## OVERVIEW

Cisco HyperFlex™ Systems unlock the full potential of hyperconvergence. The systems are based on an end-to-end software-defined infrastructure, combining software-defined computing in the form of Cisco Unified Computing System (Cisco UCS) servers; software-defined storage with the powerful Cisco HX Data Platform and software-defined networking with the Cisco UCS fabric that will integrate smoothly with Cisco Application Centric Infrastructure (Cisco ACI™). Together with a single point of connectivity and hardware management, these technologies deliver a preintegrated and adaptable cluster that is ready to provide a unified pool of resources to power applications as your business needs dictate.

The Cisco HyperFlex HX240C M6 LFF extends the capabilities of Cisco's HyperFlex portfolio in a 2U form factor with the addition of the 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake), 16 DIMM slots per CPU for 3200-MHz DDR4 DIMMs with DIMM capacity points up to 128 GB. The maximum memory capacity for 2 CPUs is listed here:

- 4 TB (32 x 128 GB DDR4 DIMMs), or
- 10 TB (16 x 128 GB DDR4 DIMMs and 16 x 512 GB Intel® Optane™ Persistent Memory Modules (PMem)).

The server accommodates up to 12 front facing SAS-only LFF drives, up to 4 mid-plane SAS-only LFF drives, and up to 2 rear-facing SFF drives. The server also provides a riser slot for a SAS HBA. The chassis is equipped with six fans and two power supplies.

The HX240C M6 LFF Server Node includes a dedicated modular LAN on motherboard (mLOM) slot for installation of a Cisco Virtual Interface Card (VIC) or third-party network interface card (NIC) without consuming a PCI slot, in addition to 2 x 10 Intel x550 10Gbase-T embedded (on the motherboard) LOM ports.

HX-DCPMM-MM <sup>3</sup>	Intel Optane DC Persistent Memory Operational Mode - Memory		

**Notes:**

- Any empty DIMM slot must be populated with a DIMM blank to maintain proper cooling airflow.
- App Direct Mode:** PMem operates as a solid-state disk storage device. Data is saved and is non-volatile. Both PMem and DIMM capacities count towards the CPU capacity limit.
- Memory Mode:**
  - Please note that DCPMM - Memory mode configuration is on compliance hold review. Please contact: [hxdcpmm\\_compliancehold@cisco.com](mailto:hxdcpmm_compliancehold@cisco.com)
  - Please use the [HX M6 Memory Guide](#) to determine the correct DRAM:DCPMM ratio

**NOTE:**

- System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.
- The selected DIMMs must be all of same type and number of DIMMs must be equal for both CPUs
- HyperFlex Data Platform reserves memory for each controller VM. Refer to the [Install Guide](#) for reservation details.
- The memory mirroring feature is not supported with HyperFlex nodes.

## Memory Configurations, Features, and Modes

System speed is dependent on the CPU DIMM speed support. Refer to [Available CPUs, page 12](#) for DIMM speeds.

- The server supports the following memory reliability, availability, and serviceability (RAS) BIOS options (only one option can be chosen):
  - Adaptive Double Device Data Correction (ADDDC) (default)
  - Maximum performance
- For best performance, observe the following:
  - When one DIMM is used, it must be populated in DIMM slot 1 (farthest away from the CPU) of a given channel.
  - When single- or dual-rank DIMMs are populated in two DIMMs per channel (2DPC) configurations, always populate the higher number rank DIMM first (starting from the farthest slot). For a 2DPC example, first populate with dual-rank DIMMs in DIMM slot 1. Then populate single-rank DIMMs in DIMM 2 slot.
- DIMMs for CPU 1 and CPU 2 (when populated) must always be configured identically.
- Cisco memory from previous generation servers (DDR3 and DDR4) is not compatible with the server.
- Memory can be configured in any number of DIMMs as pairs, although for optimal performance, see the following document  
[HX M6 Memory Guide](#)

#### DIMM Rules

- Allowed DIMM count for 1 CPU:
  - Minimum DIMM count = 1; Maximum DIMM count = 16
  - 1, 2, 4, 6, 8, 12, or 16 DIMMs allowed
  - 3, 5, 7, 9, 10, 11, 13, 14, or 15 DIMMs not allowed.

#### NOTE:

- DIMM mixing is not allowed when PMem are installed; in these cases, all DIMMs must be the same type and size.
- See the detailed mixing DIMM configurations at the following link  
[HX M6 Memory Guide](#)

## STEP 5 SELECT DRIVE CONTROLLERS

The following list summarizes how drives are controlled on the server:

- SAS/SATA drives are controlled through a Cisco 12G SAS pass-through HBA
- PCIe NVMe drives are controlled directly from the CPUs

### Cisco M6 12G SAS HBA

This HBA supports up to 32 SAS or SATA drives. It supports JBOD or pass-through mode (not RAID) and plugs into slot 1 of riser 1B.

