

Executive Corner

Security Everywhere Across the Extended Network

You want to respond faster to threats and achieve better outcomes. What you need is a tightly integrated security architecture that is as pervasive as the devices and services you are protecting. We believe that the most effective way to accomplish this is to extend security everywhere, both embedded in the intelligent network infrastructure and pervasive across the extended network – from the service provider to the enterprise network infrastructure, data center, Internet of Things, cloud, and endpoint.

Cloud Web Security Service Status Portal and Release Notes

Two new Cloud Web Security enhancements will help you stay informed about service status, planned maintenance, and software updates.

- **Service status portal:** This provides the current status of all Cloud Web Security data center locations. The portal supplements the service notifications and is not intended to replace them. [Visit the service status portal.](#)
- **New release notes:** Release notes are published to the ScanCenter portal. They provide high-level biweekly updates on software changes made to the service.

New Cloud Web Security Content Available on Cisco.com

- **Data Center Standards:** As a security-as-a-service offering, Cisco Cloud Web Security is deployed in data centers around the world. View this document for information and frequently asked questions.
- **Data Privacy White Paper:** Find out how your privacy is protected by Cloud Web Security.
- **Log Extraction Data Sheet:** Log extraction is a popular feature that allows customers to quickly and automatically extract their data for use in other applications.

New Cisco Secure Data Center Content Available

- **Cisco Security Services for the Data Center At-a-Glance:** Learn how Cisco Security Services can help you plan, build, and manage pervasive security solutions across the data center infrastructure and within and between clouds to protect your business.
- **Secure Data Center Portfolio At-a-Glance:** Get the latest best practices in data center security design. Reduce your deployment risks and optimize the security protection for your data center.
