Welcome to the multicloud era - SaaS apps in the cloud, public and hybrid clouds hosting infrastructure, employees and branches accessing the cloud and internet from anywhere.

84% of companies will use multiple clouds

70% of branches have direct, anytime cloud access

Lack of Visibility
Companies don't have visibility into cloud apps being used (Shadow IT) or visibility into public cloud activity. If we don't know what people are doing, how can we protect the cloud?

Compromised Accounts
If account credentials are compromised, bad actors can access public cloud data or SaaS apps used to run business – with the risk they take down entire cloud infrastructures.

Misconfigured Settings
Misconfigured cloud settings can be serious. If misconfigured, anyone – attackers included - can steal public cloud data or download sensitive documents.
