Group: Intune

Secure Client Management

Cisco Secure Client bundles the Cisco Security suite of products to your Windows devices so that installation on the endpoint is simpler. With a centralized management interface, upgrades across all our endpoint products are a breeze. [Learn More](#)

Secure Client deployments can be configured on Deployment Management page in the Cisco XDR console.

The screenshot shows the Cisco XDR Client Management interface. On the left, a sidebar lists modules: Control Center, Incidents, Investigate, Intelligence, Automate, Assets, Client Management (selected), and Administration. Under Client Management, there's a sub-section for 'Intune Test' which includes 'Windows / amd64'. The main content area displays several configuration panels:

- Cloud Management (Required)**: A panel with a toggle switch set to 'On'. It describes Cisco Cloud Management as a module that enables cloud-driven profile and software updates. It also lets the endpoint use Cisco Secure Client Cloud Management infrastructure to manage deployments. It shows 'Version Control' with 'Channel: Latest' and 'Version: 1.0.4.447'. It also lists 'Cloud Management Profile' and 'Cloud Management Default Profile'.
- Secure Endpoint**: A panel with a toggle switch set to 'On'. It describes Cisco Secure Endpoint as an EDR module that integrates prevention, detection, threat hunting, and response capabilities. It shows 'Version Control' with 'Channel: Recommended' and 'Version: 8.4.4.30467'. It also lists 'Secure Endpoint Instance' and 'Group'.
- Endpoint Visibility Module**: A panel with a toggle switch set to 'Off'. It describes the Cisco Endpoint Visibility Module (EVM) as providing enhanced endpoint telemetry capture for enriched threat context and enhanced correlated detection in Cisco XDR. It shows 'Version Control' with 'Version: N/A'.
- Secure Client**: A panel with a toggle switch set to 'On'. It shows 'Version Control' with 'Channel: Recommended' and 'Version: 5.1.8122'. It lists 'AnyConnect VPN Profile' (with 'Start Before Logon' checked), 'VPN' (with 'Umbrella' checked), and 'Diagnostic and Detection Tool'.
- Secure Access Root Certificate**: A panel with a toggle switch set to 'Off'.
- Zero Trust Access**: A panel with a toggle switch set to 'Off'.

A red box highlights the 'Full Installer' button in the top right corner of the Cloud Management panel. The browser address bar shows the URL: https://xdr.us.security.cisco.com/client-management/deployments/.

<#
    https://learn.microsoft.com/en-us/intune/intune-service/apps/apps-win32-add#step-4-detection-rules
    The app gets detected when the script both returns a 0 value exit code and writes a string value to
    the standard output (STDOUT) stream.
    The Intune agent checks the results from the script. It reads the values written by the script to
    the standard error (STDERR) stream, and the exit code. If the script exits with a nonzero value, the
    application detection status isn't installed. If the exit code is zero and STDOUT has data, the
    detection status is installed.
