

What is Cisco Aironet Developer Platform All About?

The Cisco® Aironet Developer Platform framework is a programmable development platform designed to help you get the most out of your network. Aironet Developer Platform provides an opportunity for you to develop specific applications for your business while using the existing footprint of your wireless network and Cisco Aironet® access points.

Where can I find help if I need it?

Cisco isn't going to leave you without a map. Help can be found on Cisco DevNet. DevNet—Cisco's development program, found at <https://developer.cisco.com>—and its communities are packed with instructions and developer topics such as:

- Sample code and applications
- Learning labs and documentation
- Tutorials
- The DevNet Sandbox, where you can virtually test code for common use cases
- Knowledge base and technical support available through the DevNet community and forums

With Cisco Aironet Developer Platform, all you need is the imagination to turn a solution into reality.

What does Aironet Developer Platform do?

- Aironet Developer Platform gets your wireless network ready for the future. The ability to create applications that run on your network and are specifically built for your needs is powerful. Grow and meet your business needs.
- Aironet Developer Platform addresses the challenges of mobility and Internet of Things (IoT) convergence. The explosive growth in IoT-based devices has amplified the need for a converged wireless connectivity solution.
- The Aironet Developer Platform developer program allows you to offer best-in-class Wi-Fi and a development platform to address customer-specific use cases.
