

The Cisco Aironet 1815: Which One Is Right for You?

The Cisco Aironet® 1815 Series Access Points comprise four separate low-cost, sleek access points that are ideal for organizations that want to keep pace with ever-changing wireless demands but have budget restrictions. These access points minimize total cost of ownership but still deliver the features and functions that make Cisco different from our competitors:

All of these 1815 Series access points are 802.11ac Wave 2-compliant; they are simple to set up and, with Cisco® Mobility Express, easy to manage.

The four different access points are geared specifically for different environments. Which one is right for you? Consider the following:	
 <p>Do you need: Indoor Wi-Fi coverage for your small-to medium-sized business or organization? → A device that's quick to setup and reliable to forget it's there → Choose the 1815i.</p> <p>This access point is perfect for organizations in any industry that want to provide enterprise-level networks at a fraction of the cost.</p>	 <p>Do you need: Indoor Wi-Fi coverage for multi-dwelling units such as dorms, hotels, and assisted-living facilities? → The AP to be mounted to a wall securely and discretely? → Choose the 1815w.</p> <p>This access point can securely adhere directly to the wall, and with its sleek design, it's practically invisible. It is perfect for hospitality, residential halls, or other multi-dwelling units.</p>
 <p>Do you need: Indoor Wi-Fi coverage for your remote office or in a micro-branch office? → A device that easy to set up and provides the same features and connectivity that the home office has? → Choose the 1815t.</p> <p>This access point is for teleworkers and micro-branch office deployments regardless of particular industry. No longer will geography or elements get in the way of workplace productivity.</p>	 <p>Do you need: Indoor Wi-Fi coverage? → With a premium on coverage rather than capacity? → Need to upgrade its wireless network but is worried about profitability? → Choose the 1815m.</p> <p>This access point has more power than the other 1815 access points. Its network reaches a larger area and is perfect for budget-conscious organizations that need a wide coverage zone.</p>
