

United Nations

Introduction

This case study of United Nations is based on a December 2017 survey of Cisco Identity Services Engine (ISE) customers by TechValidate, a 3rd-party research service.

“Cisco ISE offers us the opportunity to see whatever connects to our network. It allows us to automatically provision user network access and authorization based on credentials. It also allowed us to create a self-provision guest portal and that took the workload of creating guest accounts anytime someone comes in from the IT ServiceDesk and also allows us to enforce network policy measures. And with ISE it is easy for us to react on any network breach because we are able to see what is happening.”

Challenges

The business challenges that led the profiled organization to evaluate and ultimately select Cisco Identity Services Engine (ISE):

- Driven to purchase Cisco ISE based on the following trends:
 - Secure Network Access
 - Cybersecurity
 - Mobility

Use Case

The key features and functionalities of Cisco Identity Services Engine (ISE) that the surveyed organization uses:

- Deployed the following ISE services:
 - User and Endpoint Visibility
 - Access Control
 - Guest Services
 - BYOD

Results

The surveyed organization achieved the following results with Cisco Identity Services Engine (ISE):

- Achieved the following outcomes from using Cisco ISE:
 - Provided actionable intelligence on the users and devices on the network
 - Minimized the impact of a breach
 - Enabled employees the flexibility to work anywhere on any device securely
 - Reduce IT staffs work load
- Reports the following networking environments gaining the most value from Cisco ISE:
 - Switching
 - Wireless
 - Security
 - Non-Cisco Network Access Devices
 - Visibility and compliance
