

Cisco® Unified Communications Widgets is a suite of applications that deliver productive and personalized user experience with Cisco Unified Communications applications and Cisco Unified IP Phones. With these free-to-download and easy-to-add Cisco Unified Communications Widgets, you can streamline business communications and instantly access rich Cisco Unified Communications to have a tailored and familiar collaboration experience in every workspace.

Phone Designer is a free-to-download Cisco Unified Communications Widget for Cisco Unified IP Phones that brings a new level of personalization to business communications in the office. With a few mouse clicks, you can quickly customize your Cisco Unified IP Phone display with wallpaper of your choice and create or change your ring tones to a preferred melody.

Personalize Business Communications with Phone Designer Application

Whether it is changing wallpapers and screen savers on computer monitors or being able to download the latest ring tones to mobile phones, business professionals often want to add a personal touch to their business communications experience.

The desire for personalized business communications is especially strong among next-generation business professionals entering the workforce. These young business professionals are accustomed to tailoring their personal communications on social networking sites or mobile phones and they want similar capabilities in the workplace.

Unlike wallpapers on computer monitors that are normally hidden by desktop applications or screen savers that are commonly displayed while users are away from their desks, the vibrant Cisco Unified IP Phone color display provides an always-on alternative. Phone

Designer allows you to use personal pictures for your Cisco Unified IP Phone color display (Figure 1).

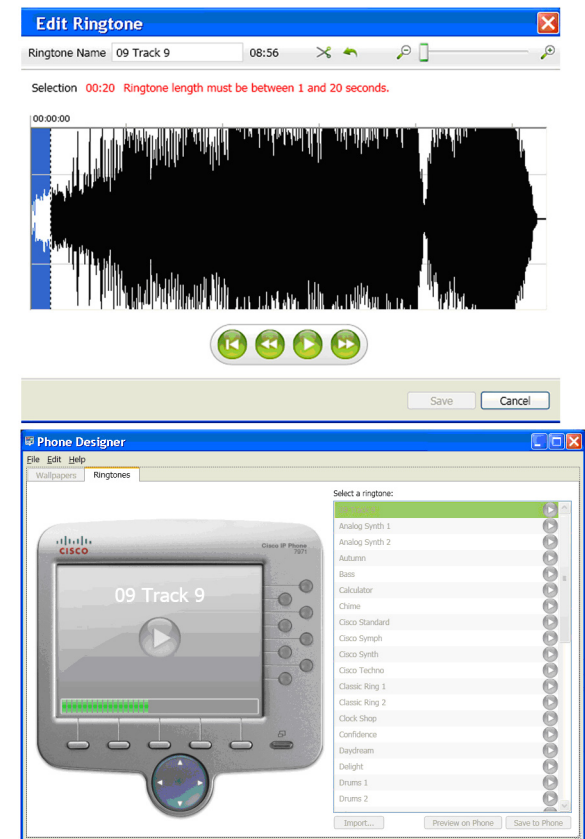

Figure 1. Customize Cisco Unified IP Phone Color Display with Phone Designer

As businesses and organizations move toward open office environments to promote teamwork between co-workers, having a unique ring tone on your Cisco Unified IP Phone can help you quickly determine when someone is trying to call your desk phone. Whether you are walking back to your cubical from a meeting or white boarding in a neighbor's cubical, you need to react only to business calls directed to your phone distinguished by your personalized ring tone.

With Phone Designer, you can customize your ring tones by choosing from a standard list of tones included with the application. Alternately, you can select a favorite melody from your MP3 music collection and uploaded it to your Cisco Unified IP Phone (Figure 2).
