ةزيملا	فصولا
SecureX قيسنت و SecureX ل نسحم جم د	<p>We have streamlined the SecureX integration process. Now, as long as you already have a SecureX account, you just choose your cloud region on the new Integration > SecureX page, click Enable SecureX, and authenticate to SecureX. The option to send events to the cloud, as well as to enable Cisco Success Network and Cisco Support Diagnostics, are also moved to this new page. When you enable SecureX integration on this new page, licensing and management for the systems's cloud connection switches from Cisco Smart Licensing to SecureX. If you already enabled SecureX the "old" way, you must disable and re-enable to get the benefits of this cloud connection management. Note that this page also governs the cloud region for and event types sent to the Secure Network Analytics (Stealthwatch) cloud using Security Analytics and Logging (SaaS), even though the web interface does not indicate this. Previously, these options were on System > Integration > Cloud Services. Enabling SecureX does not affect communications with the Secure Network Analytics cloud; you can send events to both. The management center also now supports SecureX orchestration—a powerful drag-and-drop interface you can use to automate workflows across security tools. After you enable SecureX, you can enable orchestration.</p>

SecureX Setup

This feature allows Secure Firewall Management Center to integrate with other SecureX services via SecureX ribbon. [Learn more](#)

1 **Cloud Region**
This setting determines where events are sent to, if configured to send to the cloud, as well as data generated by the Cisco Success Network and Cisco Support Diagnostics tools.
Current Region:

2 **SecureX Enablement**
After completing this configuration, the SecureX ribbon will show up at the bottom of each page. [Learn more](#)

Warning: SecureX is enabled for US Region. You will need to save your configuration for this change to take effect.

Grant Application Access

Please verify the code provided by the device.

21D41262

The application **FMC** would like access to your SecureX account. Specifically, **FMC** is requesting the following:

- **casebook:** Access and modify your casebooks
- **enrich:** Query your configured modules for threat intelligence (*enrich:read*)
- **global-intel:** Access AMP Global Intelligence
- **inspect:** Extract Observables and data from text (*inspect:read*)
- **integration:** Manage your modules (*integration:read*)
- **notification:** Receive notifications from integrations
- **orbital:** Orbital Integration.
- **private-intel:** Access Private Intelligence
- **profile:** Get your profile information
- **registry:** Manage registry entries (*registry/user/ribbon*)
- **response:** List and execute response actions using configured modules
- **sse:** SSE Integration. Manage your Devices.
- **telemetry:** collect application data for analytics (*telemetry:write*)
- **users:** Manage users of your organisation (*users:read*)
