verification" and contains a paragraph explaining that this indicates whether two-step verification (2FA) is enabled. Below the paragraph, there are two fields: "Status" with a radio button selected for "Enabled".

5. نيوكت رابتخا راىخ مادختساب SAML نيوكت رابتخا:

The screenshot shows the "Verify Cisco Security Cloud Sign On" step of the SAML configuration process. It is titled "Step 1 of 2" and "Verify Cisco Security Cloud Sign On". The text explains that using Cisco Security Cloud Sign On as a SAML provider requires all accounts in the organization to already have existing Cisco Security Cloud Sign On accounts, and for those accounts to have the Cisco Umbrella app assigned. It provides a link to "https://sign-on.security.cisco.com". Below the text, it says "Please verify your Cisco Security Cloud Sign On account by clicking the 'Test Configuration' button below." There is a "TEST CONFIGURATION" button, which is pointed to by an orange arrow. At the bottom right, there are three buttons: "CANCEL", "PREVIOUS", and "NEXT".

SAML Dashboard User Configuration

Step 1 of 2

Verify Cisco Security Cloud Sign On

Using Cisco Security Cloud Sign On as your SAML provider for Umbrella requires all accounts in this organization to already have existing Cisco Security Cloud Sign On accounts, and for those accounts to have the Cisco Umbrella app assigned. You can create Cisco Security Cloud Sign On accounts and assign the Cisco Umbrella app at <https://sign-on.security.cisco.com>.

Please verify your Cisco Security Cloud Sign On account by clicking the "Test Configuration" button below.

TEST CONFIGURATION

✔ Your SAML settings have been properly configured!

اهب ني مدختسم المالعإو تاريغي تالظح

SAML Dashboard User Configuration

Step 2 of 2

Save and Notify

After clicking 'Save', all users in your organization will be required to use the single sign-on service rather than a password. Umbrella will send an email to every administrative user in the dashboard, stating their password has been removed from their account.

- ☒ If you disable the single sign-on service in the future, all users in your dashboard will be emailed a link to reset their passwords and their old passwords are not restored.
- ☒ Block page bypass users will no longer work once SAML is enabled. Instead, you must use codes for bypassing block pages. For more information, [read here](#).

Two step verification with Umbrella is not available when SAML is enabled. Instead, use the two factor options available with your SSO provider.

PREVIOUS

SAVE AND NOTIFY USERS

SAML: نيوكت لم تكا

SAML Dashboard User Configuration

Cisco Umbrella supports Security Assertion Markup Language or SAML for logins to the Umbrella dashboard. This allows you to provide single sign-on (SSO) access to Umbrella using enterprise identity providers such as Okta, OneLogin, Azure and Ping Identity. SAML SSO is available to all Cisco Umbrella dashboard users. For more information, see Umbrella's [Help](#).

- انه ةروصلال لعل ةدوجومال هذه لثم ةحفصل لعل لصحت نأ بجي ،لامتكالال دنع

Start Upgrade

Done

Clicking Upgrade generates your new Secure Access organization (and dashboard) and copies your Umbrella configurations to Secure Access. Umbrella continues to operate during this process and your organization is always protected. [Help](#)

Upgrade Success.

Your new Secure Access organization has been successfully generated and is now listed in Umbrella's navigation menu. To review your new Secure Access deployment, click Secure Access.

Umbrella DNS policies have been copied and converted to Secure Access policy rules. All deployment and policy components, including identities (sources) and Admin settings, are shared between Secure Access and Umbrella. Any changes to these shared components are automatically updated in the other organization.

Application settings and policy are not shared between the two dashboards, so changes are not reflected between Secure Access and Umbrella.

Umbrella and Secure Access are now running simultaneously, but traffic is only steered through Umbrella. Complete the upgrade process and redirect traffic to Secure Access.

[View rules in Secure Access](#)
