Cisco UCS C220 M5 Server (Large Form Factor Disk Drive Model)
OVERVIEW

The UCS C220 M5 LFF server extends the capabilities of Cisco's Unified Computing System portfolio in a 1U form factor with the addition of the 2nd Generation Intel® Xeon® Scalable Processors, 2933-MHz DDR4 memory, and the new 512GB Intel® Optane™ Persistent Memory (PMem). With this combination of features, up to 9 TB of memory is possible (12 x 256 GB DDR4 DIMMs and 12 x 512 GB PMem), two 2 PCI Express (PCIe) 3.0 slots, up to four SAS/SATA hard disk drives (HDDs) or solid state drives (SSDs), and one dedicated internal slot for a 12G SAS storage controller card.

The C220 M5 LFF server includes a dedicated internal modular LAN on motherboard (mLOM) slot for installation of a Cisco Virtual Interface Card (VIC) or third-party network interface card (NIC) without consuming a PCI slot in addition to 2 x 10 Gbase-T Intel® x550 embedded (on the motherboard) LOM ports.

The Cisco UCS C220 M5 server can be used standalone, or as part of the Cisco Unified Computing System, which unifies computing, networking, management, virtualization, and storage access into a single integrated architecture, enabling end-to-end server visibility, management, and control in both bare metal and virtualized environments.

### Table 1 Capabilities and Features (continued)

<table>
<thead>
<tr>
<th>Capability/Feature</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Expansion slots** | - Riser 1 (controlled by CPU 1):  
  - One full-height profile, 3/4-length slot with x24 connector and x16 lane.  
- Riser 2 (controlled by CPU 2):  
  - One half-height profile, half-length slot with x24 connector and x16 lane.  
- Dedicated RAID controller slot (see *Figure 5 on page 67*):  
  - An internal slot is reserved for use by the Cisco 12G SAS RAID controller or the Cisco 12G SAS HBA. |
| **Interfaces** | - Rear panel  
  - One 1Gbase-T RJ-45 management port (Marvell 88E6176)  
  - Two 10Gbase-T LOM ports (Intel® X550 controller embedded on the motherboard)  
  - One RS-232 serial port (RJ45 connector)  
  - One DB15 VGA connector  
  - Two USB 3.0 port connectors  
  - One flexible modular LAN on motherboard (mLOM) slot that can accommodate various interface cards  
- Front panel  
  - One KVM console connector (supplies two USB 2.0 connectors, one VGA DB15 video connector, and one serial port (RS232) RJ45 connector) |
| **Internal storage devices** | **Drive storage:**  
Drives are installed into front-panel drive bays that provide hot-swappable access for SAS/SATA drives. The server accommodates up to 4 x 3.5-inch SAS and SATA HDDs and SSDs and up to 2 NVMe PCIe drives  
**Other storage:**  
- One internal USB 3.0 port on the motherboard that you can use with an optional 16 GB USB thumb drive for additional storage.  
- A mini-storage module connector on the motherboard supports either:  
  - An SD card module with two SD card slots. Mixing different capacity SD cards is not supported, or  
  - An M.2 module with two SATA M.2 SSD slots. Mixing different capacity M.2 modules is not supported |

**NOTE:** SD cards and M.2 SSDs cannot be mixed. See details for RAID functionality in the 4.0(4b)ORDER M.2 SATA SSDs (OPTIONAL) section.

- One socket for a micro-SD card on PCIe Riser 1. The micro-SD card serves as a dedicated resource for utilities such as HUU. Images can be pulled from a fileshare (NFS/CIFS) and uploaded to the cards for future use.
### Table 1 Capabilities and Features  *(continued)*

<table>
<thead>
<tr>
<th>Capability/Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Integrated management processor</strong></td>
<td>Baseboard Management Controller (BMC) running Cisco Integrated Management Controller (CIMC) firmware. Depending on your CIMC settings, the CIMC can be accessed through the 1GE dedicated management port, the 1GE/10GE LOM ports, or a Cisco virtual interface card (VIC). CIMC manages certain components within the server, such as the Cisco 12G SAS HBA and the Cisco VIC</td>
</tr>
</tbody>
</table>
| **Storage controller** | - Embedded RAID (software RAID)  
  - Supports up to four SATA-only drives  
  - Requires a SATA interposer board  
- Cisco 12G SAS RAID controller card with internal SAS connectivity.  
  - Supports up to 4 internal SAS/SATA drives  
  - Plugs into a dedicated RAID controller slot  
  - Supports RAID 0, 1, 5, 6, 10, 50, 60, JBOD mode, and SRAID0  
- Cisco 12G 9400-8e SAS HBA  
  - Supports external JBOD attach  
  - Plugs into an appropriate riser slot (up to 2 supported)  
  - No RAID support |
| **Modular LAN on Motherboard (mLOM) slot** | The dedicated mLOM slot on the motherboard can flexibly accommodate the following cards:  
  - Cisco Virtual Interface Cards (VICs)  
  - Quad Port Intel® i350 1GE RJ45 Network Interface Card (NICs)  
**NOTE:** Dedicated mLOM slot that can flexibly accommodate 1-, 10-, 25-, 40-, and 100-Gbps adapters  
**NOTE:** The four Intel® i350 ports are provided on an optional card that plugs into the mLOM slot, and are separate from the two embedded (on the motherboard) LAN ports |
| **UCSM** | Unified Computing System Manager (UCSM) runs in the Fabric Interconnect and automatically discovers and provisions some of the server components. |
CONFIGURING the SERVER

Follow these steps to configure the Cisco UCS C220 M5 LFF Rack Server:

- **STEP 1** VERIFY SERVER SKU, page 10
- **STEP 2** SELECT CPU(s), page 11
- **STEP 3** SELECT MEMORY, page 16
- **STEP 4** SELECT RAID CONTROLLERS, page 23
- **STEP 5** SELECT DRIVES, page 27
- **STEP 6** SELECT PCIe OPTION CARD(s), page 30
- **STEP 7** ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES, page 34
- **STEP 8** ORDER GPU CARDS (OPTIONAL), page 39
- **STEP 9** ORDER POWER SUPPLY, page 40
- **STEP 10** SELECT POWER CORD(s), page 41
- **STEP 11** ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM, page 45
- **STEP 12** SELECT MANAGEMENT CONFIGURATION (OPTIONAL), page 46
- **STEP 13** SELECT SERVER BOOT MODE (OPTIONAL), page 47
- **STEP 14** ORDER SECURITY DEVICES (OPTIONAL), page 48
- **STEP 15** SELECT LOCKING SECURITY BEZEL (OPTIONAL), page 49
- **STEP 16** ORDER CISCO SD CARD MODULE (OPTIONAL), page 50
- **STEP 17** ORDER M.2 SATA SSDs (OPTIONAL), page 51
- **STEP 18** ORDER INTERNAL MICRO-SD CARD MODULE (OPTIONAL), page 53
- **STEP 19** ORDER OPTIONAL USB 3.0 DRIVE, page 54
- **STEP 20** SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE, page 55
- **STEP 21** SELECT OPERATING SYSTEM MEDIA KIT, page 59
- **STEP 22** SELECT SERVICE and SUPPORT LEVEL, page 60
STEP 1   VERIFY SERVER SKU

Verify the product ID (PID) of the server as shown in Table 2.

