Web server connections will be restarted	
Enabling SSO and importing the metadata will cause web services to restart upon completion of the wizard. All affected web applications will drop their connection momentarily and need to be logged into again.	
Click "Export All Metadata" button	
If the server metadata has not already been uploaded to the IdP, it can be done before running the wizard. You can obtain the server metadata by clicking the "Export All Metadata" button on the main page. Then go to the IdP and upload the file.	
Continue Cancel
