Cisco Security Advisory Services
Security Compliance

Secure Your Business Through Compliance

Organizational risk profiles have expanded beyond internal perimeters and now include exposure from customers, partners, vendors, and BYOD programs with access to enterprise assets. Compliance is increasingly important in the face of frequent regulatory changes to requirements as businesses try to keep up with the ever-changing technology landscape.

Compliance is a critical component of any risk management program and, with the ever-increasing frequency of regulatory changes, sometimes quite daunting. Whether a global corporation, a cloudbased service provider, or a small business, compliance with the Payment Card Industry Data Security Standards (PCI DSS) is critical for any organization that accepts credit cards.

Stay Ahead of the Curve

Cisco® Advisory Services help organizations understand their information technology and operational processes in relation to various regulatory and industry requirements. We help to document processes, identify programmatic and technological gaps, and develop roadmaps to achieve the desired compliance goals. Our compliance services focus on assisting organizations to achieve compliance in the most cost-conscious manner.

Benefits

- **Understand PCI Requirements**
  Understand the complex set of PCI requirements for IT and operations processes

- **Roadmap for PCI Compliance**
  Get expert advice and support to bridge the gap between existing practices and what is required for PCI certification compliance

- **Satisfy PCI Reporting Requirements**
  Ensure all timing and reporting requirements are understood and met

- **Leverage PCI for Broader Security Maturity**
  Perhaps most importantly, leverage the investment in PCI compliance to reduce risk and ensure a more secure environment for your organization business strategy

Case Study
Global Cloud Platform Provider

Challenges

- Speed of adoption slowed by compliance concerns

- "Audit fatigue" for internal subject matter experts participating in multiple regulatory audits

- Requirement to quickly get cloud platform services PCI compliant

Solution

- PCI readiness assessment followed by PCI Report on Compliance (RoC), using FedRAMP and SOC 2 audits to reduce interviews

- Developed customer-facing documents to clarify whether provider or end client is responsible for each PCI requirement

Outcome

- Increased market traction because of PCI compliance

- Faster adoption because of clearer customer guidance

- PCI now aligned with all other regulatory audit cycles

Security Compliance Services

Payment Card Industry Data Security Standard (PCI DSS): Satisfy compliance requirements and identify potential risks to sensitive data through readiness assessments and preparation for Reports on Compliance (RoC)

HIPAA/HITECH Readiness Assessment: Determine adherence to the requirements of the HIPAA security rule, with the additional relevant requirements of the HITECH Act.

Seasoned Professionals

As strategic and technical advisors, the Cisco Security Advisory Services team helps leading organizations identify strategic opportunities in information security. We help you protect network performance, create competitive advantage, and capture long-term sustainable business value. Backed by a superior combination of resources—vast research and threat intelligence, mature methodologies, and multidisciplinary experts across security, cloud, mobility, collaboration, and data center operations—our customers achieve strategic IT and business objectives.