Table 2  PID of the C220 M5 LFF Rack Base Server

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-C220-M5L</td>
<td>UCS C220 M5 LFF, no CPU, memory, HDD, power supply, SD cards, PCIe cards, or tool-less rail kit</td>
</tr>
</tbody>
</table>

The Cisco C220 M5 LFF server:

- Does not include power supply, CPU, memory, hard disk drives (HDDs), SD cards, rail kit, plug-in PCIe cards or Intel® Optane™ Persistent Memory (PMem).

**NOTE:** Use the steps on the following pages to configure the server with the components that you want to include.
**STEP 2  SELECT CPU(s)**

The standard CPU features are:

- 2\textsuperscript{nd} Generation Intel\textsuperscript{®} Xeon\textsuperscript{®} scalable family CPUs
- Intel\textsuperscript{®} C621 series chipset
- Cache size of up to 38.5 MB

Select CPUs

The available CPUs are listed in Table 3.

Notes:
1. UPI = Ultra Path Interconnect. 2-socket servers support only 2 UPI performance, even if the CPU supports 3 UPI.
2. If higher or lower speed DIMMs are selected than what is shown in Table 4 on page 17 for a given CPU speed, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.
3. For details on memory support for processor classes and CPU modes, see SPARE PARTS, page 73

CAUTION: For systems configured with 2nd Gen Intel® Xeon® 205W below R-series processors, operating above 30°C [86°F], a fan fault or executing workloads with extensive use of heavy instructions sets like Intel® Advanced Vector Extensions 512 (Intel® AVX-512), may assert thermal and/or performance faults with an associated event recorded in the System Event Log (SEL).

- UCS-CPU-I6258R - Intel® 6258R 2.7GHz/205W 28C/38.50MB DDR4 2933MHz
- UCS-CPU-I6248R - Intel® 6248R 3.0GHz/205W 24C/35.75MB DDR4 2933MHz
- UCS-CPU-I6246R - Intel® 6246R 3.4GHz/205W 16C/35.75MB DDR4 2933MHz
- UCS-CPU-I6242R - Intel® 6242R 3.1GHz/205W 20C/35.75MB DDR4 2933MHz

Approved Configurations

(1) DIMM only configurations:
- Select one or two identical CPUs listed in Table 3 on page 11 or Table 4 on page 17

(2) DIMM/PMem Mixed Configurations:
- You must select two identical CPUs listed in Table 3 on page 11 or Table 4 on page 17.
Caveats

- The selection of 1 or 2 CPUs depends on the desired server functionality. See the following sections:
  - **STEP 3 SELECT MEMORY, page 16**
  - **STEP 4 SELECT RAID CONTROLLERS, page 23**
  - **STEP 5 SELECT DRIVES, page 27**
  - **STEP 6 SELECT PCIe OPTION CARD(s), page 30**

**NOTE:** See *SELECT MEMORY, page 16* for details on the compatibility of CPUs and DIMM speeds.
STEP 3 SELECT MEMORY

The available memory characteristics for the C220 M5 LFF are as follows:

- Clock speed: Up to 2933 MHz; See available CPUs and their associated DDR4 DIMM maximum clock support in Table 3.
- Rank per DIMM: 1, 2, 4, or 8
- Operational voltage: 1.2 V
- Registered ECC DDR4 DIMMs (RDIMMs), Load-reduced DIMMs (LRDIMMs), or Intel® Optane™ Persistent Memory Modules (PMem)

Memory is organized with six memory channels per CPU, with up to two DIMMs per channel, as shown in Figure 4.

Figure 4 C220 M5 LFF Memory Organization
Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in Table 4.

NOTE: When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

Notes:
1. Cisco announced the End-of-sale of the DDR4-2933 Memory DIMM products: EOL14611 lists the product part numbers affected by this announcement. M5 Memory guide addendum describes the replacement Memory DIMM product Part Numbers.
Approved Configurations

(1) 1-CPU configuration without memory mirroring:
   - Select from 1 to 12 DIMMs.

<table>
<thead>
<tr>
<th>DIMM Placement in Channels (for identically ranked DIMMs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>3</td>
</tr>
<tr>
<td>4</td>
</tr>
<tr>
<td>6</td>
</tr>
<tr>
<td>8</td>
</tr>
<tr>
<td>12</td>
</tr>
</tbody>
</table>

(2) 1-CPU configuration with memory mirroring:
   - Select 4, 6, 8, or 12 identical DIMMs. The DIMMs will be placed by the factory as shown in the following table.

<table>
<thead>
<tr>
<th>CPU 1 DIMM Placement in Channels (for identical ranked DIMMs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
</tr>
<tr>
<td>6</td>
</tr>
<tr>
<td>8</td>
</tr>
<tr>
<td>12</td>
</tr>
</tbody>
</table>

- Select the memory mirroring option (N01-MMIRROR) as shown in Table 4 on page 17.
(3) 2-CPU configuration without memory mirroring:

- Select from 1 to 12 DIMMs per CPU.

