

Cisco Tetration SaaS for Europe

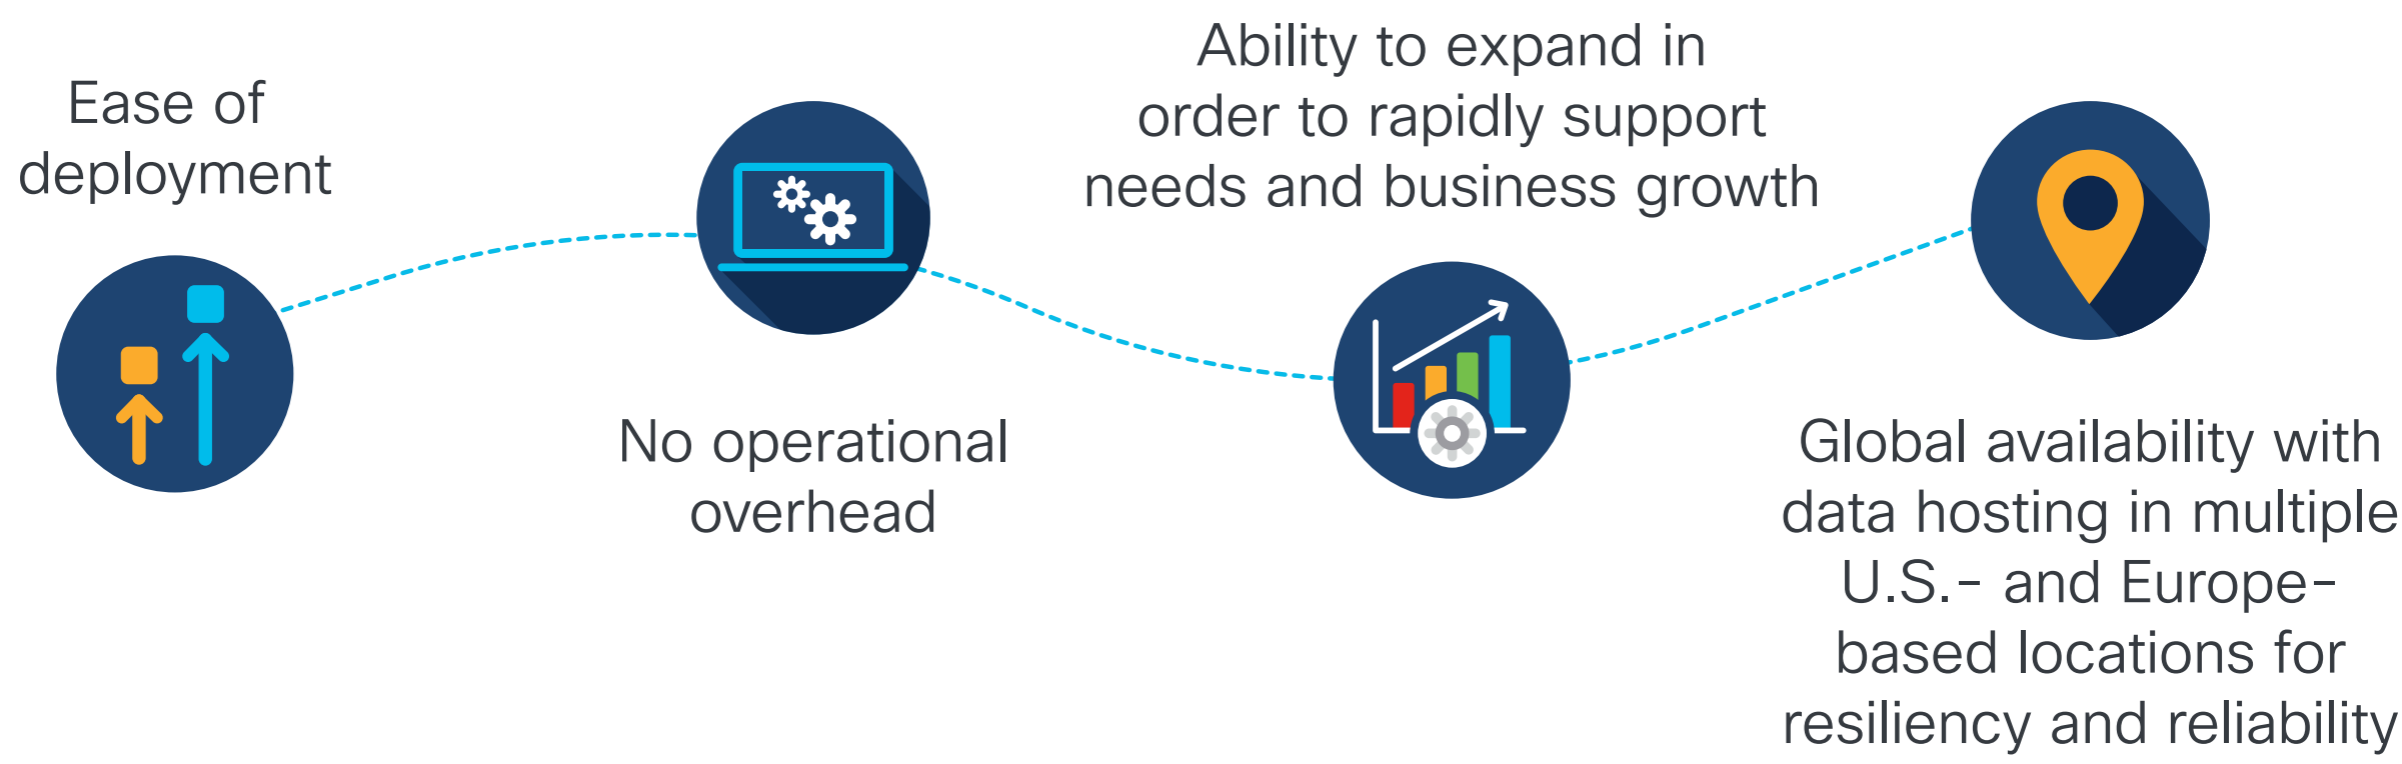

Data stored in region is critical for European customers with data residency requirements and regulations, such as organizations operating in the healthcare, financial services, and government segments.

Tetration SaaS is available globally and now supports European customers with local data privacy regulations for locally (in-region) stored data.

50% of Tetration customers deploy the software-as-a-service (SaaS) solution, realizing benefits like:

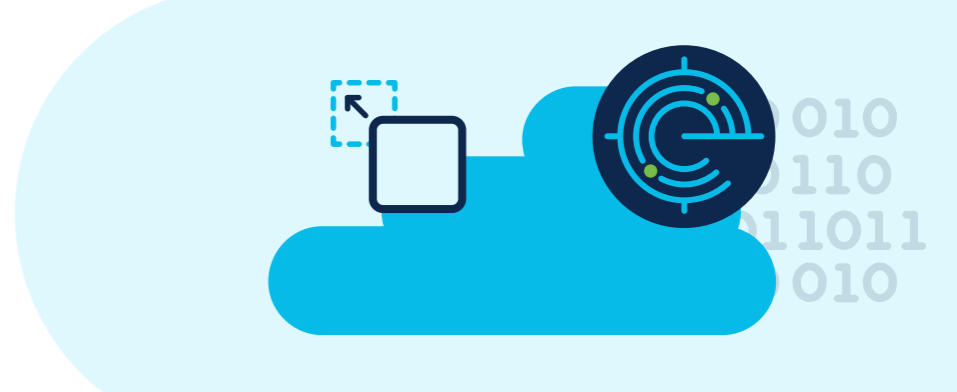

SaaS flexibility combined with Cisco Tetration’s comprehensive visibility, and automated policy discovery and enforcement is a winning combination for your business.

Europe-based organizations now comply with data privacy regulations to store data locally and can take advantage of best-in-class application workload protection.

Cisco Tetration addresses the cloud workload security challenge in a comprehensive, scalable way with holistic protection for thousands of applications, and tens of thousands of workloads, supporting:

Microsegmentation for the implementation of a zero-trust model

Application vulnerability detection (CVEs)

For more information, read the Cisco Tetration SAAS privacy datasheet.
