

Cisco Secure Data Center Advisory Service

Accelerate your Secure Data Center Transformation

The data center of today is dynamic yet complex. The constant evolution of new infrastructure, applications, distributed systems, and users has made the demands on the data center acute. Added to that is the heightened need for security. No matter where the data center is hosted, customers need to feel assured that their mission critical information is secure, their data is protected, and they can identify IT and security vulnerabilities proactively. Moreover, security for the data center must evolve to enable greater visibility, simplified segmentation, and stronger threat protection.

To accelerate data center security, enhance visibility, simplify segmentation, and reduce risk, look to Cisco's Secure Data Center Advisory Service. We focus on assessing your current business, compliance and technical environment; identifying key IT and security challenges, and recommend a prioritized implementation roadmap aligned to broader business goals and strategy.

Next Steps
