Complexity breeds security chaos

The world of work is changing fast. Is security keeping up?

- Average time needed to identify and contain a breach: 280 Days
- Increase in cyber intrusions in 2021: 125%
- Successful web app breaches stem from stolen credentials: 4/5

Attackers are taking note — and they’re targeting hybrid workers

Security and networking silos
Cloud vendor lock-in

IT complexity leads to security complexity.

Low visibility
High-friction user experience

On-premises
Monitor and defend everything in your data center, desktop office systems, and laptops and mobile devices at home.

In the cloud
Integrate with the platforms and software you rely on to operate your business, no matter what or where they are.

Hybrid
Protect everything, everywhere with end-to-end coverage.

Cloud-native
Meet users where they are by harnessing the power of cloud security to protect people, networks, apps and data.

4 elements of a simplified, unified security environment

- Frictionless: Make security transparent and persistent, but never in the way.
- Unified: Unified policy management, product consoles and dashboards help security work more efficiently from end to end.
- Open: Extensive APIs for broad integration and a robust developer ecosystem, so your environment can evolve along with your business challenges.

The Cisco Security Cloud
Cisco’s vision for end-to-end security across multi-cloud environments is the Cisco Security Cloud. This open, unified platform is how we plan to secure all users, networks and applications — no matter how complex your environment.

Meeting users where they are in a hybrid, multi-cloud world

The world of work is changing fast. Is security keeping up?

- 8 out of 10 organizations have a multi-cloud strategy, which can create chaos.
- Perhaps that’s why 75% of C-suite execs say their organizations are too complex to secure.
- Meanwhile, hybrid work is here to stay. More than half of employees want to be able to log in anytime, from any location, on any device. And 85% of CIOs want to make sure they can.
- But are they setting themselves up for success?

Look Familiar? Chaos is hard to hide

Secure and connect everything your business relies on