<table>
<thead>
<tr>
<th>CPU 1 DIMM Placement in Channels (for identical ranked DIMMs)</th>
<th>CPU 2 DIMM Placement in Channels (for identical ranked DIMMs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU 1</td>
<td>CPU 2</td>
</tr>
<tr>
<td>1 (A1)</td>
<td>(G1)</td>
</tr>
<tr>
<td>2 (A1, B1)</td>
<td>(G1, H1)</td>
</tr>
<tr>
<td>3 (A1, B1, C1)</td>
<td>(G1, H1, J1)</td>
</tr>
<tr>
<td>4 (A1, B1); (D1, E1)</td>
<td>(G1, H1); (K1, L1)</td>
</tr>
<tr>
<td>6 (A1, B1); (C1, D1); (E1, F1)</td>
<td>(G1, H1); (J1, K1); (L1, M1)</td>
</tr>
<tr>
<td>8 (A1, B1); (D1, E1); (A2, B2); (D2, E2)</td>
<td>(G1, H1); (K1, L1); (G2, H2); (K2, L2)</td>
</tr>
<tr>
<td>1 (A1, B1); (C1, D1); (E1, F1); (A2, B2); (C2, D2); (E2, F2)</td>
<td>(G1, H1); (J1, K1); (L1, M1); (G2, H2); (J2, K2); (L2, M2)</td>
</tr>
</tbody>
</table>

(4) 2-CPU configuration with memory mirroring:

- Select 8, 12, 16, or 24 identical DIMMs per CPU. The DIMMs will be placed by the factory as shown in the following table.

<table>
<thead>
<tr>
<th>CPU 1 DIMM Placement in Channels (for identical ranked DIMMs)</th>
<th>CPU 2 DIMM Placement in Channels (for identical ranked DIMMs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPU 1</td>
<td>CPU 2</td>
</tr>
<tr>
<td>8 (A1, B1); (D1, E1)</td>
<td>(G1, H1); (K1, L1)</td>
</tr>
<tr>
<td>12 (A1, B1, C1); (D1, E1, F1)</td>
<td>(G1, H1, J1); (K1, L1, M1)</td>
</tr>
<tr>
<td>16 (A1, A2, B1, B2); (D1, D2, E1, F1, E2)</td>
<td>(G1, G2, H1, H2); (K1, K2, L1, L2)</td>
</tr>
<tr>
<td>24 (A1, A2, B1, B2, C1, C2); (D1, D2, E1, E2, F1, F2)</td>
<td>(G1, G2, H1, H2, J1, J2); (K1, K2, L1, L2, M1, M2)</td>
</tr>
</tbody>
</table>

- Select the memory mirroring option (N01-MMIRROR) as shown in Table 4 on page 17.

**NOTE:** System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.

See Table 6 for PMem memory modes.

Table 6 Intel® Optane™ Persistent Memory Modes

<table>
<thead>
<tr>
<th>Intel® Optane™ Persistent Memory</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>App Direct Mode:</strong></td>
</tr>
<tr>
<td>PMem operates as a solid-state disk storage device. Data is saved</td>
</tr>
<tr>
<td>and is non-volatile. Both PMem and DIMM capacity counts towards</td>
</tr>
<tr>
<td>CPU tiering (both PMem and DIMM capacities count towards the CPU</td>
</tr>
<tr>
<td>capacity limit)</td>
</tr>
<tr>
<td><strong>Memory Mode:</strong></td>
</tr>
<tr>
<td>PMem operates as a 100% memory module. Data is volatile and DRAM</td>
</tr>
<tr>
<td>acts as a cache for PMem. Only PMem capacity counts towards CPU</td>
</tr>
<tr>
<td>tiering (only the PMem capacity counts towards the CPU capacity</td>
</tr>
<tr>
<td>limit). This is the factory default mode.</td>
</tr>
<tr>
<td><strong>Mix Mode:</strong></td>
</tr>
<tr>
<td>DRAM as cache. Only PMem capacity counts towards CPU tiering (only</td>
</tr>
<tr>
<td>the PMem capacity counts towards the CPU capacity limit)</td>
</tr>
</tbody>
</table>

**Notes:**
1. For Memory Mode, the Intel®-recommended DIMM to PMem capacity ratio in the same CPU channel is from 1:2 to 1:16. So if you use a 128 GB DIMM in a channel, you could use a 512 GB PMem for a 1:6 capacity ratio. If you use a 32 GB DIMM in a channel, you could use a 512 GB PMem for a 1:16 capacity ratio. There are several other combinations possible.

Table 7 2nd Generation Intel® Xeon® Scalable Processor DIMM and PMem¹ Physical Configuration

<tr>
<td>6 - 6</td>
<td>DIMM</td>
</tr>
</tbody>
</table>
Notes:

1. All systems must be fully populated with two CPUs when using PMem at this time.

**NOTE:** There are three possible memory configurations for each CPU when combining DIMMs and PMem, and the configurations must be the same for each CPU:

- 6 DIMMs and 2 PMem, or
- 6 DIMMs and 4 PMem, or
- 6 DIMMs and 6 PMem

For detailed Intel® PMem configurations, refer to

Cisco UCS C220 M5 Server Installation and Service Guide

For detailed DIMM/PMem informations, refer to

Cisco UCS C220/C240/B200 M5 Memory Guide
STEP 4  SELECT RAID CONTROLLERS

RAID Controller Options (internal HDD/SSD support)

NOTE: NVMe drives are controlled directly by CPU2 and not by any RAID controller.

Embedded Software RAID

The default RAID configuration is embedded software RAID, which supports only SATA HDDs and enterprise value SSDs (RAID 0, 1, 10). A maximum of four SATA drives are supported with embedded software RAID. Embedded RAID requires a SATA interposer board.

NOTE: The embedded software RAID is limited to Windows and Linux operating systems only. There is no VMware support for embedded software RAID.

Cisco 12G SAS RAID controller

You can choose a Cisco 12G SAS RAID controller, which plugs into a dedicated internal RAID controller card slot. This RAID controller includes a 1 GB cache and supports RAID 0, 1, 5, 6, 10, 50, 60, JBOD mode, and SRAID0.

NOTE: The number of RAID groups (virtual drives) supported per RAID controller is as follows:

- Embedded RAID = 8
- Cisco 12G SAS RAID controller = 64

SAS HBA (external JBOD support)

In addition to a RAID controller or JBOD controller for internal drives, you can choose the following SAS HBA for external JBOD drive connectivity (non-RAID):

- Cisco 9400-8e 12G SAS HBA for external JBOD attach (you can install up to two of these, one in each of the two PCIe slots in the rear panel).

RAID Volumes and Groups

When creating each RAID volume, follow these guidelines:

- Use the same capacity for each drive in each RAID volume
- For embedded software RAID:
  - Use only SATA HDDs
  - Embedded software RAID has two ports and each port can control 4 drives.
CONFIGURING the SERVER

— Each set of 4 SATA HDDs for a port must be in separate RAID volumes.
— You cannot mix drives across ports to create a RAID volume.
— For more details, see Embedded Software RAID, page 23.

