5 Steps for Breach Readiness and Response

Get proactive. Start working on your incident response plan.

Who should you alert? What are their phone numbers? Where are your backups and how do you restore them? What steps do you take to isolate affected systems without disrupting operations?

Test your plan before the hackers do.

Not just that the technologies are working, but that your processes do the job, and that your people know what to do. It's only by actually going through the steps that you realize where the gaps are.

Don't panic. Breaches are inevitable.

Don't kid yourself that you won't be attacked, or that you won't be breached. When you know you have a thorough plan and the right technology, you'll be able to take a deep breath and avoid the damage that panic causes. If you do require emergency assistance, our responders are available within hours to begin work virtually before they travel onsite to remediate any data breaches to get you back in business. Fast!