#### Select Drive Controller Options

Select the following:

- Cisco 12G M6 SAS HBA (see [Table 9](#))

**Table 9 Hardware Controller Options**

## STEP 6 SELECT DRIVES

The standard disk drive features are:

- 3.5-inch large form factor (front and mid-plane drives)
- 2.5-inch small form factor (rear drives)
- Hot-pluggable
- Drives come mounted in sleds

### Select Drives

<b>NOTE:</b> Cisco uses solid state drives (SSDs) from a number of vendors. All solid state drives (SSDs) are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives (SSDs) that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.			

---

## Approved Configurations

---

- Six to twelve capacity drives and four optional mid plane capacity drives

**NOTE:**

- A minimum of 3 capacity drives is supported for HX Edge configuration.
- For cluster scale related information please see the product [release notes](#).

- 
- One rear cache drive
  - One rear system drive
  - Boot drive:

**NOTE:**

- Order two identical M.2 SATA SSDs for the boot-optimized RAID controller. You cannot mix M.2 SATA SSD capacities.
- It is recommended that M.2 SATA SSDs be used as boot-only devices.
- The Boot-Optimized RAID controller supports VMWare, Windows and Linux Operating Systems.
- CIMC/UCSM is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives.
- The minimum version of Cisco IMC and Cisco UCS Manager that supports this controller is 4.2(1) and later. The name of the controller in the software is MSTOR-RAID
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported.
- Hot-plug replacement is not supported. The server must be powered off.
- The boot-optimized RAID controller is supported when the server is used as a compute node in HyperFlex configurations.
- See [Figure 8 on page 52](#) for the location of the module connector on the motherboard. This connector accepts the boot-optimized RAID controller.

---

## Caveats

---

- A midplane kit (PID UCSC-MPSTOM6L-KIT) is required.
- A midplane kit (PID UCSC-MPSTOM6L-KIT) is included even if midplane drives are not ordered. Note that if a double-wide GPU is selected, a midplane kit and midplane drives cannot be installed.

## STEP 7 SELECT OPTION CARD(s)

The standard PCIe card offerings are:

- Modular LAN on Motherboard (mLOM)
- Virtual Interface Cards (VICs)
- Network Interface Cards (NICs)

### Select Option Cards

The available option cards are listed in [Table 11](#).

**Table 11 Available PCIe Option Cards**

<b>HX PCIe Accel Engine<sup>3,4</sup></b>			
HX-PCIE-OFFLOAD-1	Application Acceleration Engine	Riser 2 only	HHHL, SS

**Notes:**

1. HHHL = half-height, half-length; FHHL = full-height, half-length; SS = single-slot; DS = double-slot
2. The mLOM card does not plug into any of the riser 1 or riser 2 card slots; instead, it plugs into a connector inside the chassis
3.
  - Every node in an HX cluster must use HX-PCIE-OFFLOAD-1 card
  - Optional card offloads the compression functionality to HW acceleration card. HX-PCIE-OFFLOAD-1 uses a more computationally intensive compression algorithm. This results in lower storage space and frees up CPU cycle.
  - HXDP Enterprise licenses are required.
  - HX-PCIE-OFFLOAD-1 works with all HXDP features, including Stretched Cluster, SED drives and more

4. Please note that, HX-PCIE-OFFLOAD-1 is on Compliance Hold Review, for details contact:  
[hx-order-compliance-hold@cisco.com](mailto:hx-order-compliance-hold@cisco.com)

**NOTE:** Use of 10GE PCI card is not allowed with 6300 Series FI.

---

## Caveats

---

- For 1-CPU systems:
  - One PCIe slot (slot 1) is available for a 1-CPU system. However, it is reserved for the drive controller SAS HBA only.
- For 2-CPU systems:
  - The following PCIe slots are available:
    - One on PCIe riser 1B (slots 1, reserved for drive controller),
    - Three on PCIe riser 2A (PCIe slots 4, 5, and 6), and
  - One plug-in PCIe VIC card can be installed in dual CPU systems, using slot 5. In addition, you can order an mLOM VIC card, which is installed in the mLOM slot inside the chassis and thus have two VIC cards in operation at the same time. See [Table 11 on page 24](#) for the selection of plug-in and mLOM VIC cards. See also [Table 1 on page 6](#) and [SPARE PARTS, page 58](#) for the PCIe slot physical descriptions.
  - The server supports up to one PCIe Cisco VICs plus an MLOM VIC

However, single wire management is supported on only one VIC at a time. If multiple VICs are installed on a server, only one slot has NCSI enabled at a time and for single wire management, priority goes to the MLOM slot, then slot 5 for NCSI management traffic. When multiple cards are installed, connect the single wire management cables in the priority order mentioned above.
- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the HX240c M6 LFF server, but are not sold on the Cisco price list, check the Hardware Compatibility List at this link:

2. Riser 1B does not accept GPUs

**NOTE:**

- All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM.

