Cisco Security Advisory Services
Security Strategy

Flexible strategies grounded in expertise

Security stakeholders are faced with increasingly complex decisions and trade-offs between the opportunities presented by new and innovative technologies–and the risks that these opportunities might present. This gives rise to questions such as "How do I stay up to speed with innovating technologies without putting our critical assets at risk? How do I stay secure in a dynamic threat landscape where attacks are adapted as fast as the technology itself?"

At Cisco, everything we do is built on the foundation of proven governance frameworks and strategies. Cisco® Security Advisory Services help ensure your security is aligned with industry best practices and business objectives.

Cisco Security Strategy and Program Development Services help you develop a security strategy and program to reduce risk to information and technology assets. We assess your current security program and assist in the development of an overall information security strategy based on applicable industry best practices and regulatory standards. We provide an objective view of current and planned security resource allocation to ensure the alignment of security investments with business strategies. Once you understand the risks inherent in your applications, endpoints, and networks, we help you proactively and holistically address vulnerabilities with consolidated processes, policies, and controls.

Benefits

- **Robust program development**
  Ensure that effective and comprehensive programs are in place

- **Understand emerging threats**
  Proactive threat management for new and evolving threats

- **Anticipate Vulnerabilities**
  Identify and mitigate the most common vulnerabilities before they become problems

- **Prioritize Business Needs**
  Organizational alignment between security resources and investments and business strategy

Case Study
International Department of Defense

Challenges
· Improve security risk posture

· Enhance security governance and control

· Address cybersecurity threats

Solution
· Custom consulting service to address unique customer strategic requirements.

· Information security awareness program and management system based on ISO/IEC 27001:2005

Outcome
· Unique information security management system customized to requirements

· Improved security risk posture

· Superior security program governance and sustainability

Our Services

Security Strategy Program Development: Develop security strategy and programs that protect enterprise data and IT assets while preserving operational agility.

Vulnerability Program Management: Utilize expert methodology and process to actively detect, prioritize, and remediate vulnerabilities against evolving threats.

Seasoned Professionals

As strategic and technical advisors, the Cisco Security Advisory Services team helps leading organizations identify strategic opportunities in information security. We help you protect network performance, create competitive advantage, and capture long-term sustainable business value. Backed by a superior combination of resources—vast research and threat intelligence, mature methodologies, and multidisciplinary experts across security, cloud, mobility, collaboration, and data center operations—our customers achieve strategic IT and business objectives.
