Cisco Security Awareness

Flexibility and Support

Cisco Security Awareness provides flexibility and support to effectively deploy your phishing simulations, awareness training — or both — and measure and report results. Empower your security operations team with the ability to focus on real time threats and not end user mitigation. Our product provides the education that helps employees to work smarter and safer.

High-quality content is central to any security awareness program and a pre-requisite to provide a training experience that is fun, compelling and relevant. Our content is developed by a team of experts using a proven pedagogical approach and methodology for adult learning that ensures the highest degree of engagement. Your users will learn about cyber security in a way that expands user knowledge and increases their affinity for your organization to help protect it.

Key Reasons To Invest in Cisco Security Awareness

• People influence security more than technology or policy and cybercriminals know how to exploit human behaviors.
• No security system can be 100% effective in detecting all incoming threats. Increasing security awareness plays a critical role in an organization’s overall security and risk posture.
• Security and risk management leaders (SRM) should invest in tools that increase awareness and influence behavior that supports security business objectives through computer-based training.
• SRMs leaders must understand the diversity of people in an organization and approach security awareness training with personalization.

Reap the benefits

Partner with a security awareness expert and leverage domain expertise including CISO coaching to develop your security awareness strategy:

• Analyze your organization’s security awareness needs and set strategic objectives
• Plan your awareness program including phishing simulation, awareness training, communication and reinforcement plan
• Optimize program performance by setting and measuring against strategic metrics and KPIs

Key Trends in Security Awareness Training That Are Driving Long-Term Behavioral Change

**High Quality Content:** Security training cannot effectively be approached with a “one-size-fits-all” approach. Content that varies in format and length promotes better participation and retention rates.

**Intuitive Phishing Simulator:** Out of the box phishing scenarios that reflect real-life cyber and phishing threats are integrated with training for just in time feedback.

**Multilingual Content and Platform:** Out-of-the-box language support (narration and text) support global security awareness programs.

**Communications and Reinforcement Materials:** Large libraries of predesigned content and templates for internal campaign promotion and content reinforcement; including videos, posters and newsletters.

**Consultative Approach:** Our approach incorporates unique offerings including CISO coaching, managed services and content customization.
