More and more, employees wish to work on corporate laptops as well as personal mobile devices from anywhere. With the Cisco AnyConnect Secure Mobility Client (Figure 1), you can empower your employees to do this and still provide the security necessary to help ensure that your organization is safe and protected. Cisco AnyConnect is a unified security endpoint agent that delivers multiple security services to protect the enterprise. It also provides the visibility and the control you need to identify who and which devices are accessing the extended enterprise. Cisco AnyConnect wide range of security services include functions such remote access, posture enforcement, web security features, and roaming protection. Cisco AnyConnect gives your IT department all the security features necessary to provide a robust, user-friendly, and highly secure mobile experience.

Features and Benefits

The industry-leading AnyConnect Secure Mobility Client is a modular endpoint software product. It not only provides VPN access through Secure Sockets Layer (SSL) and IPsec IKEv2 but also offers enhanced security through various built-in modules. These modules provide services such as compliance through the VPN with ASA or through wired, wireless, and VPN with Cisco Identity Services Engine (ISE), web security along side Cisco Cloud Web Security, network visibility into endpoint flows within Stealthwatch, or off-network roaming protection with Cisco Umbrella. AnyConnect clients are available across a broad set of platforms, including Windows, macOS, Linux, iOS, Android, Windows Phone/Mobile, BlackBerry, and ChromeOS.
Major features are shown in Table 1.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unified Endpoint Compliance</td>
<td>The AnyConnect ISE Posture Module in Cisco ISE deployments provides unified endpoint posture checks and automated remediation across wired, wireless, and VPN environments. This module serves as the main source of endpoint posture checking for OS levels, latest antivirus/spyware/malware updates, application and hardware inventory and other endpoint checks to determine compliance state and strengthen endpoint security. For VPN only environments, the Cisco Adaptive Security Appliance provides endpoint posture using Cisco AnyConnect Hostscan Module.</td>
</tr>
<tr>
<td>Highly Secure Network Access</td>
<td>The AnyConnect Network Access Manager provides superior connectivity features. Administrators can control which networks or resources for endpoints to connect. It provides an IEEE 802.1X supplicant that can be provisioned as part of authentication, authorization, and accounting (AAA) capabilities along with some unique encryption technologies such as MACsec IEEE 802.1AE.</td>
</tr>
<tr>
<td>Web Security</td>
<td>A built-in AnyConnect module implements web security either through the on-premise Cisco Web Security Appliance or the cloud-based Cisco Cloud Web Security offering. Combining web security with VPN access, administrators can provide comprehensive, highly secure mobility to all end users, which is vital for bring-your-own-device (BYOD) deployments. Enterprises have a choice of deployments to defend the network against web malware and to control and safeguard web usage.</td>
</tr>
<tr>
<td>Network Visibility</td>
<td>The AnyConnect Network Visibility Module on Windows, macOS, Linux, and Samsung Knox-enabled devices gives administrators the ability to monitor endpoint application usage to uncover potential behavior anomalies and to make more informed network design decisions. Usage data can be shared with NetFlow analysis tools such as Cisco Stealthwatch.</td>
</tr>
<tr>
<td>Off-Network Protection (DNS-Layer Security)</td>
<td>Cisco Umbrella Roaming is a cloud-delivered security service that protects devices when they are off the corporate network. Whether users turn off the VPN or forget to turn it on, Umbrella Roaming enforces security at the DNS layer to protect against malware, phishing, and command-and-control callbacks over any port or protocol.</td>
</tr>
<tr>
<td>Mobile Device Support</td>
<td>Administrators need to support end-user productivity by providing personal mobile devices with remote access to the company network. AnyConnect services can be deployed on the most popular devices used by today’s diverse workforce. Highly secure remote access can either be device-based or through select per-application VPN, which eliminates unapproved applications from accessing confidential business resources further reducing malware intrusion risks and bandwidth costs for remote access.</td>
</tr>

Cisco AnyConnect® – Way more than VPN

AnyConnect® features
- Basic VPN
- Advanced VPN
- Endpoint Compliance
- Cloud Web Security Services (CWS + WSA)
- Threat Protection
- Network Visibility
- Roaming Protection

Integration with other Cisco solutions
- ISR
- ASR/CSR
- Adaptive Security Appliance (ASA)
- Identity Services Engine (ISE)
- Switches and Wireless Controllers
- Advanced Malware Protection
- Netflow collectors
- Umbrella Services

Next Steps
For more information, visit the following sites:
- Licensing and ordering: The [Cisco AnyConnect Ordering Guide](http://www.cisco.com/go/anyconnect) covers licensing for AnyConnect, clientless SSL VPN, and third-party Internet Key Exchange version 2 (IKEv2) remote-access VPN usage.
