Cisco UCS C4200 Series Rack Server Chassis with UCS C125 M5 Rack Server Node
OVERVIEW

The Cisco UCS C4200 Series Rack Server Chassis is a modular, dense rack server chassis that supports up to four UCS C125 M5 Rack Server Nodes, optimized for use in environments requiring dense compute form factor and high core densities such as scale-out/compute intensive, general service provider, and bare-metal applications.

The Cisco UCS C4200 chassis is a modular architecture consisting of the following modules:

- **Base Chassis**: 24 SFF drive bays segmented into four groups of six direct attach drives (one group per node slot), four rear slots supporting C125 M5 server node, four redundant hot-pluggable fans, two 2400W AC high-line redundant power supplies, and a rail mounting kit.

- **Server Node**: Each C125 M5 has two sockets supporting the AMD EPYC™ 7000 Processors up to 180W TDP, 16 DIMM slots for 2666 MHz DDR4 DIMMs and capacity points up to 64GB, up to 2 half-height/half-length PCI Express (PCIe) 3.0 slots, and optional M.2/SD module. The C125 supports either SAS RAID via a PCIe 12G SAS storage controller card or SATA direct from the AMD EPYC™ CPU. The node also includes a dedicated internal LAN mezzanine slot based on the OCP 2.0 standard supporting networking speeds up to 100Gbps. Additionally, installation of a 4th generation Cisco PCIe Virtual Interface Card (VIC) can be added in the x16 PCIe 3.0 slot.

The Cisco UCS C4200 can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

<tr>
<td></td>
<td>• Dual 10 Gb BASE-T (RJ-45 connectors)</td>
</tr>
<tr>
<td></td>
<td>• Dual 10/25 Gb SFP28</td>
</tr>
<tr>
<td>Power</td>
<td>Two power supplies, redundant as 1+1:</td>
</tr>
<tr>
<td></td>
<td>■ AC power supplies 2400 W AC each</td>
</tr>
<tr>
<td></td>
<td>Do not mix power supply types or wattages in the server.</td>
</tr>
<tr>
<td>ACPI</td>
<td>The advanced configuration and power interface (ACPI) 4.0 standard is supported.</td>
</tr>
<tr>
<td>Cooling</td>
<td>Four hot-swappable fan modules for front-to-rear cooling.</td>
</tr>
<tr>
<td>PCIe I/O</td>
<td>Each removable compute node has two PCIe risers for horizontal installation of PCIe cards such as a RAID controller or Cisco Virtual Interface Card (VIC).</td>
</tr>
<tr>
<td>InfiniBand</td>
<td>The OCP and PCIe bus slots in the compute nodes support the InfiniBand architecture. Check the Cisco HCL for more information.</td>
</tr>
<tr>
<td>Storage, front-panel</td>
<td>The chassis can hold up to 24 front-loading, 2.5-inch drives.</td>
</tr>
<tr>
<td></td>
<td>Each of the four removable compute nodes can control six of the front drives.</td>
</tr>
</tbody>
</table>
## Storage, internal

Each of the four compute nodes have these internal storage options:

- Mini-storage module socket, optionally with either:
  - SD card carrier. Supports up to two SD cards
  - M.2 SSD carrier. Supports two SATA M.2 SSDs
- One micro-SD card socket.

## Storage management

Each of the four compute nodes support one RAID controller card. Each node can control six of the front-panel drives.

Up to four supercap units are supported one for the RAID controller card in each node.

The supercap units have numbered bays and numbered cable connectors in the top of the chassis, corresponding to each numbered compute node.