■ For the Cisco 12G SAS RAID controller upgrade:
  — Use either all SAS/SATA HDDs, or all SAS SSDs, or all SATA SSDs in each RAID volume

Select Controller Options

Select one of the following RAID controllers:

■ Embedded software RAID (this is the default if no other selection is made), or
■ One Cisco 12G SAS RAID controller and a RAID configuration option listed in Table 8 on page 24.

NOTE: The default RAID solution is embedded software RAID that supports a limited number of drives, operating systems, and virtualized environments. For a more comprehensive RAID solution, choose the Cisco 12G SAS RAID controller from Table 8.

</tr>
</tbody>
</table>

**NOTE:**
- Although RAID levels 50 and 60 are not orderable from the factory, they are supported for selected controllers as shown in Table 8.
- For Cisco SAS 9400-8e 12G SAS HBA external drive enclosure support, see the enclosure section of the compatibility list at the following link: https://www.broadcom.com/support/storage/interop-compatibility
  Customers should contact their storage vendor for technical support related to external JBOD enclosures.

**Approved Configurations**

- Embedded software RAID default supports up to 4 internal SATA HDDs with RAID 0, 1, 10 support.
- The SAS RAID controller upgrade option supports up to four internal drives with RAID 0, 1, 10, 5, 6, 50, 60, and JBOD mode support.
- Up to two Cisco 12G 9400-8e SAS HBA external drive PCIe controller cards can be installed simultaneously with the SAS RAID KIT for C220M5L (UCSC-MRAID1GB-KIT).
CONFIGURING the SERVER

See Table 9 for a summary of the supported controller configuration options.

Table 9  Supported Controller Configurations for C220 M5 LFF Server

<table>
<thead>

</tr>
</tbody>
</table>

NOTE: There is no RAID support for NVMe. NVMe drives are controlled directly by CPU2. In an embedded RAID configuration, only embedded software RAID (0, 1, 10) is supported. AHCI mode is not supported.
STEP 5 SELECT DRIVES

The standard disk drive features are:

- 3.5-inch large form factor
- Hot-pluggable
- Drives come mounted in sleds

Select Drives

The available drives are listed in Table 10.

**NOTE:** Cisco uses solid state drives (SSDs) from a number of vendors. All solid state drives (SSDs) are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives (SSDs) that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.
**Notes:**

1. Operating Systems supported on 4k sector size drives is as follows:
   - Windows: Minimum release Win2012 and later
   - Linux: Minimum release RHEL 6.5 and later
   - VMware ESXi 6.5 and later is needed for 512E drive support; VMware ESXi 6.7 and later is needed for 4KN drive support
   - UEFI Mode must be used when booting from 4K sector size drives, legacy mode is not supported. Ensure that 4K sector size and 512 byte sector size drives are not mixed in the same RAID volume.

2. Two CPUs must be installed in order to include any number of SFF NVMe PCIe SSDs. If you choose one or two SFF PCIe SSD or SFF NVMe drives, drive slots 1 and 2 at the front of the chassis are reserved for these drives (see **Figure 2 on page 4** for drive slot numbering).

3. Targeted for write centric IO applications. Supports endurance of 10 or 3 DWPD (drive writes per day). Target App are caching, online transaction processing (OLTP), data warehousing, and virtual desktop infrastructure (VDI).

4. Targeted for read centric IO applications. Supports endurance of 1 DWPD (drive write per day). Target applications are boot, streaming media, and collaboration.

5. Except HGST, Intel® and Western Digital (WD) NVMe drives can be mixed anywhere in a C220 M5.

---

**NOTE:** When configuring front facing drives with spare NVMe drives, you must order an NVMe cable (PID = CBL-NVME -220FF) along with the spare drives.

---

**Caveats**

- You can choose only SATA HDDs when using embedded software RAID.
- 2.5-inch SFF NVMe drives are connected directly to the CPU, and not managed by the RAID controller.
- You can mix HDDs and SSDs as long as you keep all HDDs in their own RAID volume and all SSDs in their own RAID volume.
- You can mix SAS/SATA HDDs and SAS/SATA SSDs when using the Cisco 12G SAS RAID Controller or Cisco 12G SAS HBA.
- If you order any SFF NVMe drives, you must also order two CPUs.
- SFF NVMe drives are bootable only in standalone mode with IMC software and in UEFI mode only.
- NVMe HHHL drives are not bootable (see **Table 11 on page 30**).
- SED drives can be mixed with the non-SED drives in **Table 10 on page 27**.
STEP 6 SELECT PCIe OPTION CARD(s)

For up-to-date server compatibility, please check the Hardware and Software compatibility list (HCL) at https://ucshcltool.cloudapps.cisco.com/public/.

The standard PCIe card offerings are:

- Modular LAN on Motherboard (mLOM)
- Virtual Interface Cards (VICs)
- Network Interface Cards (NICs)
- PCIe - Accelerators/Smart NICs
- Host Bus Adapters and (HBAs)
- UCS NVMe/PCIe Add in Cards

Select PCIe Option Cards

The available PCIe option cards are listed in Table 11.

Table 11 Available PCIe Option Cards

</tr>
</tbody>
</table>
CONFIGURING the SERVER

Notes:
1. HHHL = Half Height Half Length
2. HHHL PCIe NVMe cards are not bootable.
3. Qlogic/Emulex HBAs ship with FC optics installed in the HBA.

Approved Configurations

(1) 1-CPU Systems
- You can select up to one PCIe option card (slot 1 for 1-CPU systems) listed in Table 11.

(2) 2-CPU Systems
- You can select up to two PCIe option cards (slots 1 and 2 for 2-CPU systems) listed in Table 11.

Caveats

- For 1-CPU systems:
  - Only the full-height PCIe slot on riser 1 (slot 1) is supported
  - Only a single plug-in PCIe VIC card is supported and must be installed in slot 1 (the full-height slot). However, in addition to the one PCIe VIC card, you can also choose to install an mLOM VIC card in the mLOM slot at the rear of the chassis.

