Imagine one set of security tools to protect and connect users anywhere.

Welcome to security that’s better for users, easier for IT, and safer for everyone.

The problem with modern cybersecurity

End-to-end protection to empower users and enhance visibility

Cisco User Protection provides secure access for every user to any application, on any device, from anywhere – with zero trust principles and zero friction.

As soon as a user opens their laptop for the day, our security capabilities get to work.

Where security meets the network

We process more than 50M users protected by Secure Email.

We protect more than 220M endpoints.

We see 600B web requests per day.

We process more than 1.5B authentications per month.

End-to-end protection to empower users and enhance visibility

Empower

Visibility and control to simplify the IT experience and quickly detect and respond to threats.

Enhance

The attack surface by protecting users from attacks like phishing, malware, credential compromise, and ransomware.

Minimize

Complexity and cost with comprehensive, cloud-delivered security that can protect the most critical vectors from one consolidated solution.

Reduce

Security outcomes with accurate, rapid, and actionable threat intelligence, backed by Cisco Talos, one of the largest commercial threat intelligence teams in the world.

Improve

1.5B authentications per month

600B web requests per day

50M users protected by Secure Email

220M endpoints

What if cybersecurity could be simple, seamless, and secure?

Opens laptop, logs in once, accesses all applications, checks email, browses the internet, logs out, closes laptop.

Users work from anywhere

78% of organizations now support a mix of remote and on-site workers.

Organizations need to provide secure, seamless access to their teams, from any location, on any device, to any application.

Threats come from everywhere

74% of all breaches involved the human element, via stolen credentials, social engineering, privilege misuse or user error.

Organizations must comprehensively protect against evolving threats and defend all attack vectors targeting users.

Cybersecurity is more complex than ever

76 tools are managed by today’s security teams, on average.

Streamlining and simplifying security can reduce gaps in protection, decrease alert fatigue in IT teams, and improve productivity for everyone.

- Users with seamless access to SaaS and private applications, communication tools, and other business resources for greater productivity.
- Enhance visibility and control to simplify the IT experience and quickly detect and respond to threats.
- Empower visibility and control to simplify the IT experience and quickly detect and respond to threats.
- Minimize complexity and cost with comprehensive, cloud-delivered security that can protect the most critical vectors from one consolidated solution.
- Reduce security outcomes with accurate, rapid, and actionable threat intelligence, backed by Cisco Talos, one of the largest commercial threat intelligence teams in the world.
- Improve 1.5B authentications per month
