Cisco public

Solutions for a new era of intent-based networking.

The world is fast changing. Your network needs to keep up with it - the demand of fast advancing security threats, evolving IoT, Cloud and mobility integration.

Cisco® networks have moved data for 80 percent of the Internet for the last three decades. And we don’t just move data. We study it. We work continually to understand it. We apply that knowledge when we design our next generation switches.

And there is more data coming. Every year more devices connect to your wireless network and more data is transmitted and that means that the demand for a network to be fast and secure never waivers.

The result: a network that constantly learns, constantly adapts, constantly protects powered by the Cisco Catalyst® 9000 portfolio.

Benefits

- Twice the density at a lower cost. New features packed with Cisco IOS XE Software.
- End to end integrated security solution. Detect and stop threats, even with encrypted traffic.
- Simplified automation and assurance: goal-based policies are created once centrally, applied network-wide.
- Accelerate changes with programmability, supporting open standards and APIs.
The mobility challenge
One network, one OS, wired and wireless. The convergence is seamless with the Cisco Catalyst 9000 portfolio. Policies are applied consistently for security, automation, and assurance, while segmentation separates devices and users to help reduce the attack surface. This delivers the best mobility experience for employees and guests. Plus support the industry’s highest density Wi-Fi 6 (802.11ax) deployments with Cisco Multigigabit Technology.

The IoT challenge
The scale of IoT is expected to be three times the global population by 2021. Easy segmentation of your network through network virtualization will be the key to automate and secure the onboarding and access of IoT devices.

The Catalyst 9000 family also can literally power and manage your Digital Building. From the highest perpetual PoE/PoE+/UPOE density in the industry, to support for multicast, Audio Visual Bridging (AVB), Time Synch (IEEE 1588), and Cisco DNA Service for Bonjour service discovery.

The multicloud challenge
Connecting to multiple cloud services exposes more challenges and threats than we have in the local networks. With Catalyst 9000 you can simplify, secure, and transform your network to include a cloud or hybrid cloud environment.

Provisioning, automation, and monitoring can be done with off the shelf applications or can be locally hosted on the switch in a container-based hosting environment.

Top three reasons to upgrade to Catalyst 9000 family
Secure
With access to Cisco’s best in class security portfolio anchored by Talos, Encrypted Traffic Analytics, Trustworthy Solutions, MACsec encryption and segmentation, the product family provides advanced security features that protects the integrity of the hardware as well as the software and all data that flows through the switch and the network.

Always on
The Catalyst 9000 family provides enterprise-level resiliency to keep your business up and running seamlessly. Options like FRU power supplies and fans, modular uplinks, modular patching, perpetual PoE, and the industry’s highest MTBF.

Catalyst 9800 wireless controllers can be deployed as redundant or cloud-based options for additional wireless control redundancy.

IT Simplicity
Combine the application visibility of full flexible NetFlow with telemetry and the open APIs of Cisco IOS XE and on switches, the UADP ASIC programmability, and Catalyst 9000 portfolio gives you the best experience provisioning and managing your network now with investment protection on future innovations.
Cisco Catalyst 9100 access points are adaptive, fast, intelligent and secure. Not only do they adhere to the Wi-Fi 6 (802.11ax) standard but they go beyond. These access points allow for more flexibility and scalability needed to handle the extra devices connected to the network and the data that they will generate.

The Catalyst 9100 APs deliver:
- Three to four times the performance than 802.11 ac.
- Reliable performance—always connected, always dependable—even in challenging environments.
- Up to 50% reduced latency to provide better performance for applications that use high voice and video.
- Increased density and connect more devices (especially IoT) at higher throughputs.

Cisco Catalyst 9200 Series switches are designed for simple branch/midmarket fixed enterprise access deployments.

With its family pedigree, Catalyst 9200 Series offers simplicity without compromise – it is secure, always on and provides a new level in IT simplicity.

- Delivers 160 Gbps stacking bandwidth.
- Flexible uplinks: 1 Gbps, 10 Gbps fixed and modular options.
- Downlinks: 1 Gbps copper, perpetual PoE+ options.
- Supports cold patching, and FRU redundant platinum-rated power supplies and fans options.

Cisco Catalyst 9300 Series switches are our leading fixed enterprise access switching platform.

