Welcome to the multicloud era - SaaS apps in the cloud, public and hybrid cloud hosting infrastructure, employee and branches accessing the cloud and internet from anywhere.

300,000 OAuth-connected SaaS apps discovered

84% of companies will use multiple clouds

70% of branches have direct, anytime cloud access

Security must be elevated to meet the threats unique to SaaS applications and the public cloud.

Lack of Visibility
Companies don’t have visibility into cloud apps being used (Shadow IT) or visibility into public cloud activity. If we don’t know what people are doing, how can we protect the cloud?

Compromised Accounts
If account credentials are compromised, bad actors can access public cloud data or SaaS apps used to run business – with the risk they take down entire cloud infrastructures.

Misconfigured Settings
Misconfigured cloud settings can be serious. If misconfigured, anyone – attackers included - can steal public cloud data or download sensitive documents.

Effective Security for the Multicloud Era

Access from Anywhere

Public Cloud Infrastructure

SaaS Apps

Security must be elevated to meet the threats unique to SaaS applications and the public cloud.

Lack of Visibility
Companies don’t have visibility into cloud apps being used (Shadow IT) or visibility into public cloud activity. If we don’t know what people are doing, how can we protect the cloud?

Compromised Accounts
If account credentials are compromised, bad actors can access public cloud data or SaaS apps used to run business – with the risk they take down entire cloud infrastructures.

Misconfigured cloud settings can be serious. If misconfigured, anyone – attackers included - can steal public cloud data or download sensitive documents.

SaaS Apps Security
Cisco Cloudlock
- Protections for on- and off-premises SaaS apps
- Cisco AMP for Endpoints
- Cisco Email Security

Public Cloud Infrastructure Security
Cisco Stealthwatch Cloud
- Trace and detect abnormal cloud behavior
- Cisco AMP for Endpoints
- Cisco Email Security

Secure Access to the Cloud
Cisco Umbrella
- Secure access to the cloud
- Cisco AMP for Endpoints
- Cisco Email Security

SaaS Cloud Security
Cisco Cloudlock
- Protections for on- and off-premises SaaS apps
- Cisco AMP for Endpoints
- Cisco Email Security

Hybrid Cloud Workload Protection
Cisco Tetration
- Holistic workload protection
- Cisco AMP for Endpoints
- Cisco Email Security

Next-Generation Firewalls for the Cloud
Cisco’s virtual Next-Generation Firewalls and VPN capabilities help safeguard traffic and workloads that expand, contract, or shift their location over time. Flexible deployment options position protection exactly when and where needed to secure users and workloads on premise and in the cloud.

Cloud Security Assessment Service
Multi-cloud assessment for security posture recommendations, and options to remediate vulnerabilities across any cloud environment.

Elevate Your Cloud Security with Cisco
