Cisco EnergyWise Suite

The Cisco EnergyWise Suite

Imagine seeing, measuring, and managing all of the energy being used in your company. Just like when you leave work in the evening and you put your computer to sleep, all of your IT equipment goes to sleep when you leave. Your servers, routers and switches, laptops, monitors, IP phones, wireless access points, and printers. You know you're saving money.
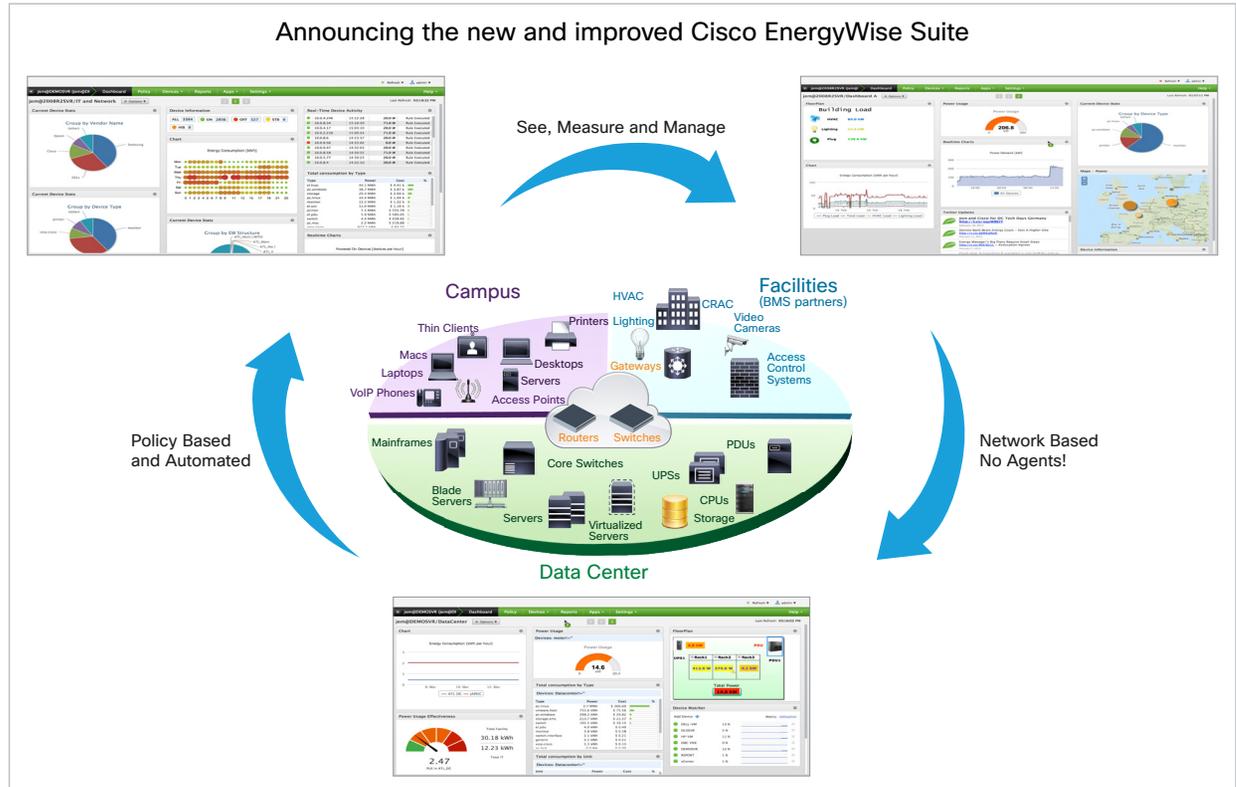

The Cisco EnergyWise™ Suite helps you see what and where energy is being used. You can measure the usage and can reduce energy by adjusting the power to match the amount of work it needs to do. This keeps data centers running efficiently and cuts energy costs. You start getting savings in days, not weeks or months. Using automated features, you'll see your energy used, wasted, and saved for every device connected to the network across your entire enterprise.

Cisco EnergyWise Technologies and Services Solve Energy Problems

- With the rising cost of energy, you have increasing expenses.
- You can't invest in needed capacity because of energy constraints.
- Without a way to see your energy use, it is difficult to improve your situation.

Announcing the new and improved Cisco EnergyWise Suite

With Joulex, Cisco EnergyWise Gains Great New Features

With the addition of JouleX Energy Manager (JEM) software, Cisco EnergyWise Suite is easy to use and has powerful management capabilities. Cisco EnergyWise management software lets you capture the full power of the Cisco EnergyWise protocols built into your routers and switches. Cisco EnergyWise management software can manage all of your network-connected devices, including phones, printers, monitors, virtual servers, HVAC systems, and more, not just the Cisco devices.

Cisco EnergyWise Management for Distributed Office and Data Center

This management software provides a simple way to see, measure, and manage the energy use for all network-connected devices in both distributed office and data center versions. The two versions are designed for the environments in which they will be used.

Cisco EnergyWise Discovery and Optimization Services

You can get started with the discovery service, or you can go directly to the optimization service. Either way, step one is to figure out where you are with your energy management today. Steps two and three only exist in the optimization service. They get you up and running and then make sure everything is working great and customized to your needs.

Benefits of Cisco EnergyWise Suite

- Increase data center energy efficiency by seeing actual energy consumption instead of relying on faceplate data.

- Reduce your overall IT energy costs by as much as 35 percent with this innovative energy management suite of tools and services.

- Reduce your cost of ownership up to $50/port/year for networking equipment.

- With our assessment service, determine exactly what you need and get an ROI plan to help you get the funding inside your company.

- With our full solution, you are days away from seeing ROI, not weeks or months. For a fast ROI, use our solution and optimization service.

Why Cisco?

We combine the experience of the world's leader in networking with unique, network-based energy management software. Only the Cisco EnergyWise Suite uses your existing network infrastructure to save energy and meet your ROI goals.