Ideal access switch for business critical branch and campus environments where scale and an extra degree of security, resiliency and programmability is needed.

- Delivers 480 Gbps stacking bandwidth capacity.
- Flexible uplinks: Cisco Multigigabit, 1 Gbps, 10 Gbps, 25 Gbps, and 40 Gbps.
- Flexible downlinks: multigigabit, 5 Gbps, 2.5 Gbps, or 1 Gbps copper, or 1 Gbps fiber. Perpetual Cisco UPOE and PoE+ options.
- Supports ETA, AVB, hot patching, NFS/SSO, redundant power, fans and perpetual PoE+.
Cisco Catalyst 9400 Series switches are our leading modular enterprise access/aggregation switching platform. Ideal for business critical Enterprise campus access and distribution.

- Delivers up to 480 Gbps/slot, 9 Tbps/chassis.
- Flexible uplinks: 1, 10, 25, and 40 Gbps.
- Flexible downlinks: Multigigabit, 1 Gbps copper, 1 Gbps SFP, 10 Gbps, SFP+, Cisco UPOE+, Cisco UPOE and PoE+.
- Supports ETA, AVB, StackWise® virtual for core/aggregation placement, ISSU, NSF/SSO, hot patching, uplink resiliency, N+1/ perpetual PoE.

Cisco Catalyst 9500 Series switches are our leading fixed core/aggregation enterprise switching platform. Industry leading 100G/40G density in a 1RU form factor.

- Delivers up to 6.4 Tbps per 1 RU.
- 100 Gbps (QSFP28), 40 Gbps (QSFP), 25 Gbps (SFP28) and 10 Gbps (SFP+) switches with granular port densities.
- StackWise® virtual for core/aggregation placement, ISSU, NSF/SSO, hot patching, FRU redundant platinum-rated power supplies and fans.
- Supports advanced routing and infrastructure services.

Cisco Catalyst 9600 Series switches are our leading modular core/aggregation enterprise switching platform. Industry leading 100G/40G/25G density for business critical Enterprise campus core.

- Delivers up to 25.6 Tbps/chassis.
- 100 Gbps (QSFP28), 40 Gbps (QSFP), 25 Gbps (SFP28), 10 Gbps (SFP+) and 1 Gbps (SFP) switches with granular port densities. (50G/400G ready).
- StackWise® virtual for core/aggregation placement, ISSU, NSF/SSO, hot patching, FRU N+N/N+1 redundant platinum-rated power supplies and fans.
- Supports advanced routing and infrastructure services.

Cisco Catalyst 9800 Series wireless controllers come with built-in security: secure boot, runtime defenses, image signing, integrity verification and hardware authenticity that detect any threat and defends against any compromised infrastructure.

Three deployments options, Appliance-based controllers, cloud-based controllers and embedded controller on Catalyst 9000 family of switches.

### Cisco Services

Successfully deploy, manage, and support Cisco Catalyst 9000 family products with a full life cycle of services including implementation, optimization, technical, managed and training services. Our team of experts can help you speed deployment, reduce costs and minimize risk as you introduce new hardware, software and protocols into the network. [Learn more.](#)

### Intent-based networking

Networks are at the heart of the unstoppable evolution to a digital economy. Digitalization is changing the way businesses, partners, employees, and consumers interact at an unprecedented pace. Products and services can be customized, ordered and delivered at the click of a button using web-based applications.

Business data can be acquired, analyzed and exchanged in near-real time. Geographic boundaries between businesses and consumers are diminishing. And the network is at the center of communication to and between the applications driving the digital economy.

As foundational building blocks for the intent-based Cisco Digital Network Architecture, the Catalyst 9000 family has been built with security, mobility, cloud and IoT at its core.

### Upgrade path

Like many of its predecessors, the Cisco Catalyst 9000 portfolio leverage the strengths of the Cisco Unified Access™ Data Plane (UADP) Application- Specific Circuit (ASIC). With the latest generation of the UADP ASIC, Catalyst 9000 products deliver twice the performance with comparable pricing while adding a host of new features and functionality.

The Catalyst 9000 family is also the first in the line to offer more flexible licensing options. Cisco DNA Premier, Advantage and Essentials subscription-based software licensing lets you purchase the features and capabilities you need.
