There are 2 kinds of organizations:

Those who have been breached

Those who don’t know they’ve been breached

Data records are lost or stolen at the following frequency

- **5.1M** Records Every Day
- **212k** Records Every Hour
- **3k** Records Every Minute
- **59** Records Every Second

### 5 Steps for Breach Readiness and Response

#### Get proactive. Start working on your incident response plan.
- Who should you alert? What are their phone numbers? Where are your backups?
- Systems without disrupting operations?

#### Secure access to the internet as a first line of defense.
- Secure access wherever users go, even off the VPN.

#### Protect your endpoints as a last line of defense.
- Prevent attacks, and detect, contain, and remediate if malware evades defenses as a last line of defense.

#### Test your plan before the hackers do.
- Not just that the technologies are working, but that your processes do the job, and that your people know what to do. It’s only by actually going through the steps that you realize where the gaps are.

#### Don’t panic. Breaches are inevitable.
- Don’t kid yourself that you won’t be attacked, or that you won’t be breached. When you know you have a thorough plan and the right technology, you’re able to take a deep breath and avoid the damage that panic causes. If you do require emergency assistance, our responders can be at your site within hours, and our incident commanders have access to information and data breaches to get you back in business. Fast!