- For 2-CPU systems:
  - Both PCIe slots (slots 1 and 2) are supported
  - Two plug-in PCIe VIC cards can be installed in 2-CPU systems, using slots 1 and 2. In addition, you can order an mLOM VIC card, which is installed in the mLOM slot at the rear of the chassis and thus have three VIC cards in operation at the same time. See Table 11 on page 30 for the selection of plug-in and mLOM VIC cards. See also Table 1 on page 6.

- To help ensure that your operating system is compatible with the card you have selected, or to see additional cards that have been qualified to work with the UCS C220 M5 server, but are not sold on the Cisco pricelist, check the Hardware Compatibility List at this URL: http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html

**NOTE:** Mixing 1300 and 1400 series VIC and MLOMs configurations is not supported.
## PCIe Card Configuration with 2 CPU

Below table helps in finding the right slot for the selected PCIe cards.

### Table 12  PCIe Card Configuration with 2 CPU

<table>
<thead>
<tr>
<th>PCIe Card Type</th>
<th>Primary Slot</th>
<th>Secondary Slot</th>
<th>Alternate Slot</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco 12G Modular RAID controller</td>
<td>Midplane Slot</td>

</tr>
<tr>
<td>PCIe Switch card</td>
<td>10</td>
<td>None</td>
<td></td>
</tr>
<tr>
<td>Cisco x16 VIC (Cisco VIC 1385)</td>
<td>1</td>
<td>2</td>
<td>8, 5</td>
</tr>
<tr>
<td>Nvidia and AMD GPUs</td>
<td>2</td>
<td>8</td>
<td>10, 1</td>
</tr>
<tr>
<td>Other 16x PCIe I/O card</td>
<td>8</td>
<td>10</td>
<td>2, 1</td>
</tr>
<tr>
<td>Other 8x PCIe I/O card</td>
<td>9</td>
<td>5</td>
<td>8, 2, 10, 1</td>
</tr>
<tr>
<td>Cisco x16 VIC</td>
<td>1</td>
<td>2</td>
<td>8</td>
</tr>
</tbody>
</table>

**NOTE:**
- Slot 1 only if no VIC present
- When no VIC presents in the configuration, GPU primary slot could be 1
- First VIC has the highest priority, then GPUs, then others.
- Primary Slots are first priorities
- Secondary slots are for additional card of the same type, follow the order listed
- Alternate slots can be used but may be with reduced functionality
STEP 7 ORDER OPTIONAL PCIe OPTION CARD ACCESSORIES

- These optics and cables have been tested for compatibility and are approved for use with Intel® Ethernet Network Adapter (as of the time of this publication). For the latest update, check the and consult Cisco Compatibility Matrix at https://tmgmatrix.cisco.com.

- For list of supported optics and cables for VIC1385, VIC 1387, VIC 1440, VIC 1455, VIC 1457, VIC 1495 and VIC 1497 refer to VIC 1300 and VIC 1400 series data sheet at the following links:

STEP 8 ORDER GPU CARDS (OPTIONAL)

Select GPU Options

The available GPU PCIe options are listed in Table 18

Table 18 Available PCIe GPU Cards

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
<th>Card Size</th>
<th>Maximum cards Per node</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-GPU-P4</td>
<td>NVIDIA P4</td>
<td>Low Profile Single-Width</td>
<td>2</td>
</tr>
<tr>
<td>UCSC-GPU-T4-16</td>
<td>NVIDIA T4 16GB</td>
<td>Low Profile Single-Width</td>
<td>2</td>
</tr>
</tbody>
</table>

Notes:
1. Refer to C220 M5 GPU Card Installation for more details.

NOTE:
- All GPU cards must be procured from Cisco as there is a unique SBIOS ID required by CIMC and UCSM

Caveats

- GPUs cannot be mixed.
- A GPU can be installed in either PCIe slot 1 or 2; however, for 1-CPU systems, only slot 1 is available. In 2-CPU systems, matching GPUs can be installed in both slots. For the additional information related to GPU card slots, refer to PCIe Card Configuration with 2 CPU, page 33.
- The NVIDIA P4 GPU is not supported with 2nd Generation Intel® Xeon® Processors.
**STEP 9 ORDER POWER SUPPLY**

Power supplies share a common electrical and physical design that allows for hot-plug and tool-less installation into M5 C-series servers. Each power supply is certified for high-efficiency operation and offers multiple power output options. This allows users to “right-size” based on server configuration, which improves power efficiency, lowers overall energy costs and avoids stranded capacity in the data center. Use the power calculator at the following link to determine the needed power based on the options chosen (CPUs, drives, memory, and so on):

http://ucspowercalc.cisco.com

<table>
<thead>
<tr>

<td>UCSC-PSU1-1050ELV</td>
<td>1050W AC Power Supply for Rack Server Low Line</td>
</tr>
</tbody>
</table>

**NOTE:** In a server with two power supplies, both power supplies must be identical.
STEP 10 SELECT POWER CORD(s)

Using Table 20, select the appropriate AC power cords. You can select a minimum of no power cords and a maximum of two. If you select the option R2XX-DMYMPWRCORD, no power cord is shipped with the server.

Table 20 Available Power Cords

</tr>
<tr>
<td>CAB-C13-C14-3M-IN</td>
<td>Power Cord Jumper, C13-C14 Connectors, 3 Meter Length, India</td>
<td>Image Not available</td>
</tr>
</tbody>
</table>
Notes:
1. This power cord is rated to 125V and only supported for PSU rated at 1050W or less.
STEP 11 ORDER TOOL-LESS RAIL KIT AND OPTIONAL REVERSIBLE CABLE MANAGEMENT ARM

Select a Tool-less Rail Kit

Select a tool-less rail kit from Table 21.

Table 21 Tool-less Rail Kit Options

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-RAILF-M4</td>
<td>Friction Rail Kit for C220 M4 and M5 Servers</td>
</tr>
<tr>
<td>UCSC-RAILB-M4</td>
<td>Ball Bearing Rail Kit for C220 and C240 M4/M5 Rack Servers</td>
</tr>
</tbody>
</table>

Select an Optional Reversible Cable Management Arm

The reversible cable management arm mounts on either the right or left slide rails at the rear of the server and is used for cable management. Use Table 22 to order a cable management arm.

