Why should I care about software upgrades?

When something is old or outdated, it can become trendy or vintage. While that may be the case for clothes, cars, and collectibles...

...we want our customers to get the most out of Cisco Email Security hardware and software. In order to do so, we regularly release software upgrades to help improve the functionality of our product, while providing customers with the newest features and the best protection.

It most certainly isn’t the case for security software. Out-of-date security software is not something you want to keep, which is why upgrading to the latest version is critical to your business’ overall safety.

We understand that you are busy. Upgrading can take time and the process can be complex. While you may be waiting for the next version release, the best time to upgrade your Email Security software and hardware is now.

You could be vulnerable to security breaches and potential attacks.
You may be out of compliance if you work in a regulated industry such as healthcare or e-commerce.
Your current software may not run optimally and, over time, can become unreliable.
You will not have integration capabilities into other Cisco Security portfolio products.
You get upgrades to enhanced email protection capabilities.
You have visibility into attacks across your Cisco Security integrated portfolio via Cisco Threat Response (CTR).
You get fixes to bugs, threats, and other challenges you experience with your Cisco Email Security.
You can continue to keep your company’s email secure.
You can continue to meet the needs of your company’s growing business.

What happens if you don’t upgrade?

You could be vulnerable to security breaches and potential attacks.
You may be out of compliance if you work in a regulated industry such as healthcare or e-commerce.
Your current software may not run optimally and, over time, can become unreliable.
You will not have integration capabilities into other Cisco Security portfolio products.

What happens if you do?

You get upgrades to enhanced email protection capabilities.
You have visibility into attacks across your Cisco Security integrated portfolio via Cisco Threat Response (CTR).
You get fixes to bugs, threats, and other challenges you experience with your Cisco Email Security.
You can continue to keep your company’s email secure.
You can continue to meet the needs of your company’s growing business.

It’s time to move forward with Cisco security.

Make something old, new again, and upgrade to the latest version, today.