### Caveats

- GPUs cannot be mixed.

## STEP 10 ORDER POWER SUPPLY

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M6 HX-Series servers. Each power supply is certified for high-efficiency operation and offer multiple power output options. This allows users to “right-size” based on server configuration, which improves power efficiency, lower overall energy costs and avoid stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

<http://ucspowercalc.cisco.com>

### WARNING:

- Starting 1<sup>st</sup> January 2024, only Titanium rated PSUs are allowed to be shipped to European Union (EU), European Economic Area (EEA), United Kingdom (UK), Switzerland and other countries that adopted Lot 9 Regulation.
- DC PSUs are not impacted by Lot 9 Regulation and are EU/UK Lot 9 compliant

### Notes:

1. The 2300 W power supply uses a different power connector than the rest of the power supplies, so you must use different power cables to connect it. See [Table 17 on page 31](#) and [Table 18 on page 34](#).

**NOTE:** In a server with two power supplies, both power supplies must be identical.

## STEP 12 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

### Select a Tool-less Rail Kit

Select a tool-less rail kit (or no rail kit) from [Table 19](#).

Table 19 Tool-less Rail Kit Options

Product ID (PID)	PID Description
HX-RAIL-M6	Ball Bearing Rail Kit for C220 & C240 M6 rack servers
HX-RAIL-NONE	No rail kit option

**NOTE:** Cisco recommends a minimum quantity of 1 Rail Kit.

### Select an Optional Reversible Cable Management Arm

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use [Table 20](#) to order a cable management arm.

Table 20 Cable Management Arm

Product ID (PID)	PID Description
HX-CMA-C240M6	Reversible CMA for C240 M6 ball bearing rail kit

For more information about the tool-less rail kit and cable management arm, see the Cisco 240 M6 server Installation and Service Guide at this URL:

[https://www.cisco.com/content/en/us/td/docs/unified\\_computing/ucs/c/hw/c240m6/install/c240m6.html](https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/c/hw/c240m6/install/c240m6.html)

**NOTE:** If you plan to rackmount your HyperFlex HX240 M6 LFF server, you must order a tool-less rail kit. The same rail kits and CMAs are used for M5 and M6 servers.

## STEP 13 ORDER SECURITY DEVICES (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in [Table 21](#).

**Table 21 Security Devices**

Product ID (PID)	PID Description
HX-TPM-002C	TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified, for M6 servers
HX-INT-SW02	C220 and C240 M6 Chassis Intrusion Switch
UCSX-TPM-OPT-OUT	OPT OUT, TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified <sup>1</sup>

**Notes:**

1. Please note that Microsoft certification requires a TPM 2.0 for bare-metal or guest VM deployments. Opt-out of the TPM 2.0 voids the Microsoft certification

**NOTE:**

- The TPM module used in this system conforms to TPM 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.

## STEP 14 SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from [Table 22](#).

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

PSS options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners.

The two Partner Support Options include:

- Partner Support Service for HyperFlex
- Partner Support Service for HyperFlex Hardware Only

PSS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support.

### Drive Retention Service

With the Cisco Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available)

**NOTE:** Cisco does not offer a certified drive destruction service as part of this service.

## SUPPLEMENTAL MATERIAL

### Hyperconverged Systems

Cisco HyperFlex Systems let you unlock the full potential of hyperconvergence and adapt IT to the needs of your workloads. The systems use an end-to-end software-defined infrastructure approach, combining software-defined computing in the form of Cisco HyperFlex HX-Series nodes; software-defined storage with the powerful Cisco HX Data Platform; and software-defined networking with the Cisco UCS fabric that will integrate smoothly with Cisco Application Centric Infrastructure (Cisco ACI). Together with a single point of connectivity and management, these technologies deliver a preintegrated and adaptable cluster with a unified pool of resources that you can quickly deploy, adapt, scale, and manage to efficiently power your applications and your business.

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB 2.0 ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in [Table 36](#).

## UPGRADING or REPLACING MEMORY

**NOTE:** Before servicing any DIMM or PMEM, do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

To add or replace DIMMs or PMEMs, follow these steps:

Step 1 Open both DIMM connector latches.

Step 2 Press evenly on both ends of the DIMM until it clicks into place in its slot

Note: Ensure that the notch in the DIMM aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM, the slot, or both.

Step 3 Press the DIMM connector latches inward slightly to seat them fully.

Step 4 Populate all slots with a DIMM or DIMM blank. A slot cannot be empty.
