Cisco Identity Services Engine Portal Builder

Product Overview

The Cisco® ISE Portal Builder is a web-based tool that helps you create dynamic and professional-looking portals for the Cisco Identity Services Engine (ISE) without the need for a web design team or outside contractors. Now you can easily add company branding and communication requirements to your intranet access portals. You can give guests hotspot access to your branded site, complete with advertisements, while providing corporate employees with a self-service bring-your-own-device (BYOD) portal. No matter what kind of portal you need, Cisco ISE makes it easy to include your branding consistently across the enterprise.

Features

Customize Your Portals with Professional Tools
Easy-to-use features simplify the design and management of your portals. Edit the text — including font size, type, and color — and make changes to an image's location and size to help ensure a perfect fit. The color selector allows you to choose from a palette and even create custom colors. Apply your designs, images, and color selections to all the portals within a project. You also have the flexibility to customize each page. Once you're done, you can save, copy, share, or delete your portals.
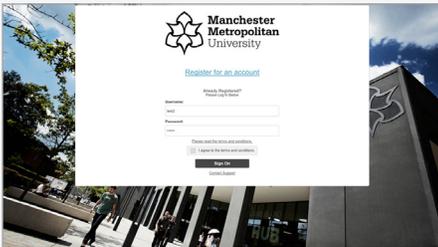

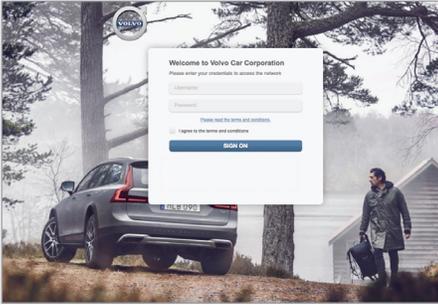

Watch Your Designs Come to Life
The "what you see is what you get" (WYSIWYG) visual editor removes guesswork from the design process. Just drag and drop objects on screen and see how the designs will look on smartphones or laptops. Despite all the advanced functionality, the portal builder keeps the workflow remarkably simple so that almost anyone can become proficient at designing and creating.

Keep Your Images in One Place for Easy Access
Easily import and save graphics, logos, banners, photos, and advertisements in the image manager. All relevant images can be easily accessed and used each time you need to make a change to your portals.

Quickly Make Modifications as Often as Required
Because virtually any IT generalist can become proficient at creating or modifying portals, anyone on your team can update the guest and BYOD portals on a frequent basis to make announcements, communicate offers, or just change the look and feel of your portals.

Benefits

- **It's easy to create a portal.** Designed for simplicity, the tool's ease of use allows nontechnical people to quickly create and export professional-looking portals.

- **Designer templates help you get started quickly.** Because creating great designs isn't easy for everyone, we offer a suite of designer templates. You can also gain design inspiration from shared custom portals from the portal builder community.

- **It's free.** The Portal Builder is available to all Cisco ISE customers at no additional cost.

Share Design Work, Collaborate as a Team

You'll be able to share your designs with team members so they can review, comment, and even provide edits. In addition, you can share your designs with the greater community and get inspired by their ideas in turn.

Eliminate Configuration Complexities, Automate Portal Uploads to Cisco ISE

How do you make sure that your configured portal stays true to your design and workflow? Configuring and exporting custom portals can be complicated, but this tool eliminates the guesswork. It includes a simple browser plug-in to streamline the configuration and exporting of your portals in Cisco ISE. It's done right the first time, every time.

Next Steps

To access the Cisco ISE Portal Builder, visit isepb.cisco.com and register using your Cisco.com identity. It's free to all Cisco ISE customers. Please review the how-to guide, demo video, and FAQ to get started.
