Features and Benefits.

Cisco Collaborative Knowledge strategically combines key workplace services to redefine the customer and employee experience:

- **Expert Discovery:** Provides just-in-time access to expert resources using WebEx and Jabber. Connect safely one-to-one or with multiple experts simultaneously inside the firewall to share knowledge, and solve business challenges.
- **Knowledge Center:** Preserves best practices and organizational knowledge shared across the organization in an enterprise-wide digital repository.
- **Social Communities:** Fosters real-time learning, problem solving and innovation through social communities, discussion forums, blogs, and crowdsourcing.
- **Learning Management System:** Standardizes formal and informal learning and development across the organization through a centralized learning management system. Learners can browse course offerings, register for a course through the training catalog, or create personalized learning plans to support career and development goals.

Additionally, two breakthrough innovations round out the platform:

- **Real-Time Collaboration Tools:** Cisco WebEx and Jabber real-time collaboration tools make it easy for everyone to meet, share ideas and stay connected anytime, anywhere in the cloud.
- **Visual Knowledge Mapping and Analytics Service:** This service assesses organizational knowledge, learning, and interests in real-time. By combining advancements in keyword ranking and semantics graphing with data

aggregation and crowdsourcing, the software can create visual “snapshots” of individuals, teams and departmental strengths and gaps to guide learning and development investment strategies.