Table 22 Cable Management Arm

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-CMAF-M4</td>
<td>Reversible CMA for C220 M4 and M5 rack servers</td>
</tr>
</tbody>
</table>

For more information about the tool-less rail kit and cable management arm, see the Cisco UCS C220 M5 Installation and Service Guide at this URL:

**NOTE:** If you plan to rackmount your UCS C220 M5 server, you must order a tool-less rail kit. The same rail kits and CMAs are used for C220 M4 and C220 M5 servers.
STEP 12 SELECT MANAGEMENT CONFIGURATION (OPTIONAL)

By default, the C220 M5 server NIC mode is configured to be Shared LOM Extended. This NIC mode allows any LOM port or adapter card port to be used to access the Cisco Integrated Management Controller (CIMC). The Cisco VIC card must be installed in a slot with NCSI support.

To change the default NIC mode to Dedicated, select the UCSC-DLOM-01 PID shown in Table 23. In Dedicated NIC mode, the CIMC can be accessed only through the dedicated management port. See Chassis Rear View, page 5 for the location of the management port.

To change the default NIC mode to Cisco Card Mode, select the UCSC-CCARD-01 PID shown in Table 23. In this mode, you can assign an IP address to the CIMC using DHCP and from there you can fully automate your deployment.

For more details on all the NIC mode settings, see https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C480M5/install/C480M5/C480M5_chapter_010.html#concept_rqj_vsr_fz

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-DLOM-01</td>
<td>Dedicated Mode BIOS setting for C-Series Servers</td>
</tr>
<tr>
<td>UCSC-CCARD-01</td>
<td>Cisco Card Mode BIOS setting for C-Series Servers</td>
</tr>
</tbody>
</table>
STEP 13 SELECT SERVER BOOT MODE (OPTIONAL)

By default, the C220 M5 server ships with UEFI as the default boot mode. To have a server shipped with the Legacy BIOS mode (which was standard on M4 and previous generation servers), select the Legacy BIOS PID from Table 24.

Table 24  Server Boot Mode Ordering Information

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-LBIOS-01</td>
<td>Legacy Boot Mode BIOS setting for C-Series Servers</td>
</tr>
</tbody>
</table>
STEP 14 ORDER SECURITY DEVICES (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

A chassis intrusion switch gives a notification of any unauthorized mechanical access into the server.

The security device ordering information is listed in Table 25.

Table 25 Security Devices

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSX-TPM2-001</td>
<td>Trusted Platform Module 1.2 SPI-based for UCS Servers</td>
</tr>
<tr>
<td>UCSX-TPM2-002</td>
<td>Trusted Platform Module 2.0 for UCS servers</td>
</tr>
<tr>
<td>UCSX-TPM2-002B</td>
<td>Trusted Platform Module 2.0 M5 UCS Servers (FIPS 140-2 Compliant)</td>
</tr>
<tr>
<td>UCSC-INT-SW01</td>
<td>C220 M5 and C240 M5 Chassis Intrusion Switch</td>
</tr>
</tbody>
</table>

NOTE:
- The TPM module used in this system conforms to TPM v1.2 and 2.0, as defined by the Trusted Computing Group (TCG). It is also SPI-based.
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM.
STEP 15  SELECT LOCKING SECURITY BEZEL (OPTIONAL)

An optional locking bezel can be mounted to the front of the chassis to prevent unauthorized access to the drives.

Select the locking bezel from Table 26.

Table 26  Locking Bezel Option

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCSC-BZL-C220M5</td>
<td>C220 M5 Security Bezel</td>
</tr>
</tbody>
</table>
STEP 16 ORDER CISCO SD CARD MODULE (OPTIONAL)

Order one or two matching SD cards. See Figure 5 on page 67 for the location of the mini storage module connector, which accommodates an SD module. Each SD module accommodates two SD cards.

Table 27 Secure Digital (SD) Card (blank)

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCS-SD-128G</td>
<td>128 GB SD Card for UCS Servers</td>
</tr>
<tr>
<td>UCS-SD-64G-S</td>
<td>64 GB SD Card for UCS Servers</td>
</tr>
<tr>
<td>UCS-SD-32G-S</td>
<td>32 GB SD Card for UCS Servers</td>
</tr>
</tbody>
</table>

NOTE: Starting from vSphere 8.0, SD cards/USB media as a standalone boot device will not be supported by VMware. For more information please refer to the VMware KB article: https://kb.vmware.com/s/article/85685

Caveats

- Install either one or two SD cards
- Do not mix SD card sizes
- You cannot mix SD cards with an internal M.2 SATA SSD (see 4.0(4b) ORDER M.2 SATA SSDs (OPTIONAL), page 51).
STEP 17  4.0(4b) ORDER M.2 SATA SSDs (OPTIONAL)

Order one or two matching M.2 SATA SSDs (see Table 28) along with a mini storage carrier or a boot-optimized RAID controller (see Table 29).

NOTE: It is recommended that M.2 SATA SSDs be used as boot-only devices.

Each mini storage carrier or boot-optimized RAID controller can accommodate up to two SATA M.2 SSDs shown in Table 28.

Table 28  M.2 SATA SSDs

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCS-M2-240GB</td>
<td>240 GB M.2 SATA SSD</td>
</tr>
<tr>
<td>UCS-M2-960GB</td>
<td>960 GB M.2 SATA SSD</td>
</tr>
</tbody>
</table>

Table 29  Mini Storage Carrier/Boot-Optimized RAID Controller

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UCS-MSTOR-M2</td>
<td>Mini Storage Carrier for M.2 SATA (holds up to 2 M.2 SATA SSDs)</td>
</tr>
<tr>
<td>UCS-M2-HWRAID</td>
<td>Cisco Boot optimized M.2 RAID controller (holds up to 2 M.2 SATA SSDs)</td>
</tr>
</tbody>
</table>

NOTE:
- The UCS-M2-HWRAID boot-optimized RAID controller supports RAID 1 and JBOD mode.
- The UCS-M2-HWRAID controller is available only with 240 GB and 960 GB M.2 SSDs.
- (CIMC/UCSM) is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives.
- The minimum version of Cisco IMC and Cisco UCS Manager that support this controller is 4.0(4b) and later. The name of the controller in the software is MSTOR-RAID.
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported.
- Hot-plug replacement is not supported. The server must be powered off.
- The boot-optimized RAID controller is not supported when the server is used as a compute node in HyperFlex configurations.

Order either the Mini Storage carrier or the Boot-Optimized RAID controller from Table 29.
- Choose the UCS-MSTOR-M2 mini storage carrier for controlling the M.2 SATA drives with no RAID control.
- Choose the UCS-M2-HWRAID Boot-Optimized RAID controller for hardware RAID across the two internal SATA M.2 drives. The Boot-Optimized RAID controller holds up to 2 matching M.2 SATA drives.
Order up to two matching M.2 SATA SSDs from Table 28.