## RAID supercap backup

Integrated video

Integrated VGA video in each compute node. The DB-15 VGA connector is on the KVM cable that can be used with the KVM connector on each node.
CONFIGURING the SERVER

Follow these steps to configure the Cisco UCS C4200 Storage Server:

- **STEP 1** VERIFY SERVER CHASSIS SKU, page 11
- **STEP 2** SELECT SERVER NODE, page 12
- **STEP 3** SELECT CPU(s), page 13
- **STEP 4** SELECT MEMORY, page 14
- **STEP 5** SELECT RAID CONTROLLERS, page 15
- **STEP 6** SELECT HARD DISK DRIVES (HDDs) or SOLID STATE DRIVES (SSDS), page 16
- **STEP 7** SELECT PCIe OPTION CARD(s), page 19
- **STEP 8** ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES, page 22
- **STEP 10** ORDER SD CARD MODULE (OPTIONAL), page 25
- **STEP 11** ORDER MICRO-SD CARD MODULE (OPTIONAL), page 26
- **STEP 12** ORDER OPTIONAL USB 3.0 DRIVE, page 27
- **STEP 13** ORDER SECURITY DEVICES (OPTIONAL), page 28
- **STEP 14** SELECT LOCKING SECURITY BEZEL (OPTIONAL), page 29
- **STEP 15** SELECT POWER SUPPLY, page 30
- **STEP 16** SELECT POWER CORD(s), page 31
- **STEP 17** SELECT TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM, page 32
- **STEP 18** SELECT A KVM CABLE (OPTIONAL), page 33
- **STEP 19** SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE, page 34
- **STEP 20** SELECT OPERATING SYSTEM MEDIA KIT, page 36
- **STEP 21** SELECT SERVICE and SUPPORT LEVEL, page 37
- **SUPPLEMENTAL MATERIAL**, page 43
STEP 1  VERIFY SERVER CHASSIS SKU

Select the base server product ID (PID) from Table 2.

Table 2  PID of the Cisco UCS C4200 Base Server Chassis

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-C4200-SFF</td>
<td>Cisco UCS C4200 Rack Server Chassis, one rail kit, and bezel.</td>
</tr>
</tbody>
</table>

The Cisco UCS C4200 Multi-node Server:

- Does not include internal storage drives, power supplies, or compute nodes (no CPU, memory, or Storage controller).

NOTE:

- Use the steps on the following pages to configure the server with the components that you want to include.
- The C4200 will support a minimum of two up to a maximum of four C125 M5 server nodes.
**STEP 2 SELECT SERVER NODE**

**UCS C125 M5 Rack Server Node (with AMD EPYC™ 7000 CPUs)**

This server node is configurable. The base PID of the C125 M5 node is shown *Table 3*.

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-C125</td>
<td>UCS C125 M5 Rack Server Node based on AMD EPYC™ CPUs</td>
</tr>
<tr>
<td>UCSC-C125-U</td>
<td>UCS C125 M5 Rack Server Node Standalone Configurable Spare</td>
</tr>
</tbody>
</table>

**NOTE:**
- The C4200 will support a minimum of two up to a maximum of four C125 M5 server nodes.
- If any server node contains two CPU, any GPU and 16x 128GB DIMMs, then the node quantity cannot be greater than 2.
STEP 3 SELECT CPU(s)

Use the following tables to choose options for the C125 M5 rack server node. The C125 M5 supports dual and single socket configurations up to 180W TDP.

Choose two CPUs from Table 4.

Table 4 Dual Socket CPUs

<table>
<thead>
<tr>

<td>2.5 GHz 7261 155W/170W 8C/64MB Cache DDR4 2400/2666MHz</td>
</tr>
<tr>
<td>UCS-CPU-7251</td>
<td>2.0 GHz 7251 120W 8C/32MB Cache DDR4 2400MHz</td>
</tr>
</tbody>
</table>

Notes:
1. Use the following table to choose a non-upgradeable single socket only configuration for the UCS C125 M5 server node. These PIDs cannot be used with a second processor, if your customer wants to upgrade to a second processor in the future it is recommended to use one the PIDs in Table 4
2. Selecting a single socket configuration will disable NVMe drive support. A second processor is required for NVMe

Choose one CPUs from Table 5.

