The Cisco Webex Board: An all-in-one team collaboration device for meeting rooms and spaces – from huddle to boardrooms

The Cisco Webex™ Board is a team collaboration device that combines wireless presentation, digital white boarding, and video conferencing in a single device. The Webex Board is ideal for creative environments where co-creation with local and remote participants is the primary focus. It is a cloud- and touch-based system that securely connects teams and their content in physical rooms with virtual teams and meeting spaces. The Board resides in physical meeting rooms but is connected to Cisco Webex service to facilitate continuous workflow before and during the meeting, and even after everyone has left the physical room. Through the Cisco Webex Teams app, team members both in the physical conference room and attending remotely can meet, message, call, and white board from anywhere through their Webex Teams app on their device of choice.

Cisco Webex Board benefits

- **All-in-one solution:** Available in 55-, 70- and 85-inch versions, Webex Board is the only tool you need to collaborate in physical meeting rooms from huddles to boardrooms

- **Simplicity:** A fully touch-based system that is intelligent, intuitive, and effortless to use; supports simplified one-button-to-push meeting-join experience for fast meeting start and consistency with rest of Cisco video devices

- **Continuous teamwork:** The cloud-based platform lets your work continue before, during, and after the meeting is over on any Webex Teams app

- **Cost-effective, scalable and secure:** Cloud registration makes it affordable and easy to deploy in all of your conference rooms, with end-to-end encryption

Bring your teams and work with you wherever you are

The Cisco Webex Board, together with the Cisco Webex service and Webex Teams app, offers an integrated and comprehensive life-cycle approach to teamwork that is as yet unimagined, and thus unmatched, by any other solution on the market. The Webex Board itself performs the key activities that teams need to work together in a physical meeting room. The Webex service connects the board to a virtual space so work can continue even after the meeting has ended.

Key capabilities of the Cisco Webex solution include:

- **Wireless presentation:** Share your presentation, locally in the room or remotely, without any need for wires, dongles, adapters, or typing in PIN codes

- **Digital whiteboard:** Easily white board with the Cisco Webex Pen or your finger and automatically save content to a Webex Teams virtual space; multiple people can white board – in the room or remotely on any Webex Teams app. You can even annotate on any content that you've shared to the Board

- **Audio/video conferencing system:** Make your high-definition video or high-fidelity audio calls directly on the Webex Board

- **Continuous workflow:** Connect the Webex Board to a virtual Webex Teams space and your whiteboard creations and other shared documents will live there persistently and securely, to be reviewed and edited by any member of the team from another Webex Board or any Webex Teams app-enabled device

The Cisco Webex Board is the latest addition to the portfolio of Cisco video and audio conferencing devices that register to the Cisco Webex, including the Cisco Webex Room Series, the Cisco Webex DX80, Cisco MX and SX Series, the Cisco IP Phone 7800 and 8800 Series.