**NOTE:** The Boot-Optimized RAID controller supports VMware, Windows and Linux Operating Systems.

Caveats

- You cannot mix M.2 SATA SSDs with SD cards.
- Order either one or two identical M.2 SATA SSDs for the mini-storage carrier or boot-optimized RAID controller. You cannot mix M.2 SATA SSD capacities.
- When ordering two M.2 SATA drives with embedded software RAID, the maximum number of internal SATA drives supported is six. To support greater than six internal drives, a Cisco 12G Raid Controller or a Cisco 12G SAS HBA must be ordered.
**STEP 18 ORDER INTERNAL MICRO-SD CARD MODULE (OPTIONAL)**

Order a 32 GB micro-SD card. The micro-SD card serves as a dedicated local resource for utilities such as a Host Upgrade Utility (HUU). Images can be pulled from a file share (NFS/CIFS) and uploaded to the card for future use.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td><strong>Product ID (PID)</strong></td>
</tr>
<tr>
<td>UCS-MSD-32G</td>
</tr>
</tbody>
</table>

**Caveats**

- The micro-SD card mounts internally on riser 1.
- The Flexutil user partition does not support OS installation. The user partition must be used for storage only.
**STEP 19 ORDER OPTIONAL USB 3.0 DRIVE**

You can order one optional USB 3.0 drive. The USB drive ordering information is listed in *Table 31.*

Table 31  USB 3.0 Drive

<table>
<thead>
<tr>
<th>Product ID (PID)</th>
<th>PID Description</th>
</tr>

</tr>
</tbody>
</table>

See *Figure 5 on page 67* for the location of the USB connector.
STEP 20 SELECT OPERATING SYSTEM AND VALUE-ADDED SOFTWARE

For more details on supported operating systems and software for this server, see the Hardware and Software Compatibility List (HCL).

Note: PIDs tagged with an asterisk (*) are Resell of an OEM Vendor’s Support. They are required to be added to the associated Product License PID.

Select

- Cisco Software (Table 32)
- OEM Software (Table 33)
- Operating System (Table 34)

Table 32 Cisco Software

STEP 22  SELECT SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

Smart Net Total Care (SNTC) for UCS

For support of the entire Unified Computing System, Cisco offers the Cisco Smart Net Total Care for UCS Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world.

For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco Smart Net Total Care for UCS Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco’s extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. For more information please refer to the following url: http://www.cisco.com/c/en/us/services/technical/smart-net-total-care.html?stickynav=1

You can choose a desired service listed in Table 36.

### Smart Net Total Care for Cisco UCS Onsite Troubleshooting Service

An enhanced offer over traditional Smart Net Total Care which provides onsite-troubleshooting expertise to aid in the diagnostics and isolation of hardware issue within our customers’ Cisco Unified Computing System (UCS) environment. It is delivered by a Cisco Certified field engineer (FE) in collaboration with remote TAC engineer and Virtual Internet-working Support Engineer (VISE).

You can choose a desired service listed in Table 37

Solution Support for UCS

Solution Support includes both Cisco product support and solution-level support, resolving complex issues in multivendor environments, on average, 43% more quickly than product support alone. Solution Support is a critical element in data center administration, to help rapidly resolve any issue encountered, while maintaining performance, reliability, and return on investment.

This service centralizes support across your multivendor Cisco environment for both our products and solution partner products you’ve deployed in your ecosystem. Whether there is an issue with a Cisco or solution partner product, just call us. Our experts are the primary point of contact and own the case from first call to resolution. For more information please refer to the following url:
You can choose a desired service listed in Table 38

Smart Net Total Care for UCS Hardware Only Service

For faster parts replacement than is provided with the standard Cisco Unified Computing System warranty, Cisco offers the Cisco Smart Net Total Care for UCS Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. Smart Net Total Care for UCS Hardware Only Service provides remote access any time to Cisco
support professionals who can determine if a return materials authorization (RMA) is required. You can choose a desired service listed in *Table 39*

**Partner Support Service for UCS**

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco’s support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

PSS options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco Intel®lectual assets. This helps partners to realize higher margins and expand their practice.

**PSS is available to all Cisco PSS partners.**

The two Partner Unified Computing Support Options include:

- Partner Support Service for UCS
- Partner Support Service for UCS Hardware Only
PSS for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support. You can choose a desired service listed in Table 40.

*Includes Drive Retention (see UCS Drive Retention Service, page 65)
Unified Computing Combined Support Service

Combined Services makes it easier to purchase and manage required services under one contract. SNTC services for UCS help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco Unified Computing System (Cisco UCS), the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your UCS
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
- Improve operational efficiency by allowing UCS experts to augment your internal staff resources
- Enhance business agility by diagnosing potential issues before they affect your operations,

You can choose a desired service listed in Table 42

UCS Drive Retention Service

With the Cisco Unified Computing Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.
Configuring the Server

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available).

NOTE: Cisco does not offer a certified drive destruction service as part of this service.

Local Language Technical Support for UCS

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) - see tables above.

For a complete listing of available services for Cisco Unified Computing System, see the following URL:

Block Diagram

A simplified block diagram of the C220 M5 server is shown in Figure 6.

Figure 6  C220 M5 LFF Block Diagram (simplified)
RAID Option ROM (OPROM) Settings

The server contains an Option ROM (OPROM) for the PCIe slots. The server has a finite amount of option ROM with which it can boot up devices. Go into the BIOS and disable the OPROM on the PCIe slots not used for booting so that resources are available for the slots that are used for booting. An example OPROM BIOS screen is shown in Figure 7.

Figure 7   Example BIOS Screen for OPROM
Serial Port Details

The pinout details of the rear RJ-45 serial port connector are shown in Figure 8.

Figure 8   Serial Port (Female RJ-45 Connector) Pinout

Serial Port (RJ-45 Female Connector)
KVM Cable

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The KVM cable ordering information is listed in Table 43.