Table 5 Single Socket CPUs

<table>
<thead>
<tr>
<th>Product ID (PID)</th>

</tr>
<tr>
<td>UCS-MR-X16G1RW-M</td>
<td>MICRON (8Gb) 16GB 3200MHZ RDIMM</td>
</tr>
</tbody>
</table>

NOTE:

- The AMD EPYC™ 7000 CPU features a high performance 8-channel memory controller. It is recommended to always populate every DIMM slot for best system performance, however if fewer DIMMs are desired a minimum of 4 DIMMs per CPU is generally recommended.
- Unbalanced memory configurations should be avoided.
STEP 5  SELECT RAID CONTROLLERS

RAID Controller Options

Embedded SATA AHCI Controller

The default configuration is embedded SATA AHCI Controller from the Epyc CPU (CPU0) which features no RAID support and supports only SATA HDDs and enterprise value SSDs. A maximum of 6 SATA drives are supported with embedded SATA Controller. When the Embedded SATA controller is used, the PCIe riser 1 slot can be used with other PCIe add-on-cards.

- Choose a storage controller from Table 7

Table 7  RAID Controller

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-RAID-C125KIT</td>
<td>UCS C125 9460-8i RAID kit</td>
</tr>
</tbody>
</table>

CAUTION: Always shut down the node before removing it from the chassis, as described in the user manual. Failure to shut down the node before removal results in the corresponding RAID supercap cache being discarded and other data might be lost.

Table 8  Hardware Controller Options

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Controllers for Internal Drives</td>

</tr>
<tr>
<td>R2XX-RAID10</td>
<td>Factory preconfigured RAID option Enable RAID 10 Setting. Requires a minimum of four drives of the same size, speed, capacity.</td>
</tr>
</tbody>
</table>
STEP 6 SELECT HARD DISK DRIVES (HDDs) or SOLID STATE DRIVES (SSDS)

The standard disk drive features are:
- 2.5-inch small form factor
- Hot-pluggable
- Drives come mounted in sleds

Select front-facing Drives

The available drives are listed in Table 9.

</tbody>
</table>

NOTE: Cisco uses solid state drives (SSDs) from a number of vendors. All solid state drives (SSDs) are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives (SSDs) that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.

Notes:
1. For all self-encrypting drives (SED), standalone Management (CIMC) and UCSM is supported for configuring and managing local keys. SED drives can be managed with local and remote key management (third-party key management).
2. Two CPUs must be installed in order to include any number of SFF NVMe SSDs. If you choose one or two SFF NVMe drives, drive slots 1 and 2 are reserved for these drives (see Figure 9 on page 46 for drive slot numbering)

---

**NOTE:**
- To Add Individual Drives, use the HDD or SSD Tab in CCW
**STEP 7 SELECT PCIe OPTION CARD(s)**

The standard PCIe card offerings are:

- OCP LAN Module (OCP)
- PCIe Virtual Interface Cards (VICs)
- GPU

Select PCIe Option Cards

The available PCIe option cards are listed in Table 10.

Notes:
1. Refer to the Cisco HCL (Hardware Compatibility List) for additional card support including InfiniBand

**NOTE:**

- Cisco VIC 1495 supports 40/100G.
- Other optics available that support 40G.
CONFIGURING the SERVER

- Note that QSFP-40/100-SRBD supported at 100G only.
- For list of supported cables and optics with VIC 1495 refer to the [VIC 1400 series data sheet](#).
- Mixing 1300 and 1400 series VIC and MLOMs configurations is not supported.

**UCS VIC Transceiver and Cable Support Matrix**

The supported transceivers are listed in *Table 11*

<td>240 GB M.2 SATA SSD</td>
</tr>
<tr>
<td>UCS-M2-960GB</td>
<td>960 GB M.2 SATA SSD</td>
</tr>
</tbody>
</table>

**Caveats**

- Install either one or two M.2 SATA SSDs.
- You cannot mix M.2 SATA SSDs with SD cards (see ORDER SD CARD MODULE (OPTIONAL))
**STEP 10 ORDER SD CARD MODULE (OPTIONAL)**

Order SD cards. There are two locations, SD1 and SD2.

