Cyberattacks are happening right now. Can your outdated security tools stop them?

You need security tools that can...

- Stop threats at the edge
- Control who gets on your network
- Find and contain problems fast
- Protect users wherever they are

An integrated ecosystem of tools helps you catch threats faster. See a threat once and then stop it everywhere.

Enable these business outcomes today

Here’s what you need

**Cisco Next-Generation Firewall and NGIPS**
Upgrade from Cisco ASA and IPS

- Prevent breaches by blocking known and emerging threats. Get the most comprehensive and deepest visibility into threats across users, hosts, networks, and infrastructure.
- The most advanced threats can evade even the best prevention tools. Go beyond prevention to detect and eliminate threats that manage to get inside. Cisco AMP will continuously inspect file behavior to catch stealthy threats, and Cisco Stealthwatch will detect malicious patterns in encrypted traffic.

**Cisco AnyConnect 4.0 and Identity Services Engine (ISE)**
Upgrade from Cisco AnyConnect 3.x and Cisco ACS

- With AnyConnect and ISE, ensure that only authorized individuals and supported systems can connect to your network remotely. They work with Cisco Umbrella to protect users even when VPN is off.
- Blocks risky sites, spam, phishing attacks, and malicious email attachments before your users can be victimized - from the cloud or on-premises.

**Cisco Identity Services Engine (ISE) with TrustSec**
Upgrade from ACS and add the power of TrustSec

- Simplify access across wired, wireless, and VPN connections. Policies are cascaded across all types of access points and automatically enforced by Cisco TrustSec software-defined segmentation.

**Cisco Web/Email Appliance x90 and Cisco Umbrella**
Upgrade to new Cisco WSA and ESA, and check out cloud-delivered protection from Umbrella.

- Protect Users Whenever They Are

Cisco Security solutions work together in an integrated ecosystem to make security more effective.

Cisco Talos threat intelligence powers our entire security portfolio.