**Notes:**
1. This part is included with the purchase of option or spare CPU or CPU processor kits.

Memory Support for CPU Classes and CPU Modes

For 2\textsuperscript{nd} Generation Intel\textsuperscript{®} Xeon\textsuperscript{®} Scalable Processors:

- DIMMs and PMem are supported
- CPU PIDs ending in “M” support up to a limit of 2048 GB per CPU
- CPU PIDs ending in “L” support up to a limit of 4608 GB per CPU
- All other CPU PIDs support up to a limit of 1024 GB per CPU
- For the App Direct Mode, both PMem and DIMM capacities count towards the CPU capacity limit
- For the Memory Mode and Mixed Mode only the PMem capacity counts towards the CPU capacity limit

For Configurations Using Only DIMMs

- CPU PIDs ending in “M” support DIMM capacities up to 1536 GB per CPU (using 12 x 128 GB DIMMs) and DIMM capacities up to 2048 GB per CPU (using 8 x 256 GB DIMMs).
- CPU PIDs ending in “L” support DIMM capacities up to 1536 GB per CPU (using 12 x 128 GB DIMMs) and DIMM capacities up to 3072 GB per CPU (using 12 x 256 GB DIMMs). The 4608 GB limit cannot be reached with these capacity DIMMs.
- CPU PIDs not ending in “L” or “M” support DIMM capacities up to 1024 GB per CPU (using 8 x 128 GB DIMMs or 4 x 256 GB DIMMs).

For Configurations Using DIMMs and PMem in App Direct Mode

- CPU PIDs ending in “M” support capacities up to 1792 GB per CPU (using 6 x 128 GB DIMMs and 2 x 512 GB PMem or 4 x 256 GB PMem) or up to 2048 GB per CPU (using 6 x 256 GB DIMMs and 2 x 256 GB PMem or 6 x 256 GB DIMMs and 4 x 128 GB PMem).
- CPU PIDs ending in “L” support capacities up to 3840 GB per CPU (using 6 x 128 GB DIMMs and 6 x 512 GB PMem) or up to 4608 GB per CPU (using 6 x 256 GB DIMMs and 6 x 512 GB PMem).
- CPU PIDs not ending in “L” or “M” support capacities up to 1024 GB per CPU (using 6 x 128 GB DIMMs and 2 x 128 GB PMem).

For Configurations Using DIMMs and PMem in Memory or Mixed Mode

- CPU PIDs ending in “M” support capacities up to 2048 GB per CPU using:
  - 6 x 128 GB DIMMs as cache and 4 x 512 GB PMem as memory, or
  - 6x 256 GB DIMMs as cache and 4 x 512 GB PMem as memory
- CPU PIDs ending in “L” support capacities up to 3072 GB using:
  - 6 x 128 GB DIMMs as cache and 6 x 512 GB PMem as memory, or

\textit{NOTE:} For Memory and Mixed Modes, DIMMs are used as cache and do not factor into CPU capacity.
— 6 x 256 GB DIMMs as cache and 6 x 512 GB PMem as memory

The allowable 4608 limit for PMem capacity is not reached in this case.

■ CPU PIDs not ending in “L” or “M” support capacities up to 1024 GB per CPU using:
  — 6 x 128 GB DIMMs as cache and 2 x 512 GB PMem as memory, or
  — 6 x 256 GB DIMMs as cache and 2 x 512 GB PMem as memory

For Intel® Xeon® Scalable Processors:

■ DIMMs are supported; PMem are not supported
■ CPU PIDs ending in “M” support DIMM capacities up to 1536 GB per CPU (using 12 x 128 GB DIMMs).

All other CPU PIDs support DIMM capacities up to 768 GB per CPU (using 6 x 128 GB DIMMs or 12 x 64 GB DIMMs)
NOTE: Before servicing any CPU, do the following:
- Decommission and power off the server.
- Slide the C220 M5 LFF server out from the rack.
- Remove the top cover.

To replace an existing CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:
- T-30 Torx driver—Supplied with replacement CPU.
- #1 flat-head screwdriver—Supplied with replacement CPU.
- CPU assembly tool—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPUAT=.
- Heatsink cleaning kit—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCSX-HSCK=.
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=.

(2) Order the appropriate replacement CPU from Table 3 on page 11.

(3) Carefully remove and replace the CPU and heatsink in accordance with the instructions found in “Cisco UCS C220 M5 Server Installation and Service Guide,” found at: https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/c/hw/C220M5/install/C220M5/C220M5_chapter_010.html#concept_bfk_kwp_hz.

To add a new CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:
- T-30 Torx driver—Supplied with new CPU.
- #1 flat-head screwdriver—Supplied with new CPU.
- CPU assembly tool—Supplied with new CPU. Can be ordered separately as Cisco PID UCS-CPUAT=.
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=.

(2) Order the appropriate new CPU from Table 3 on page 11.

(3) Order one heat sink for each new CPU. Order PID UCSC-HS-C220M5= for CPUs that dissipate 150 W or less. Order PID UCSC-HS2-C220M5= for CPUs that dissipate more than 150 W.

**UPGRADING or REPLACING MEMORY**

NOTE: Before servicing any DIMM or PMem, do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

To add or replace DIMMs or PMem, follow these steps:

(1) Order new DIMMs or PMem as needed from *Table 4 on page 17*.

(2) Open both connector latches and remove and replace the DIMM/PMem as needed.

**Figure 10  Replacing Memory**
(3) Press evenly on both ends of the DIMM/PMem until it clicks into place in its slot.

**NOTE:** Ensure that the notch in the DIMM/PMem aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM/PMem, the slot, or both.

(4) Press the connector latches inward slightly to seat them fully.

For additional details on replacing or upgrading DIMMs and PMem, see “Cisco UCS C220 M5 Server Installation and Service Guide,” found at these links:

# DISCONTINUED EOL PRODUCTS

Below is the list of parts that were previously available for this product and are no longer sold. Please refer to the EOL Bulletin Links via the Table 45 below to determine if still supported.

NEBS Compliance

When configured with choices from the specific set of components shown in Table 46, the UCS C220 M5 server meets Network Equipment Building Standards (NEBS) Level 1 and Level 3 compliance. For specific configuration rules, see the applicable sections of this document.

**Power Specifications**

The server is available with the following types of power supplies:

- 770 W (AC) power supply (see Table 48).
- 1050 W (AC) power supply (see Table 49).
- 1050 W V2 (DC) power supply (see Table 50)
- 1600 W (AC) power supply (see Table 51)

**Notes:**

1. This is the minimum rating required to achieve 80 PLUS Platinum certification, see test reports published at [http://www.80plus.org/](http://www.80plus.org/) for certified values.

2. Time output voltage remains within regulation limits at 100% load, during input voltage dropout.