Table 14 128 GB Secure Digital (SD) Card

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>64 GB SD Card for UCS Servers</td>
</tr>
<tr>
<td>UCS-SD-32G-S</td>
<td>32 GB SD Card for UCS Servers</td>
</tr>
</tbody>
</table>

**Caveats**

- Install either one or two SD cards
- Do not mix SD card sizes
- You cannot mix SD cards with an internal M.2 SATA SSDs (see ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES).
**STEP 11 ORDER MICRO-SD CARD MODULE (OPTIONAL)**

Order one or two matching capacity M.2 SATA SSDs as desired.

Table 15  32 GB Secure Digital (SD) Card

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCS-MSD-32G</td>
<td>32GB Micro-SD Card for UCS servers</td>
</tr>
</tbody>
</table>

**Caveats**

- Install either one or two M.2 SATA SSDs.
- You cannot mix M.2 SATA SSDs with SD (see *ORDER SD CARD MODULE (OPTIONAL)*).
STEP 12 ORDER OPTIONAL USB 3.0 DRIVE

You can order one optional USB 3.0 drive.

The USB drive ordering information is listed in Table 16

See Figure 6 on page 43 for the location of the USB connector
STEP 13 ORDER SECURITY DEVICES (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server. The security device ordering information is listed in Table 18.

Choose an optional Trusted Platform Module (TPM) from Table 17.

### Table 17 TPM

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSX-TPM2-002-C</td>
<td>Trusted Platform Module 2.0 for UCS servers</td>
</tr>
</tbody>
</table>

**NOTE:**
- The TPM module used in this system conforms to TPM v1.2 and 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.
STEP 14 SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel Table 18

Table 18  C4200 Locking Security Bezel

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-BZL-C240M5</td>
<td>Locking Security Bezel for 2U C-series rack servers</td>
</tr>
</tbody>
</table>
**STEP 15 SELECT POWER SUPPLY**

The Cisco UCS C4200 accommodates two power supplies. Two power supplies are mandatory.

Use Table 19 to order the power supplies.

### Table 19  Power Supply

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-PSU3-2400W</td>
<td>UCS C4200 2400W Power Supply Unit</td>
</tr>
</tbody>
</table>
STEP 16 SELECT POWER CORD(s)

Each power supply in the server has a power cord. Standard power cords or jumper power cords are available for connection to the server. The shorter jumper power cords, for use in racks, are available as an optional alternative to the standard power cords.

Using Table 20, select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYMPWRCORD, no power cord is shipped with the server.

STEP 18 SELECT A KVM CABLE (OPTIONAL)

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB 2.0 ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in Table 23.

STEP 21 SELECT SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) onsite parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Ongoing downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

Smart Net Total Care (SNTC) for UCS

For support of the entire Unified Computing System, Cisco offers the Cisco Smart Net Total Care for UCS Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world.

For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco Smart Net Total Care for UCS Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco’s extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. For more information please refer to the following url: http://www.cisco.com/c/en/us/services/technical/smart-net-total-care.html?stickynav=1

You can choose a desired service listed in Table 26.

Smart Net Total Care for Cisco UCS Onsite Troubleshooting Service

An enhanced offer over traditional Smart Net Total Care which provides onsite-troubleshooting expertise to aid in the diagnostics and isolation of hardware issue within our customers’ Cisco Unified Computing System (UCS) environment. It is delivered by a Cisco Certified field engineer (FE) in collaboration with remote TAC engineer and Virtual Internet working Support Engineer (VISE). You can choose a desired service listed in Table 27

Solution Support for UCS

Solution Support includes both Cisco product support and solution-level support, resolving complex issues in multivendor environments, on average, 43% more quickly than product support alone. Solution Support is a critical element in data center administration, to help rapidly resolve any issue encountered, while maintaining performance, reliability, and return on investment.

