

It's time to think about firewalls in a whole new way.

Keeping your network secure is more than a full-time job. And it's just getting crazier.

More employees work remotely.

42% annual growth in business mobile traffic, 2017 to 2022¹

More data is going through the cloud.

50% of workloads outside the enterprise data center by 2021²

More devices connect to your network from everywhere.

14.6 billion Internet of Things (IoT) devices by 2022¹

Firewalling uses a different approach.

Instead of your firewall acting as a single enforcement point, firewalling spreads that enforcement across your entire network.

It's the difference between a wall that blocks your network from a ground attack and a force field that protects your entire network from all angles.

Detect and block threats faster.

- Automatically block threats with Cisco Advanced Malware Protection (AMP).
- Get deeper visibility with the Cisco Firepower Next-Generation Intrusion Prevention System (NGIPS).
- Detect, analyze, and protect with Cisco Talos threat intelligence.

Future-proof management tools.

- Use Cisco Defense Orchestrator (CDO) to maintain consistent policies.
- Automate security integrations with Cisco Threat Response (CTR).

Integrate core networking and security functions.

- Use Cisco Application Centric Infrastructure (ACI) and Identity Services Engine (ISE) to manage policies across your entire network architecture.

Let us show you what Cisco can do for you.