This service centralizes support across your multivendor Cisco environment for both our products and solution partner products you’ve deployed in your ecosystem. Whether there is an issue with a Cisco or solution partner product, just call us. Our experts are the primary point of contact and own the case from first call to resolution. For more information please refer to the following url: http://www.cisco.com/c/en/us/services/technical/solution-support.html?stickynav=1

Partner Support Service for UCS

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

PSS options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners.

The two Partner Unified Computing Support Options include:

- Partner Support Service for UCS
- Partner Support Service for UCS Hardware Only

PSS for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support. You can choose a desired service listed in Table 30.

Unified Computing Combined Support Service

Combined Services makes it easier to purchase and manage required services under one contract. SNDC services for UCS help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco Unified Computing System (Cisco UCS), the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your UCS
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
CONFIGURING the SERVER

- Improve operational efficiency by allowing UCS experts to augment your internal staff resources
- Enhance business agility by diagnosing potential issues before they affect your operations,

You can choose a desired service listed in Table 32.

**UCS Drive Retention Service**

With the Cisco Unified Computing Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available).

**NOTE:** Cisco does not offer a certified drive destruction service as part of this service.

**Local Language Technical Support for UCS**

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) - see tables above.

SUPPLEMENTAL MATERIAL

CHASSIS

An internal view of the Cisco UCS C4200 rack server chassis with the top cover removed is shown in Figure 6.

Figure 6   Cisco UCS C4200 With Top Cover Off

1 Fan module fault LEDs on fan tray (one LED for each fan module)

- Green-Fan is OK.
- Amber-Fan has a fault or is not fully seated
Figure 7  UCS C125 M5 Block Diagram
**CPUs and DIMMs**

The following figure shows the CPU and DIMM socket placement on the C125 M5 motherboard.

- Each server node has 16 DIMM sockets total (8 for each CPU).
- DIMM sockets are organized as one DIMM per channel.

**Figure 8 C125 M5 Compute Node Internal Component Locations**
DIMM Sockets

The following figure shows the position of the DIMM sockets and how they are labeled on a C125 M5 motherboard. Each DIMM channel consist of one lettered slot (for example, CPU1 A1, B1, C1, or CPU2 A2, B2, C2, etc) for each CPU.

*Figure 9* shows the memory slot physically placement.

**Figure 9**  DIMM and CPU Numbering
Memory Population Rules

- For optimal performance, spread DIMMs evenly across both CPUs and all channels. Populate the DIMM slots of each CPU identically.
- For optimal performance, populate DIMMs in the order shown in the following table, depending on the number of DIMMs per CPU.

**NOTE:** The table below lists recommended configurations.

---

DIMM Population Rules

AMD EPYC™ processors are designed with an industry leading eight channels of DDR4 memory per processor. With more memory channels, applications will have fewer memory bottlenecks, and better performance for memory bound workloads. Though EPYC™ CPUs do not require a specific loading order for memory DIMMs, it’s advised to observe the following recommended population guidelines to obtain best performance:

- Any unused DIMM socket must have a DIMM blanking panel installed to ensure adequate airflow and cooling.
- Though a CPU can be populated with a single DIMM as a minimum configuration
  - Full memory bandwidth requires one DIMM per channel (A-H) be populated to obtain best performance with bandwidth sensitive workloads
  - At least one DIMM populated for each channel pair in the system (A,C,E,G) is minimally recommended
- Always balance the memory capacity per channel pair on a given CPU
- In a dual CPU configuration, always balance memory capacity between them as described in Table 33

Figure 10  Memory Organization

Upgrade and Servicing-Related Parts

This section lists the upgrade and servicing-related parts you may need during the life of your server. Some of these parts are configured with every server, and some may be ordered when needed or may be ordered and kept on hand as spares for future use. See Table 34.
